—According to a writer in a recent number of the *Temps*, private theatricals in all their gradations are now in special favor in Paris. Not only are artists of distinction, frequently the *sociétaires* of the Comédie-Française, seen in private houses, but the most distinguished dramatists themselves assist in putting their works upon the stage there, as they would for a first night at the theatre. M. Alexandre Dumas has been superintending at one house the rehearsals of two of his own plays, one of which is still unacted; at another M. Henri Becque is the stage manager; at still another it is M. Sardou who directs the performances of a *théâtre de société*. To judge from the tone of the brilliant little article, these Academicians and dramatists are in a position no more agreeable than that of those daring persons on this side of the Atlantic who undertake the same ungrateful task. It is not every *impresario* who has Voltaire's superb satisfaction with the performances of his own plays, by his own friends, on his own private stage. He never seems to have found that the beautiful and gracious young women, the brilliant and gallant gentlemen of the little society he gathered at Ferney, lost anything of their grace and charm and courtliness upon the stage; but what modern stage-manager of a society theatre ever had such ideal actors as Voltaire thought he had, or such an ideal imagination for the position, as he who could see in Mme. Denis, his niece, fat, commonplace, old, and homely, a tragic actress capable of surpassing Mlle. Clairon in "Zaïre" and in the "Orphélin du Chine"? Our contemporaries in both hemispheres, on the contrary, seem too often to find the expressive faces and graceful manners of their acquaintances converted into stolid masks and wooden awkwardness upon the stage, while their unconscious incapacity to embody the feelings and actions of the characters they represent makes of private theatricals everywhere, in the words of the writer in the *Temps*, "one of the most tempting and most dangerous of luxuries"; tempting, and, it may be, agreeable for those who undertake the acting, but often exceedingly trying to those who have to witness it.

— Economic science has suffered a severe loss in the death of Prof. F. X. v. Neumann-Spallart on the 19th of April last. There is all the more reason for regret because he was cut off in the fulness of his activity, being only fifty-one years of age. His whole life had been spent at Vienna, where, during his later years, he was at once professor in the University and member of the Aulic Council. He has written books on political economy, on Austrian commercial policy, agriculture, and maritime development. But his most important work, which has been more than once referred to in these columns, was his 'Conspectus of the World's Industry' (*Uebersichten der Weltwirthschaft*), published once every two years. Originally planned as a department of Behm's 'Geographisches Jahrbuch,' it soon grew into an independent work, and has come to be regarded as the best collection of current industrial statistics anywhere published. It excelled in accuracy, in clearness of arrangement, and in choice of matter while its full citation of authorities made t easy for the specialist to verify its statements, or to pursue his inquiries into further detail. The last number appeared almost exactly a year ago. The high reputation of the author is indicated by his position as Vice-President of the International Statistical Institute. It is doubtful whether in the department of general statistics of industry he has left an equal behind him.

—The work of Dr. W. Söderhjelm, 'Petrarca in der deutschen Dichtung,' published at Helsingfors, originally appeared (1886) in the transactions of the Finnish Academy of Sciences. It reviews the influence of Petrarch upon German poetry, but is brought down only to the date of A. W. Schlegel's translation of a selection of the sonnets and canzoni, to the consideration of which much space is given. A comparison of the various issues of these versions—first in the 'Göttinger Musenalmanach' (1790–94), and Becker's 'Taschenbuch für geselliges Vergnügen' (1794–95), and then in the collection, 'Blumensträusse der italienischen, spanischen, und portugiesischen Poesie' (1804)—shows how diligent was Schlegel's use of the file, and how his appreciation of the Petrarchan sonnet-form grew. Dr. Söderhjelm underestimates, it seems to us, the influence exerted upon German style and sentiment by the early translations from Petrarch's Latin works. The versions of Niclas von Wyle, Steinhövel, Spalatin, and Vigilius were too much read in the fifteenth and sixteenth centuries—as their many printed editions prove—not to have had their due weight. Steinhövel's rendering of the Boccaccio-Petrarch tale of 'Griseldis'—known in English popular literature as 'Patient Grissel'—was the favorite "chap-book" of its day, and almost the first illustrated German work. This story, as every one is aware, passed into all literatures at a very early date. Mr. V. Promis, Librarian of King Humbert's private library at Turin, has lately issued a few copies, in phototype reproduction, of an Italian paraphrase of it, in 82 *ottave*. The original was printed in the closing years of the fifteenth century, and the copy in the King's collection is most likely unique. It is in folio, and is entitled 'Historia celeberrima di Gualtieri Marchese di Saluzzo, il quale elesse di maritarsi in Griselda contadina.' The exact date and place of printing are unknown.

AUBREY DE VERE'S ESSAYS ON POETRY.

Essays, chiefly on Poetry. By Aubrey de Vere. 2 vols. Macmillan & Co. 1887.

It is rare good fortune to find criticism in which the ideas are more excellent than the manner, and the spirit finer than the ideas; in which it is not the keener sympathy of the poet that speaks, or the sure sense of the trained artist for expression, or any single faculty, but the whole nature of the man; in which the judgment rendered does not proceed from any particular part of his mind—the scholarly or moral or æsthetic element by itself—but is felt to be grounded upon his total convictions These essays of Aubrey de Vere, therefore, are worth more than ordinary attention. He writes principally of Spenser and Wordsworth, and also of Milton, Shelley, and Keats. Taken together, the essays are a fragmentary survey of the course of English poetry, apart from the drama, in its highest ideal and lyrical achievements. He considers mainly the doctrine of this poetry, and his being a Catholic adds a subordinate interest. He is a Christian idealist, and he refuses to regard poetry except in the light of those great ideas which belong to the spirit, and, being nobly and beautifully interpreted, are the substance of the poets who live by their wisdom as well as by charm. The ethical, the philosophical element in a large sense, is to him the engrossing thing; and criticism of this sort, so incited and so aimed, has a reality that does not fall far short of the worth of direct reflection upon the things of the mind, though it deals with them through the medium of literature instead of in life itself.

With Spenser, naturally, he has many affinities. The mediævalism, the sentiment of chivalry, the allegorizing spirit, and not less the Puritan elevation of the first of the Elizabethan poets, exercise a special fascination over a Catholic mind for whom the Ages of Faith, as he likes to call them, have in a peculiar degree the ideality that clothes the past. One no longer looks for original criticism of the father of English verse, who, more than Chaucer, may claim the paternity of great poets in later days; but to remind us of his excellence has become, in the lapse of time and the decline of poetic taste, almost as desirable an office as it once was to unfold its secret. Spenser is a poet who requires no common critic to speak justly of him. His position was a unique one, and by some infelicity of his stars he failed to rise to the greatness which seems to have been possible to him. Aubrey de Vere remarks that the great romantic poem of the Middle Ages, one that should sum them up on the human as Dante did upon the divine side, was never written; and, looking back, it appears to us that Spenser was the choice spirit that missed this destiny. His pure poetic quality, that sensibility to beauty and delight in it as in his element, was perfect to such a degree that Milton and Keats, who possessed it in something of the same measure, seem almost to have derived it from him, whose poems nourished it in them. The sweetness and noble ease of his expression reveal the presence of a marvellous literary faculty. His responsiveness to the historical and legendary elements in the past, his power of abstracting and idealizing them for poetic use, and his profound interest in human life, were great endowments, and he possessed in a

high degree and a pure form that moral reason which is the attribute of genius. But by defects as striking as this gift he made his poem less than we fondly think it might have been. The Elizabethan prolixity, the obscure perception of the nature of form in literary work, the artificiality incident to the allegorizing temperament, account for much of what he lost; but, for all that, his poems are marvels of the creative intellect, and it is this intellect that Aubrey de Vere dwells on. Any one can point out Spenser's loveliness, but the great spirit that brooded over his verse is not so easily realized. His aim was "to strengthen man by his own mind," and it is this effort which the critic analyzes, and by so doing tries to show how well he deserved the epithet "grave" as well as "gentle Spenser." The criticism goes much into detail, and uses the method of profuse citation, but it never loses grasp of the poet as a whole, and succeeds in a difficult task; for Spenser is even more full of anachronisms now than in his own day, and sympathetic understanding of these, and the power to find under them a living man like unto ourselves, are rare. It seems to us that Aubrey de Vere hits the truth about the man, and comes closer to his spiritual nature than any writer whom we remember on this subject.

One does not read far in these two long essays without becoming aware that the author is himself of a contemplative mind, and has perhaps a stronger hold on the abstract than on the concrete, so that he cares very much more for the doctrine than for the dress of the poet, and is more exacting of moral wisdom and spiritual truth than of art for its own sake. This helps him over the poetically dry places in Spenser, and it serves him even better in the case of Wordsworth. We do not regard this so much as a fault as choosing the better of two alternatives; for, if the landscape of Arcady is incomplete for him unless there is some "swan-flight of Platonic ideas" over it, such as he says is always in Spenser's sky, he has an appreciation for beauty as steadfastly as for the higher truths of life, and it is better to suffer with deficiencies in poetic art for the sake of the matter than to be content with art alone. He is a thorough Wordsworthian, and it is not surprising that a writer of his temperament is annoyed by the charge that Wordsworth is destitute of "passion." He has much to say on this point. Wordsworth himself gave as the reason why he did not write love-poems the fear that they would be too passionate. Aubrey de Vere makes what defence he can by pointing out the half-dozen idealizations of woman in the shorter lyrics; but his real apology consists in the counter-assertion that Wordsworth is especially distinguished for "passion." He uses the word, however, with a difference, and means by it the poetic glow, the exaltation of feeling, the lyrical possession, which attends the moment of creation and passes into the verse. Of this sort of passion every form of poetry is as capable as is the amorous: the *sæva indignatio* of satire would come under this head as properly as the moral enthusiasm or the patriotic fervor shown in the "Ode to Duty" or the Sonnets. Wordsworth truly possessed this capability, and it gives to his poems their masculine strength. Whether equal success is to be credited to his critic's glosses upon the more commonplace subjects of Wordsworth's muse, is doubtful to us; it seems rather that he makes the mistake which Coleridge attributed to Wordsworth himself, of giving a value to the idea which it has in his own mind, but which it does not have in the bare words addressed to the reader. When the idea and the expression are not identical, every poet suffers from this cause; in his mind the idea, coming first, dignifies the words, but to the reader the words, coming first, too often mutilate the idea. It is a good result of Aubrey de Vere's Wordsworthianism that it gives him courage to force into the front of his essay the "Orphic Odes," which are among the least known of the poet's work, and contain some of the noblest of his lines. He knew Wordsworth, and he records a piece of youthful irreverence on his part, when, once being in London with him, he knocked at a door, and, no one coming, he remarked:

"Dear God, the very houses seem asleep."

It appears very venturesome to us, but the old poet condescended to smile.

To Milton he seems to us somewhat unjust. The earlier poems receive his warm appreciation, but of the later ones he is hardly so tolerant, and nowhere does he give him his due. We will quote the passage:

"It is not, however, its deficient popularity so much as its subject and its form which proves that Milton's great work is not a national poem, high as it ranks among our national triumphs. Some will affirm that he illustrated in that work his age if not his country. His age, however, gave him an impulse rather than materials. Puritanism became transmuted, as it passed through his capacious and ardent mind, into a faith Hebraic in its austere spirit—a faith that sympathized indeed with the Iconoclastic zeal which distinguished the anti-Catholic and anti-patristic theology of the age, but held little consort with any of the complex definitions at that time insisted on as the symbols of Protestant orthodoxy. Had the Puritan spirit been as genuine a thing as the spirit of liberty which accompanied it; had it been such as their reverence for Milton makes many suppose it to have been, the mood would not so soon have yielded to the licentiousness that followed the Restoration. . . . To him the classic model supplied, not the adornment of his poem, but its structure and form. The soul that wielded that mould was, if not exactly the spirit of Christianity, at least a religious spirit—profound, zealous, and self-reverent—as analogous, perhaps, in its temper to the warlike religion of the Eastern Prophet as to the traditional faith of the Second Dispensation. Such was the mighty fabric which, aloof and in his native land an exile, Milton raised; not perfect, not homogeneous, not in any sense a national work, but the greatest of all those works which prove that a noble poem may be produced with little aid from local sympathies, and none from national traditions."

Some expressions in this passage, and many others scattered through these volumes which we do not quote, indicate where the current of sympathy was broken, by default of which Milton has failed to be understood. Ideal he was, but there is no poet who is more bone and flesh of the English nation in the substance of his genius, and in whom it developed a spirituality more noble; nor are his defects, in his conception of womanhood for example, such as cannot be easily paralleled from the other poets of highest genius in the line from Spenser. But, on the other hand, the critic is more than just to Keats, and towards Shelley he exhibits a respect, a penetration of the elements of his thoughtful temperament, and a comprehension of the remarkable and intimate changes of his incessant growth, that are almost unexampled in authors writing from Aubrey de Vere's standpoint.

We must make room for some original remarks of the writer upon the Pagan element in our modern poetry—by which we do not mean "Neo-paganism." He is very well affected towards Platonism, and recognizes it historically as "the chief secondary cause of the diffusion of Christianity, doing for it more than the favor of Constantine could ever have done." He thus affirms for Greek religion and Greek philosophy "an element of greatness and truth." Our poets, in returning to its life and thought, seem to him to be making a return to the spiritual element which in the revolutionary ages has been obscured and too often lost. He speaks in this as a Catholic, but he is more Christian than Catholic, if we may be permitted to say so; and all religious writers admit and lament the inroad of skepticism and consequent materialism. The turn he gives to these facts is a striking one:

"The arts of the Middle Ages soared above Paganism: the imaginative mind of modern times stands for the most part aloof from it; but it often stands aloof from Christianity also. Secularity is its prevailing character, while even in Paganism there is a spiritual element. We may not, without a risk of insincerity and presumption, indulge in either an exultation or a regret higher than corresponds with our low position. Can we with truth say that the portion of our modern literature which reverts to ancient mythology is less religious than the rest? Is it not, in the case of some authors, the only portion which has any relations, even through type or symbol, with religious ideas? Would Dante, would even Milton, have found more to sympathize with in the average of modern literature than in Homer or in Sophocles, in Wordsworth's 'Laodamia' or Keats's 'Hymn to Pan'? What proportion of our late poetry is Christian either in spirit or in subject—nay, in traditions and associations? Admirable as much of it is, it is not for its spiritual tendencies that it can be commended. Commonly it shares the material character of our age, and smells of the earth; at other times, recoiling from the sordid, it flies into the fantastic. . . . It is our life which is to be blamed; our poetry has been but the reflection of that life."

We quote this not only for its suggestion, but because it sums up and speaks out plainly the protest which is implicit in all this criticism. The æsthetic lover of beauty, the artist who is satisfied with feats of poetic craft, will not find anything to his liking in these volumes. They are presided over by a severe Platonism intellectually, by an exacting and all-including Christianity when the subject touches upon man's life, and they will prove somewhat difficult reading, perhaps, because the thought continually reverts to great ideas, to that doctrine of life which the author seeks for in the poets, and prizes as the substance of their works. But it is good in poetic days like these to be brought back to the more serious muses which inspired the great ideal works of our literature, and to converse with them under the guidance of such a spirit as fills these essays—of which we have noticed but a comparatively small portion—with a sense of the continual presence in great literature of the higher interests of man, his life on earth, and his spiritual relation to the universe. These essays contain the fruits of habitual familiarity with poetry, the convictions of a lifetime with regard to those things which are still important subjects of thought to thoughtful men; and there is, mingled with the style, the sweet persuasiveness of a refined and liberal nature, which is only too well aware that it must plead its cause, and pleads with strength and charm.

THE INSCRIPTIONS OF ASIA MINOR.

The Wolfe Expedition to Asia Minor. By J. R. Sitlington Sterrett, Ph.D. (Papers of the American School of Classical Studies at Athens. Vol. III). 8vo, pp. vii, 448. With two maps. Boston: Damrell & Upham. 1888.

THE solid fruit of the American School of Classical Studies at Athens, founded by the American Institute of Archæology, is beginning to appear, and justifies the policy which calls for a permanent director. One and another director has gone out for a year, to brush up his knowledge of modern Greek, in one or two cases with no interest in archæology, and the

fruit of their work has been very meagre. Apart from Bulletins, two short papers (included in the two volumes of miscellaneous papers published in 1885 and 1888) represent the special studies of these directors. Dr. Sterrett, however, was connected with the School, either as pupil or Secretary, from its beginning until he lately accepted a professorship in Miami University. As the result of his prolonged connection, and still more of his unbounded enthusiasm, we have his publication of the Inscriptions of Assos and Tralleis, in the first volume; this third volume, with 651 inscriptions, mostly hitherto unpublished; and the second volume, also filled with new inscriptions collected in Dr. Sterrett's epigraphical tour in Asia Minor the previous year, and which is announced as in press. This great work, with the very important chorographical work connected with it, which has reconstructed the map of some of the least known regions of Asia Minor, presents us with a mass of original research which, so far as classical topography and epigraphy are concerned, exceeds all that has been given to the learned world by all other American scholars combined. We are not surprised at the enthusiasm with which, in these columns, Mr. Stillman presented the name of this young scholar as the true representative of American scholarship in the American School at Athens and in the East.

The present volume, most creditably produced under the auspices of the Archæological Institute of America, represents explorations made in 1885 in ancient Cilicia, Lycaonia, Isauria, and Pisidia. The chorographic work is represented chiefly by the two new maps by Kiepert. One need only compare these maps with the best previously issued, namely, Kiepert's great map of the Asiatic Provinces of the Ottoman Empire, to see that in many districts the map has been wholly created by Dr. Sterrett, from his original observations and measurements. His object was to visit an unknown region, precisely for the purpose of filling in its map and gathering its inscriptions; and the result is, that this region, from being one of the most unknown, has become among the best known. The volume gives no proper indication of the labor this must have cost. Compelled by the limited funds at his disposal (only a thousand dollars—and never was that sum better spent in the cause of ancient learning) to work economically, he travelled over a dangerous country, with no companion and no retinue except two tried native servants, a groom and a cook, and aided chiefly by his experience aud his knowledge of the Turkish language. He has thus done in good part for these provinces, and for Pisidia and Cappadocia, which will be the subject of his forthcoming volume, what Mr. W. M. Ramsay has so nobly and exhaustively done for Phrygia, and what the late Austrian expedition has been doing for Lycia.

The map of the district covered by this exploration has been enriched by fifteen or twenty ancient cities and towns, which have for the first time been located with certainty. Of these the most interesting, perhaps, is the Lystra of St. Paul's travels. It is on an ancient site called Zoldera, having an acropolis like an Assyrian *tel*, by the modern town of Khatūn Serai, about twenty miles south-southeast of Iconium. Its location is fixed by a Latin inscription on a large quadrangular pedestal at Zoldera, which reads: "Divum Augustum Colonia Julia Felix Gemina Lustra consecravit decreto decurionum." Another of the new discoveries, Artanada, has peculiar geological interest. It is near the small river Gök Su, which runs down a gorge and suddenly sinks under ground to reappear half a mile lower down. Scarcely has the Gök Su disappeared beneath its natural bridge before two other streams burst out from the mountain sides and enter what should have been its bed, and flow along till they fall in cascades into the river after it emerges to the light. The inscription which identifies the town very appropriately calls it "Αρτανάδα τῆς ποταμίας." Other towns identified are Ostra, Lalassis, Lauzados, Neronopolis, Gorgorome, Sedasos, Isaura Nova (an important town mentioned in a lately discovered fragment of Sallust), Anaboura, Minassos, Tymandos, and Plinna. To these may be added from the Appendix, containing a few inscriptions found on the Wolfe expedition to Babylonia, Aracha (modern Erek), and the discovery of Roman roads, both east and west of Palmyra, whose existence had never before been suspected.

Returning to Asia Minor, we have an account of a remarkable monolithic Hittite stele, twenty-three feet high and nine feet in diameter, found by Dr. Sterrett at Fassiller, containing figures in style like those of Euyük and Elflatun Puñar. If we may add a little interpretation and conjecture to the description given, there is figured a king standing between two lions, with his hands clasped over his breast. Directly over the king is his god, who corresponds to the Greek Herakles and the Babylonian Gisdubar. His right hand is held aloft, and grasps what may be a weapon, while under his left arm he holds what can be hardly anything else than a lion. We believe that this is the first time that this god has been found thus depicted on Hittite remains.

Of the additions these inscriptions make to Greek lexicography we need not speak. A large number of them are funerary, but others are larger and of especial interest. Such are Nos. 366-388, which give a long list of persons who came from various Pisidian towns, most of which are not known. Of more interest are the inscriptions which give instructions for the use of those consulting oracles. One long inscription from Anaboura gives the omens corresponding to various throws of the dice. Each throw has its tutelar god as well as its encouragement or warning. Another inscription contains the omens in an acrostic form. The person consulting the oracle was probably required to take at random out of a box a pebble inscribed with one of the letters of the alphabet. If, for example, his pebble was inscribed with *beta*, his oracle was "Thou shalt have the help of Apollo and of Fortune"; but if he happened to pick out *kappa*, or *xi* or *phi*, he had to be content with such answers as these: "The wave of the sea raves and rests," "You can't pick fruit from dry branches," "When you have done anything shabbily, you will begin by and by to blame the gods." These oracles are in verse, and so is No. 438, an interesting essay on Liberty, which tells us:

> "It is not one's ancestors that make a free man,
> For one Zeus is the father of all, and men have one root."

This may indicate what was the drift of the poem of Aratus from which we have Paul's quotation, "For we are all his offspring." After this advanced thesis the verses continue with a eulogy on Epictetus, who, though born of a slave mother, was an eagle among men and godlike in wisdom.

We are pleased to see frequent acknowledgment given for assistance, especially to Mr. Ramsay, who has since gone over a portion of this territory (in the Addenda there is a constant error of one in the references to the numbers of the inscriptions reëxamined by Mr. Ramsay), and to German and American scholars for help and suggestions in difficult points of restoration. Doubtless other corrections will have to be made, as where, on a milestone, No. 650, the numeral "xiii" it would seem should read xvii. But whatever emendations of readings may be made by scholars in their studies, they will recognize Dr. Sterrett as the first American to harvest in the field of epigraphy where Waddington, Ramsay, and others have done such notable work.

RECENT NOVELS.

Four Ghost Stories. By Mrs. Molesworth. Macmillan & Co.

Loyalty George. By Mrs. Parr. (Leisure Hour Series.) Henry Holt & Co.

Brinka: An American Countess. By Mary Clare Spenser. Spenser Publishing Co.

Mrs. Molesworth has written four pleasant little stories of family life, in each of which an attempt is made upon the genus wild ghost to capture a specimen, tame him, and lead him about with a string. The reader is left more interested in the rest of the story than in the ghost. It may, however, in such case be taken as a tribute to the author's tact in accessories that the "yo-heave-oh-ing," as Mr. Lowell has it, attracts more attention than the avowed object of the recitals. Of Mrs. Molesworth's four ghosts, only one appears with anything of warning or tragic portent. Two are irrelevant accidental ghosts, returning, one by force of habit to its earthly haunts, the other to look at a pet cup and saucer fallen into stranger hands; the third projects himself from a living being with the wholly benevolent intention of assuring a woman that he loves her, and of fixing her in that belief until the postal service can more fully explain his wishes. The Society for Psychic Research will find new features herein, and, while encouraging the practical and beneficent in ghosts, will frown (it is to be hoped) on a type of wraith who appears to little girls of twelve. This is an absolute novelty in returning shades, and not an agreeable one. The description of the terror that in each case seizes the ghost-seer is skilfully effected, and is all that saves the book from being cheerful and charming, for a sane and healthful spirit has done everything to make the apparitions' visits as comfortable as possible. The ordinary embellished ghost story is like a skull made into an ornament for a library table; these resemble rather a decorative metal wrought into the shape of a skull.

'Loyalty George' is a story of Devonshire coast life during the days succeeding the French wars, when "Bony" was the name which frightened naughty children into seemly behavior, when stories of the press-gang were memories as well as romance, and smugglers had little trouble to ply their trade. Scores of novel-writers have made the times and places familiar, notably Mrs. Gaskell, whose 'Sylvia's Lovers' will inevitably come to mind as one opens Mrs. Parr's book. But the times and places lend themselves to fiction so readily that one is only glad to meet them again, and 'Loyalty George' is in no sense an imitation. If we have with Mrs. Gaskell climbed these cliffs and looked upon this sea, hurried to the sands to see the fishing boats come in, hunted birds' nests in the rocky walls, pushing a way through gorse and bramble, listened to the sea stories of soldiers and sailors, and passed the time of day with fishwives, it is with a guide of a humor more subtle than even Mrs. Gaskell's that we walk the streets of the twin villages, Ferrers and Fairstoke, and sit at the villagers' tea-tables or listen to Mrs. Coode's private interpretation of Providence. The heroine, with her disreputa-

ble surroundings, is so sweet and loyal a vagabond that it is a pity she fixed her affections on a man who knew how to love better than to trust, and that so she had to be sacrificed to the needs of a tragic consistency. Dunchy, the deaf boatman, with his malodorous past and his wise affection for his little maiden friend, is a character to be put among the realities; so, too, the gentle Wesleyan minister; while Mrs. Coode is not unworthy of the hand that drew Sister Glegg and Sister Pullet.

Mr. Henry James describes one of his characters as a woman not beautiful, but who carried herself as if she were so. 'Brinka, an American Countess,' may be called a book which is neither good, witty, nor learned, but which exhibits itself with a complacent air of being all these, and more. Mr. James's heroine was justified by producing the effect of beauty, but 'Brinka,' less happy, imparts to the reader the last sting of irritation by its assumption of qualities conspicuously absent. The wit is thieves' slang, puns, and a particularly debased type of malapropisms; the learning flaps a noisy wing over every department of human research from botany to occultism; titles and riches which beggar Lothair gild the pages; and beauty, skin-deep, is borrowed from bonbon boxes. The morals of the book are irreproachable. There may be those who will like it.

Elementary Chemistry. By M. M. Pattison Muir, M.A., and Charles Slater, M.A., M.B. Cambridge, England: At the University Press; New York: Macmillan. 1887.

Practical Chemistry. By M. M. Pattison Muir, M.A., and Douglas Carnegie, B.A. Same publishers. 1887.

Meyer's Modern Theories of Chemistry. Translated from the German (5th edition) by P. Phillips Bedson and W. Carleton Williams. New York: Longmans. 1888.

THE senior author of the first two books in the above list has been one of the most outspoken critics of the methods of teaching elementary chemistry, and teachers of this branch of natural science will consequently examine with interest the results of his constructive efforts which are embodied in these two volumes. We may as well say at once that those who hope to find in them a solution of the difficulties which beset the teaching of elementary chemistry, will be disappointed. The two books are intended to be used together —the one to be read in connection with a course of lectures, the other to serve as a guide in the accompanying laboratory work. "Their object is to teach the elements of chemical science."

The 360 closely printed pages of the 'Elementary Chemistry' contain much valuable matter and excellent discussion of chemical theory, and might be read by an advanced student to advantage. But the book is designed for beginners; and looking at it from this point of view, our verdict must be that it presents an unsatisfactory and even impossible scheme. In the first chapter chemical change is discussed and illustrated by the aid of substances many of which are heard of by the beginner for the first time, while the familiar instances of chemical change in every-day experience are ignored. The student is plunged at the outset into a strange world, filled with unknown materials of extraordinary behavior. Further along he finds himself quite out of his depth, bewildered by the array of novel reactions and the conclusions drawn from them, and hardly in a state of mind to agree with the statement (p. 11), "Alchemy was a fascinating dream, but chemistry is a more satisfying reality." There is throughout the book an entire lack of contact with and reference to the chemistry of common life. Not till page 70, after discussion of such subjects as "Conservation of Mass" and "Laws of Chemical Combination," is the chemical study of water and air taken up. In short, the book is a study of chemical theory, and not an elementary chemistry in any ordinary sense of the term.

The same general criticism naturally applies also to the companion volume. This contains over 200 careful descriptions of experiments for the student's laboratory work, among which teachers will find much that is suggestive, though it would appear that in several cases the authors' experiments have led to unique results. In the preface to this volume we find this singular statement (the italics are ours): "The aim of the authors has been to arrange a progressive course of practical chemistry, in which *as the experiments become more difficult the reasoning becomes more close and accurate.*" As if loose and inaccurate reasoning should have any place in a text-book of science, and above all in one for beginners! Unfortunately, we find that the "reasoning" in both volumes is in many cases of a sort which this sentence would lead one to expect. Too often do we find such forms as this: "Assuming that the proofs are conclusive, and assuming that, etc., . . . the results of the present experiment teach, etc." This no student of logical mind will endure; he will be disposed to say, and justly: "Assuming so much, assume all, and give one the results without this laborious pretence of experimental proof." The cuts are rough, and the drawing in bad proportion.

By their translation of Dr. Lothar Meyer's 'Moderne Theorien der Chemie,' Profs. Bedson and Williams have placed American and English chemists under many obligations. In the original this standard work has reached its fifth edition, having been thoroughly revised and greatly enlarged since the appearance of the third edition in 1876. The translation is usually smooth and accurate, though we notice a few inexcusable misinterpretations. One, which must be particularly annoying to the author, is that which occurs at the end of the preface to the first edition, where he is made to say: "The merit of rendering a service to science by means of this book is equally shared by the author and the colleague with whom this subject has been frequently discussed." What he does say is: "Enthalten diese Mittheilungen etwas für die Wissenschaft verwendbares, so ist dieses nicht mehr mein Verdienst als, etc."—*i. e.*, "*If* this work prove of any service to science, etc."

Good Form in England. By an American. D. Appleton & Co.

Manners. Cassell & Co. 1888.

THE author of 'Good Form' seems to have spent so many years abroad that his mother tongue is no longer elastic enough to enable him to express his ideas clearly. Thus, in the short preface are to be found such phrases as *raison d'être*, *entrée*, *en bloc*, *au fait*, and elsewhere such a sentence as: "It is only individually that members of high society can recognize persons *dehors* its limits." And yet, at page 176, we are told that: "Interlarding one's remarks with foreign languages such as French . . . would be thought pedantic to the verge of being put down as a schoolmaster, a social condition of not particularly good form in high society"—so that, in this respect, the author is self-convicted of "bad form." As a handbook of the order of precedence, the book may possibly be useful to members of the American legation, whose education might seem neglected if they knew not that the Master of the Horse goes in to dinner before the Vice-Chamberlain. Ordinary readers will be interested to know that "in England a gentleman must be one by birth. Conduct has nothing to do with it"; that "the Prince of Wales has a nickname well known in society—it is Tummy"; that "the Attorney-General and Solicitor-General are never called General So-and-so"; that "dentists have no social standing at all in England"; that "there is no such entertainment known in England as a ladies' lunch party"; and that an American "must never criticise the *looks* of a person of rank." They will also read with awe that "the fact should be crystallized in every American's brain that a baronet is not a nobleman, neither is he a lord"; and that "within a year or two an effort has been made to introduce the wearing of a high hat with a jacket"; and they will feel immensely relieved by the author's assertion that "this is a fashion that will never take lasting root"! It is rather startling to be told that "advertisements of births are always of son or daughter—never in any other fashion"; on the other hand it is curious to note that "there could be no worse form than for a lady to sign her name Mrs. John Jones or Mrs. Fanny Smith. The signature should be Fanny Smith in both cases." Surely, Mr. Smith should be allowed an appeal from this decision! At page 204 information is given as to the "mode of formally addressing letters to persons of rank"—*e. g.*, to the Princess of Wales: "Commencement, Madam; conclusion, I have the honor to be, madam, your Royal Highness's most obedient, humble servant, H.R.H. the Princess of Wales, K.G.," etc. Presumably the latter part is meant for the address on the envelope, but the Princess of Wales would surely be astonished at being addressed as a Knight of the Garter!

The facts scattered through the book are of so varied a character as to suggest encyclopædic researches, but they are for the most part correct. At page 21, however, it is stated that Edward the Black Prince was the first English duke, created in 1337, and at page 24 it is further stated that the title of Marquis was introduced several years before that of duke, and that the first marquis was Robert de Vere, created in 1386. But the weakness of the book does not result so much from its errors of omission and of commission as from the absurd theory on which it is based, viz., that perfect manners are only to be found among the English nobility and their imitators. An eminent floor-manager has recently stated that New York society consists of about four hundred men and women. And yet there are people who would regret that an intelligent foreigner should derive his only idea of New York society from association with this limited circle. They would fear that he might carry away the impression that New York society is composed of a few individuals rather lacking in what Matthew Arnold calls "the interesting." And so in London it has been rudely said that there are not a dozen members of the House of Lords who are capable of intelligent conversation on any but the most elementary subjects. Americans who know London society know that its charms are not to be enjoyed in the houses of the aristocracy, which are insufferably dull, but that in the less pretentious abodes, where they find "the feast of reason and the flow of soul," they are sure to find also the manners of gentlemen, which are the same the world over, and which are not learned in handbooks such as this.

"The member of New York's most exclusive circles" who has written 'Manners' "from her own experience as a woman of society and fashion," is so deeply impressed with the gravity of the subject that she has induced nine other ladies, who are presumably no less exclusive and equally experienced, to give the book a formal endorsement in writing. By this ingenious arrangement her decisions on the all-important questions at issue carry absolute conviction to the ordinary mind, and make criticism well-nigh impossible. If the book were really devoted to the consideration of *manners*, this solemnity would be worthy of all praise; but, as a matter of fact, it is entirely devoted to *customs*, which are, by comparison, fleeting and transitory things. The midshipman on the Pacific station who wrote home about the manners and customs of the South Sea Islanders, said that as for manners they had none, but their customs were simply abominable—thereby showing that he had fairly grasped the subtle distinction between manners and customs. This book contains a vast number of rules and regulations in regard to awnings, balls, baths, brides, caudles, cards, and many other interesting matters, and, according to the preface, "meets a demand that has long been acknowledged." It is to be hoped that, in regard to these things at least, New York society will in future move more smoothly and make fewer mistakes.

Girard's Will and Girard College Theology. By Richard B. Westbrook, D.D., LL.D. Published by the Author. No. 1707 Oxford St., Philadelphia.

Dr. Westbrook's book, which is respectfully dedicated "to the Mayor, Aldermen, and Citizens of Philadelphia, their successors and assigns in trust," has been written under a strong conviction that the present system of religious instruction in Girard College is a palpable violation of the founder's will, and not well adapted to promote those "purest principles of morality" which were his dearest care. The book is made up of five chapters, and an appendix containing the will of Stephen Girard in good part, and a part of the opinion of the Supreme Court on the will, delivered by Chief Justice Story in 1844. There are portions of the latter from which it is a far cry to the public sentiment of the present time, however it may be with their legality, as where it is assumed that Christianity is a part of the common law of Pennsylvania, and where it is questioned what would be the fate of a devise for the establishment of a school or college "for the propagation of Judaism or Deism or any other form of infidelity." The present action of the College would seem to be perfectly consistent with the decision of Judge Story. But no such action was then on its trial. The question then was, Should the will be broken because of its exclusion of clergymen from the College premises and instruction, and because its exclusive preference for purely moral teaching was implicitly anti-Christian?

In the first chapter we have "The Case Stated"; first, some slight account of Girard's life and will, and then an exhibition of the present methods of the College in the matter of religious instruction. It seems that it has a chapel on its grounds, that the manual used in this chapel is of evangelical theology all compact, bristling with texts and stanzas that affirm the doctrines of the trinity and vicarious sacrifice and their next of kin. It is true that no ordained clergyman is permitted to teach in the College or preach in the chapel, but every Sunday a preacher is furnished by the Young Men's Christian Association, and to make sure that Girard's wish "that the tender minds of the orphans shall be free from the excitement which clashing doctrines and sectarian controversy are apt to produce," great care is taken that all of the preachers shall be of one kind, and that soundly evangelical. It is difficult to see why these preachers should not be even legally, as well as morally, regarded as the "missionaries," if not the "ecclesiastics" or "ministers," excluded by the founder's will. There cannot be the slightest doubt that the income of Girard's money is being used in a way that would have been abhorrent to his soul, and against which he would have fortified himself if he had anticipated a mere formal adherence to his injunctions (if so much as that) while their spirit would be entirely disregarded. Girard was a deist of the school of Helvetius and Voltaire, as is plainly shown by his naming two of his ships after these men. What he wished to keep out of his college was the religious teachings of Protestant and Roman Catholic orthodoxy. His exclusion of "ecclesiastics, missionaries, and ministers of any sect" was merely a means to this end. "For ways that are dark," which he did not anticipate, he failed to provide sufficiently, it would appear.

In his second chapter Dr. Westbrook examines the defence of the directors, which consists in the assertion of their freedom from sectarian teaching, and their claim that Girard did not wish to exclude the common principles of Christianity. The second proposition Dr. Westbrook doubts, and the first he thoroughly disproves. In his third chapter he discusses with much force and earnestness the question, "Are Sectarian Dogmas Essential to Morality?" arriving at a negative conclusion. In his fourth and fifth chapters he sums up the argument and amplifies some special points. It would seem that such a vigorous assault as this must draw out from the officers of the College a more serious defence of their conduct than they have yet made. If it does not, it must appear that they have none to make. In this case, will they go on in direct contravention of the wishes of the man whose bounteous charity has been intrusted to their hands, or will they endeavor to bring their action into conformity with his desires?

The controversy which Dr. Westbrook argues with so much earnestness and evident sincerity is an interesting pendant to the Andover controversy. Such liberals as are well satisfied with the action of the Andover professors have in the Girard business an opportunity to "know how it is themselves," and to judge, with the boot upon the other leg, whether it is perfectly comfortable and satisfactory. Those who, however they may feel about the Andover teaching, believe in the sacredness of trusts till they are legally annulled, will find the same moral defect in the liberal construction there as in the conservative construction of the pietists of Girard College.

Historic Waterways: Six Hundred Miles of Canoeing Down the Rock, Fox, and Wisconsin Rivers. By Reuben Gold Thwaites. Chicago: A. C. McClurg & Co.

Here is a book that, like Topsy, was never "made," but just "grew." The author, living on the head-waters of Rock River, had a passion to see where it ran to. So, putting his wife and some other necessaries on board a thirteen-foot skiff, weighing only ninety-five pounds, he floated down stream to the confluence of the Rock with the Mississippi. But "floated" is too weak a word for a voyage on which Mr. Thwaites forced a passage through one and twenty barriers of barbed wire hedging up his way, and dragged his boat over not a few portages that were still more formidable. Notwithstanding, he laid behind him about forty miles a day during a descent of well-nigh three hundred miles.

The wayside or waterside scenes struck the canoeist as a series of revelations, so he jotted down what met his eyes and ears, and, behold, there came out this book. The work abounds in original observations in a neglected field. Not the least amusing disclosure is where the River and Harbor Improvement money goes to. Mr. Thwaites's range is wide, but for botanical gleanings and nomenclature he betrays a large debt to his wife, the sole sharer of his boat, holding the steering paddle, to whom the volume is fitly dedicated. We are told of water-bugs on lily-pads—of turtles basking on sand-banks — of bitterns and other birds of higher flight—of islands that stud the stream and render the channel sometimes labyrinthine — of bluff-heads, among them one named Eagle's Nest by Margaret Fuller—of limestone palisades which gave the river the name of Rock. But the most curious and frequent "find" along Mr. Thwaites's route was a phenomenon analogous to the dead cities of the Zuyder Zee.

Dead cities in a State only forty years old are indeed a wonder which needs a word of explanation. The genesis of Wisconsin was in this wise: Black Hawk, who had agreed to remain west of the Mississippi, in 1832 crossed it near Rock Island with his warriors. He was pursued, chased up the Rock River from its mouth to its source, and, by a more northern course, back into Iowa. The soldiery in this "Black Hawk war" were largely farmers' boys from older States. Few of them failed to pick out farms along the Rock, which, after the Indians were expelled, they made haste to occupy, each with the girl he had left behind him. Railroads had not yet been tested; canals were in their glory. The first charter for internal improvement in the Territory was to connect the Rock with Lake Michigan. Hamlets sprang up with mushroom rapidity along the river, each and every one, like the holder of a lottery ticket, having, in its own opinion, the fairest prospect of a "boom," when farm lands would sell for city lots. Railroads were a killing frost to all these budding hopes. Seldom was our voyager out of sight of pretentious sign-boards and battlemented fronts to make shanties look two stories high—tombstones, as it were, of great expectations and dead cities.

In keeping with the architectural wrecks are what may be styled the "'longshoremen." These are survivors of the pre-agricultural era, or degeneracies from it, and are nothing if not fishers and hunters. What the vacationist takes as the extreme medicine of his constitution, is their daily food. They hang on the outskirts of civilization, or rather have been shaken off as the dust of its feet. Never have these pariahs been better photographed than by Mr. Thwaites. Their children's heads, rising above one another "like a step-ladder," did not augur the survival of the fittest.

Our author's Rock River experiences were repeated, with manifold variations, in the self-same boat, from end to end of the Wisconsin and Fox Rivers. His rowing in all was little short of six hundred miles, aided slightly by an awning which he sometimes spread as a sail.

Mr. Thwaites is the new Secretary of the Wisconsin State Historical Society. It was fitting that, on the threshold of his service, he should traverse pioneer routes in a pioneer

boat. This he has done more thoroughly than any living man who is likely to record his observations. His travels will aid his documentary research, as Parkman's roughing it in a similar style so essentially aided him. The title 'Historic Waterways' is expressive. The book is not without historical notices running back on Wisconsin ground through all generations up to within four years of the founding of Boston. "Waterways" is a self-explaining compound, which, with "Wisconsin," forms a euphonious alliteration. Yet the only definition of this compound, in both Worcester and Webster, is: "A piece of timber serving to connect the sides of a vessel to the deck, and through which the scuppers are carried." "Widespread" is a significant substantive—in contradistinction to narrows—but unknown to Worcester and to Webster, as are "swish," "carry" as a noun, and several others of Mr. Thwaites's vocables, which *Bardolph* would yet pronounce "words of exceeding good command." There is something racy in his reproduction of the patois of the lurkers along the rivers—its very form and pressure. But now and then his own diction is not immaculate. His title-page motto is a good keynote from Thoreau. One still better is this of Pascal, who said everything in words which no man can mend: "Les rivières sont les chemins qui marchent, et qui portent où l'on veut aller." Our canoeist cannot lack followers on the waterways—once highways but now byways—which he discovered in his outing, and has described in his book.

Picturesque San Diego, with Historical and Descriptive Notes. By Douglas Gunn. San Diego, Cal. Illustrated with seventy-two photogravures.

"EARLY in March, 1887, the author and Mr. Herve Friend, one of the ablest photographic artists in the country, took the field, and together they covered over 1,500 miles of travel, securing views of the most characteristic features of the 'back country' of San Diego. It is believed that no work of so expensive a character, illustrative of a section, has hitherto been published." After this the fashion must be widely followed. Not to speak of a picturesque New York or Philadelphia, let the reader, a native of any country town, figure to himself an edition of seventy-two of the most picturesque scenes of his own boyhood. And what neighborhood could not produce them? In fact, we are of opinion that our Eastern neighborhoods would not suffer by comparison with the one here presented. Whether illustrating New York city, the Hudson, New Jersey, the Delaware, Lehigh, or Schuylkill Valley, the Susquehannah, West Branch, or the Juniata, we could, in seventy-two scenes, produce even more to gladden the eye than San Diego. The difference is in the different floras of the two countries. It must be remembered that the two gentlemen to whom we are indebted for this pleasure "took the field early in March, 1887. The season in which we were compelled to make our artistic tour was perhaps the most unfavorable possible. There had been no rain or snow in the mountains of any consequence for several months; the trees in the orchards had not yet come to foliage and blossom. But there the country is, just as we found it, faithfully reproduced with the unerring accuracy of the photograph"; skilfully supplemented, it should be added, by the art of photogravure. In looking at these pictures, we must never forget that "the mountain-tops in the north may glisten in their robes of snow, the atmosphere may glow with fever-heat in the Colorado desert on the east, yet the resident of San Diego, dwelling but eighty miles from mountain-top or desert depression—300 feet below the level of the sea—enjoys the same delightful temperature, never rising above 80° or falling below 40°, with scarcely a perceptible difference between winter and summer, wears the same clothing, and sleeps under the same covering the year round."

The illustrations in this book will show more plainly than any descriptive writing can do that there is, to quote again our authors, a real "back country behind the city of San Diego; and while it was our aim, in obtaining these views, to secure the picturesque features of our scenery, it was also our purpose to show that there really is *water* in this so-called 'dry' country—that there is not only water, but an abundance of it." In execution of this special design we have a series of views like the Linda Park, the Pond at Agua Tibia, Elsinore Lake, San Bernardo River, North San Diego River, Cuyamaca Lake (146 feet), Falls East Branch of San Diego River, Santa Isabel Creek, Falls of Pauma Creek, and the Sweet Water Dam, which are certainly enough to freshen the dreams of any wanderer in the desert.

San Diego has an excellent harbor—the best between San Francisco, 480 miles northwest of it, and Callao, say 4,000 miles southeast. This harbor is 500 miles nearer the south Pacific ports of Australia and New Zealand than San Francisco or any other harbor of our coast, and is 350 miles nearer New York than San Francisco is. The question of a "back country" was, therefore, superfluous; even without a back country, a city would have been built on the spot. But the question of a back country has been wholly solved. Not merely is a grain-producing district provided; not merely has a great cattle range been established in the "cow counties" of California for half a century, with San Diego as its entrepôt; but the same soil has been found to produce almost all those staples which our country otherwise lacks. "The principal productions of the country at present (1886) are, in the order named, wheat, wool, and honey." The olive, the fig, the date, the banana, the cocoanut, and, probably, the bread fruit, are well established; the vine, the great staple of history, and the orange and lemon, the modern staples, already contribute to the world's stock. The sugar cane is established, and is probably, in part, reserved for portions of what we now call the Colorado Desert.

On the educational and social facilities of San Diego, its hotels, its labor rates, its rapid growth in population and in commerce, we cannot dwell here. The book must be referred to by the curious.

Woffington: A Tribute to the Actress and to the Woman. By Augustin Daly. J. W. Bouton. 1888.

No name in the history of the stage recalls a more accomplished artist or a more fascinating woman than that of Mistress Margaret Woffington; and yet she has waited until now, a century and a quarter after her death, for an adequate record of her career in the theatre, and for a considerate account of her character in private life. Mr. Fitzgerald Molloy's biography is one of the most shameless pieces of bookmaking ever thrust before a long-suffering public; and the chief tribute to her memory has been the romance-drama, the 'Peg Woffington' of Charles Reade, and the "Masks and Faces" of Charles Reade and Tom Taylor—a very clever work, but no more true to life than the real David Garrick was like the hero of T. W. Robertson's adaptation from the French.

Mr. Daly's memoir is most sumptuous. It is perhaps the most richly adorned volume ever devoted to the memory of a player, not excepting M. Arsène Houssaye's large and elaborately illustrated book about Molière. The form is royal quarto, and the well-proportioned page measures a little more than ten by fifteen inches. The type is bold and the book is printed on laid paper. The illustrations are abundant, and they are of all kinds, woodcuts, artotypes, and photogravures. There are sixteen in all, eleven being portraits of Mrs. Woffington. The chief of them is the frontispiece, a rich photogravure of the actress as *Sir Harry Wildair*, from a picture by Hogarth. We are not without some slight doubt as to this attribution, but there can be no dispute as to the value of the painting. Among the other likenesses, those which best suggest her beauty, her grace, and her charm are the anonymous portrait in the Jones collection at South Kensington (of which Mr. Daly gives us a woodcut printed on India paper), the delightful portraits by Eccard and Van Bleeck (here reproduced from fine impressions of the old engravings), and three portraits in character (also reproduced from the old engravings). Among the other illustrations the foremost is an admirable photogravure of a portrait of Mrs. Cibber by Thomas Hudson, hitherto unengraved and now belonging to Mr. Daly. There are also a woodcut of Woffington's monument in Teddington Church, an autotype of the church itself, a view of the almshouses which it is supposed that she erected at Teddington, and a facsimile of her autograph. To enhance this richness of illustration, there is another attraction for the collector—the edition is limited to 150 copies, plus a few more on large paper.

But it must not be supposed that the merit of the book lies rather in its decoration than in its literary quality. Such is not the case. Mr. Daly's biography is admirably written, in a style which has a color and a flavor of its own; and it is founded on the most careful and loving research. Now and again it may be possible to dispute an inference of the author's—he seems, for example, to be inclined, as is the custom of biographers, to overpraise Mrs. Woffington's virtues, which were many, and to gloss over her vices, which were far fewer; but it would be impossible to deny that Mr. Daly has taken the utmost pains to secure accuracy and exactness. Every historian of the stage, every contemporary writer of memoirs, every biography of her time, has been searched for facts and illustrations; and although it might be said that Mr. Daly sums up in favor of Mrs. Woffington, yet he has honestly set down all the testimony against her, so that the reader may, if he will, act as his own court of appeals and reverse the author's decision, on the ground that it is not supported by the evidence. We doubt, however, if any reader will care to do this; it is only a harsh moralist who must treat the kindly Peg with other than lenity. Every anecdote, every epigram, every copy of verses which may shed light on the career of the actress or the character of the woman, will be found here industriously collected and admirably arranged. In short, this sketch of Margaret Woffington by Mr. Daly is one of the very best of theatrical biographies. There is, as we suggested before, a pleasant personal quality about the writing; the reader finds many turns of sly, playful humor, and many touches derived from the author's own experience as a manager.

It remains only to be said that the author is

abundant in references to his authorities, that he has provided an ample index, and that he has drawn up a list of Woffington's parts—a supplement without which no histrionic biography is complete, and which serves in this case to show the range and versatility of the actress.

Letters of David Ricardo to Thomas Robert Malthus, 1810–1823. Edited by James Bonar. Oxford: Clarendon Press; New York: Macmillan & Co. 1887.

Mr. Bonar's scholarship was well established by his recent book 'Malthus and his Work,' and this publication will at least not diminish his credit. What he has added to these letters is not much in quantity, but it represents a great deal of labor. The preface contains the substance of an essay upon Ricardo as an economist, although it is in too concentrated a form to be more than a suggestion of the main lines of criticism taken by modern thought. We are furnished also with an outline of the subjects of the letters, which is very carefully done, and is of great assistance to the reader. There is, besides, a full index, as well as a chronicle of the principal events occurring during the period covered by the letters, to say nothing of an abundance of judicious footnotes and some "connective tissue." In short, the editor has done all that an editor could do. Had he attempted more, he would have been obliged to compose an elaborate treatise upon the early history of the science of political economy—a task for which we incline to think he is well equipped, and to which we cheerfully invite him, but in the execution of which these letters would have played only a subordinate part.

As to the letters themselves, they are of interest only to economists, and to them chiefly as an intellectual exercise. The corresponding letters of Malthus have not been preserved, and the reader is in much the same position as if he were listening to a man using the telephone—he can imagine answers to the questions he hears and supply questions to the answers he hears, but he cannot be sure that he is doing justice to the absent interlocutor. Moreover, the positions of Ricardo are but imperfectly defined, for they must have been often stated by Malthus, and only explained or defended in reply to strictures the precise nature of which we do not know. We must add to these difficulties the circumstance that the letters relate almost exclusively to the most abstruse questions in political economy. Some of these questions Ricardo himself was the first to raise, and the steps by which he reached the solutions that are associated with his name may be here laboriously traced. Others, as those relating to value and the measure of value, are discussed with great sagacity, but without positive result; although we may say that later economists have not been able to carry the matter much further. In general, the attitude of the writer strikingly resembles that of Darwin as shown in his recently published letters. There is the same disinterested devotion to the truth, combined with an almost pathetic desire that the correspondent may be convinced by the argument in support of a certain view of the truth. There is, too, the same slight but gracious infusion of the personal element, as in the constant invitations to Malthus to visit him, and the same obliviousness to all that is going on in the world outside of science. This is perhaps more remarkable in the case of Ricardo, as he was a stock broker, and therefore necessarily attentive to the course of events. It may be added that he was so successful in reducing his economic theories to practice as to leave the—for those days—enormous fortune of £700,000.

The subjects of price, currency, rents, and profits, with which these letters are chiefly occupied, are not those which at present engage the attention of economists. The subject of wages, nowadays so prominent, is not very broadly treated, and the argument, from our point of view, is largely vitiated by Ricardo's neglect to consider the extreme differences in the quality of labor and laborers. It, however, deserves attention, and is perhaps not so antiquated as is commonly supposed. It is refreshing to leave the present atmosphere of economic discussion, which is, to say the least, injuriously affected by the introduction of political and moral considerations, and to enter one where sentiment is not intruded, and where questions of definition and of pure logic are calmly examined by the dry light of science. The spirit in which Ricardo conducted his investigations is well shown in the following extract from one of these letters:

"Nothing is to me so little important as the fall and rise of commodities in money. The great inquiries on which to fix our attention are the rise or fall of corn, labor, and commodities in real value—that is to say, the increase or diminution of the quantity of labor necessary to raise corn and to manufacture commodities. It may be curious to develop the effects of an alteration of real value on money price; but mankind are only really interested in making labor productive, in the enjoyment of abundance, and in a good distribution of the produce obtained by capital and industry."

It is hardly necessary to say that these letters will afford no material to that class of writers which is addicted to painting Ricardo in as black colors as Malthus. Both were men of unusual enlightenment and benevolence, and the passage just quoted describes the ends which they both had in view. The correspondence between them was abruptly terminated by the death of Ricardo at the early age of fifty-one years. Whoever reads it attentively will concur in Malthus's own judgment: "Our interchange of opinions was so unreserved, and the object after which we were both inquiring was so entirely the truth and nothing else, that I cannot but think we sooner or later must have agreed."

Reginald Pole, Cardinal Archbishop of Canterbury. An Historical Sketch, with an Introductory Prologue and Practical Epilogue. By Frederick George Lee, D.D. With an etched portrait of Cardinal Pole. London: John C. Nimmo; New York: G. P. Putnam's Sons. 1888. 8vo, pp. 312.

Dr. Lee's life of Cardinal Pole is not written from an historical point of view, but is a plea for "Corporate Reunion," that ecclesiastical policy which, as he says, was once happily carried out by the subject of this biography. A prologue and an epilogue of considerable length are devoted to urging this policy, but the policy is nowhere definitely described. The nearest approach to a definition that we find is where it is suggested that when this corporate reunion between "the Church of England and the Church universal" has taken place, there may well be four archbishoprics of Canterbury, York, Westminster, and Caerleon (p. xix). This is intelligible, and, so far as it goes, fair; but this was not Cardinal Pole's idea of corporate reunion. That was one of those compromises which consist in the unconditional surrender of one party to the other; and we suspect that, at the present day, when it came to the point, those would be the only terms upon which the "Church universal" would consent to unite with any national church. Another question to which our author offers no answer is, what is to be done with those persons—probably a majority of the people of Great Britian—who belong to neither of the two united churches. Cardinal Pole's reunion had a very summary and effective way of dealing with these elements of society; are we to understand that the new union is to adopt the same method? If not, we cannot see that the corporate reunion of two fractional bodies could accomplish much in the way of restoring ecclesiastical unity.

The book is written with earnestness, and in a humane spirit, with no attempt to justify the barbarities which were committed under Cardinal Pole's administration, although, as is insisted, not by his fault. "Nothing could have been more disastrous," Dr. Lee says, than the course of these events; but as no blame can attach either to the King, the Queen, the Legate, the Lord Chancellor, or the Bishop of London, the safe course is taken of referring the "evil to the age itself in which such things were done." The age and the *system* of enforced uniformity in belief. However it may be with Philip, we may well believe that both Mary and her cousin, Reginald Pole, were, as is well shown in this work, at heart humane, and were only led to persecution by this pernicious principle, upon which their corporate reunion was based.

The Life and Times of John Wilkes, M.P., Lord-Mayor of London and Chamberlain. By Percy Fitzgerald, M.A., F.S.A. 2 vols. Scribner & Welford.

This book might have been more appropriately entitled 'The Life of Wilkes,' for it is defective in giving us no comprehensive view of his times. His name marks an episode in constitutional history with which he was connected as an occasion, not as a cause, and Aristotle's dictum that the occasion of a revolution may be of a very trifling character, is entirely applicable to him. Wedderburn seems to have judged shrewdly when he said at the time of the Middlesex election: "Wilkes, I dare say, is vain enough to imagine he has raised all this tumult, but, in my opinion, he is as innocent of it as the staff that carries the flag with his name upon it." He was a man singularly deficient in virtue, nor do we know that he was possessed of any amiable traits except his affection for his daughter, his buoyant disposition, and his powers of conversation. He was totally devoid of principle both in public and in private matters, and his habits were of the most abandoned character. With a little more brutality he would have been a match for Barry Lyndon. He was false to his friends, without gratitude to those who assisted him, unblushingly venal, and in every way so contemptible that it is a distinct reproach to English liberty that his name should have been associated with its advancement. It might justly be said that a people who could find no more respectable champion than Wilkes in their struggle against arbitrary government were unworthy of success, and it is beyond question that this success was principally due to the egregious blunders of those in power. His letters prove conclusively that from the beginning to the end of his agitation for "liberty" he had only one end in view, to force the Government to give him a place or bribe him to keep silent. Knowing this, it is difficult not to look upon the whole episode as farcical, and Mr. Fitzgerald's manner of telling his story encourages this tendency. He wastes time over the uninteresting and insignificant details of Wilkes's life, and as he gives no satis-

factory account of the constitutional questions of that epoch, his book has not much value.

BOOKS OF THE WEEK.

Agassiz, A. Three Cruises of the U. S. Geodetic Survey Steamer *Blake* in the Gulf of Mexico, in the Caribbean Sea, and along the Atlantic Coast of the United States, from 1887 to 1880. 2 vols. Boston: Houghton, Mifflin & Co. $8.

Alden, W. L. A New Robinson Crusoe. Illustrated. Harper & Bros.

Annual American Catalogue. 1887. Office of *Publishers' Weekly*. $3.50.

Balg, G. H. A Comparative Glossary of the Gothic Language, with Especial Reference to English and German. Parts 1, 2. B. Westermann.

Barine, A. Essais et Fantaisies. Paris: Hachette & Cie.

Besant-Rice. My Little Girl. Dodd, Mead & Co. $1.50.

Besant-Rice. The Golden Butterfly. Library ed. Dodd, Mead & Co. $1.50.

Bigelow, J. France and the Confederate Navy, 1862–1868. An International Episode. Harper & Bros.

SPANISH SIMPLIFIED.

Eminently practical for self-instruction: (1.) German Simplified—Complete in 12 numbers (with keys), at 10 cents each. (2.) Spanish Simplified—12 numbers (with keys) 10 cts. each; No. 8 now ready; a new number every month. Sold by all booksellers, or sent by the author, Prof. A. Knoflach, 140 Nassau St., New York.

NATION.—BACK NUMBERS, volumes, and sets bought, sold, and exchanged. A. S. CLARK, 34 Park Row, New York City.

Three Cruises of the Blake.

A Contribution to American Thalassography. Three Cruises of the United States Coast and Geodetic Survey Steamer Blake in the Gulf of Mexico, in the Caribbean Sea, and along the Atlantic Coast of the United States from 1877 to 1880. By Alexander Agassiz. With many illustrations. In two volumes, royal octavo, gilt top, $8.

The volumes give the result of dredging along the Atlantic coast and in deep water; describe the contour of the ocean bed, the fauna, and the thermic conditions of the sea; and contain a statement of what had been learned from previous explorations as well as the extensive, varied, and deeply interesting facts ascertained by the three cruises specially reported. The volumes are illustrated with maps, sections, and figures of the deep-sea fauna. The scientific value of the work is amply guaranteed by its author.

TO RENT—For use as a young ladies' school, "Buena," the seat of the late James B. Waller, Esq., near the lake shore, five miles north of the Chicago City Hall; the house is of Milwaukee pressed brick, covering 50x96 feet of ground, 2½ stories high, having twenty large rooms; it is situated in the centre of twelve acres of beautifully wooded land, and has sewer, water, and gas connections, and is surrounded by paved streets and stone sidewalks. It is in the centre of Buena Park, a new and beautiful suburb of Chicago, connected with the city by steam and horse-cars, one mile and a half north of Lincoln Park. The object of the proprietors in offering the place for the purpose named is to furnish the locality with a first-class school. A nominal rent would be asked of an experienced person whose reputation as a teacher and principal would be a guarantee of success.

Address,

R. A. WALLER,
164 La Salle St., Chicago, Ill.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

AN EXPERIENCED LADY teacher desires position in school for fall; English, French, and music; references given. Address MISS C. R. LEVERETT, Carlisle, Pa.

The Nation.

NEW YORK, THURSDAY, MAY 17, 1888.

The Week.

THE size of the majority by which the Copyright Bill has passed the Senate, warrants the belief that it will not encounter any serious difficulty in getting through the House. It is not, as has been often remarked, by any means the kind of bill which some of the earliest and most active friends of international copyright would like to see, but it has the immense and overwhelming merit of being an acknowledgment of the right of foreigners to the enjoyment of literary property on American soil. No matter how imperfect may be the protection which the law will give this species of property, the admission by our Government that it exists and ought to have some kind of protection, is still a very great gain. The gain, in fact, in this matter, as in all matters, must be measured rather by the difficulty which has been experienced in securing it than by the positive advantages it bestows. Anything which has cost a century of struggle is a considerable thing. To many people in this country it is very difficult to conceive of anything as property which the law does not recognize and protect as property. How often in the course of this discussion have we had to contend with the delusion that because a book can be stolen with impunity it may, therefore, be stolen without wrong. The present bill, therefore, inadequate as some may consider it, will have a very powerful educating influence. It will familiarize the country with the notion that a man may have a moral right to a thing, even if he have no legal right; and when this has been accomplished, the work of making the legal right fully commensurate with the moral right may safely be left to time and discussion.

The Chinese issue appears to be practically removed from our politics by the ratification in the Senate of the treaty establishing more rigorous rules against the admission of Mongolians to the United States. The vote in the Senate was all but unanimous, and the measure seems to be as sweeping as even the Pacific Coast could ask. The elimination of the Chinese issue is bad for Mr. Blaine, who has always outdone every other Republican candidate for the Presidency in demagogism on this question, while a settlement of the controversy satisfactory to the Pacific Coast is another illustration of "Cleveland's luck."

President Cleveland began vetoing improper private pension bills a few weeks ago, and now he is applying his negative to public-building bills which will not stand scrutiny. The first to encounter this fate is a measure proposing to appropriate $100,000 for the construction of a building at Allentown, Penn. The President shows that there is no necessity for such a building for any purpose connected with the public business, and that its erection would result in increased expense to the Government, since the annual rent now paid is only $1,300, while 3 per cent. interest upon the amount asked would be $3,000 a year, to which must be added the pay of a superintendent of construction while it is building, and the compensation of janitors and other expenses of its maintenance after it is done. Mr. Cleveland concludes with these excellent remarks on the general subject: "The plan now pursued for the erection of public buildings is in my opinion very objectionable. They are often built where they are not needed, of dimensions and at a cost entirely disproportionate to any public use to which they can be applied, and, as a consequence, they frequently serve more to demonstrate the activity and pertinacity of those who represent localities desiring this kind of decoration at public expense, than to meet any necessity of the Government."

One of the best features about the Presidential canvass which is just opening is the apparent assurance that it will be prosecuted without the disturbance to business which has characterized so many previous campaigns. The *Dry Goods Chronicle*, an intelligent trade paper, says that "all the conditions promise a fair year's trade"; that "business in all channels seems to be conducted on a very conservative basis;" and that there seems "no disturbing element likely to prevent a cheerful and prosperous business for the remainder of the year." The *Chronicle* attributes this in part to the fact that the more intelligent the people become the less they are influenced by politics, or the less a Presidential year is felt to be an off one; and it says that the chicanery and trickery of politicians, their hidden ways and dark means of exciting or disturbing the business interests of the country, are now pretty well understood, and are no longer very potent for ill. This is undoubtedly true as far as it goes, but there is another consideration which enters into the case this year. For the first time since the war there will be a campaign in which the "scare" argument plays no part—the argument, that is, that the country might be ruined if there were a change of administration. This argument has been very potent in the past, and has exerted a baleful influence upon business in a Presidential year, since many presumably intelligent men feared that the success of the Democrats might cause a financial convulsion. But the Democrats succeeded four years ago, and with business more prosperous now than it was then, it is doubtful if anybody will have the impudence to present the "scare" argument; and if anybody should be foolish enough to do so, it will produce no effect upon business men.

It is not worth while to consider seriously the reasons which Gov. Hill put forward in defence of his veto of the High-License Bill. There is not an intelligent observer in the State who will claim for a moment that those reasons had any influence whatever in deciding the Governor's action. Everybody knew that he would simply weigh in his mind the question of whether he could gain more political advantage for himself by vetoing than by signing the bill. As he had small hope of gaining the confidence of the more orderly and respectable portions of the voters by anything he might do, he simply came to the conclusion that he would defy them, and risk all his political chances upon the brewing and other liquor interests of the State, hoping through that powerful influence to force his renomination upon the Democratic Convention, and trust to the strength of the President and the excitement of a Presidential election to carry him into office for another term. Meantime, he has received his first official notification from his party that they do not care for further service from him. It is useless for his friends to pretend that he was not a candidate for delegate-at-large to the National Convention, for it is notorious that he was. He was very anxious to go there at the head of the delegation in order to give the impression that while the Democratic party of New York State was for Cleveland for President, it was none the less a Hill party, and gave its allegiance to Cleveland through the graceful acquiescence of David Bennett Hill. It was an attempt to link the names of Cleveland and Hill together in the hope that they would remain united in the fall campaign in this State. The emphatic refusal of the party to accept the plan is pretty conclusive evidence that the Governor's chances for a renomination are no longer worth consideration.

The Ballot-Reform Bill passed the Senate on Thursday by the handsome vote of 20 to 8, and its fate now depends upon the Governor. There are very direct rumors that he said several days before that he would veto it if it ever reached him, but we shall hesitate to believe, until he does veto it, that his eagerness to capture the support of the worst elements in politics can carry him so far. The bill is not and never was a partisan measure. It was conceived and framed by men of all political faiths, including Democrats, Republicans, Independents, and Labor Reformers. The Democrats among them probably outnumbered the representatives of all other parties taken together, but they, like those other representatives, devoted themselves to the task in hand, not as partisans, but as public-spirited citizens. The bill which they framed has no other object than to make elections honest by taking the control of them out of the hands of political heelers and strikers. If the Governor sees fit to veto it, his action will be only another sign that he thinks the support of the dishonest, disreputable, and tricky element of the Democratic party

more powerful than the honest and respectable elements. There is not a newspaper in the Democratic party of this city or State, which has any standing outside of gambling dens and liquor-saloons, that has not commended this bill and urged its passage. They ought to warn the Governor now that he will not merely injure himself but his party by coming out as the champion of dishonest elections, in addition to his record as champion of unrestricted rum-selling and political jobbery.

The situation in which the State prisons have been left by the failure of the Legislature to appropriate money for the employment and maintenance of the inmates is simply barbarous. As all the earnings of the prisons are paid into the State Treasury, and cannot be got out without an appropriation, the grotesque spectacle is presented of 3,500 convicts working at productive employments and earning money for the State which cannot be employed even to pay for their own bread, the State simultaneously refusing to supply any other funds for that purpose. It follows that unless the Governor calls an extra session, the prison doors must be opened when the present supplies run out, so that the convicts can get something to eat. If those members of the Legislature, including young Mr. Hamilton, who voted against the appropriation, could be shut up in their places for a while, the change would be an appropriate one. As for Mr. Yates of Schenectady, the proper place for him is a county insane asylum. That the Governor will have to call an extra session is evident. Fortunately, no subject can be acted on in extra session except that which he recommends for consideration.

Prof. H. C. Adams contributes an article to *America* (the new Chicago weekly), on the surplus question, holding that wise statesmanship requires that both the internal revenue and the tariff systems be preserved as the permanent framework of our fiscal policy. The reason advanced for this plan is that we ought always to be ready for an emergency, and never again be caught napping as we were when the civil war broke out. We ought to have revenue machinery in actual use and practical operation which is capable of yielding large sums by merely increasing the rates of taxation. It has been shown by experiment that the tariff is insufficient for great emergencies. It has been equally shown that the building up of an internal-revenue system *de novo* is a slow process. This system did not get into the best working order until the war was nearly ended. It did not produce its best results until the year 1866. It is now demonstrably clear that if the internal-revenue system had been in existence before the war, and if the spirit had possessed our rulers to "work it for all it was worth," the whole cost of the war might have been defrayed without incurring a dollar of debt. These are cogent and overwhelming reasons for *not* adopting the Randall-Kelley programme of abolishing the internal-revenue system. Prof. Adams closes his article with a temperate argument in favor of the repeal of duties on all articles "which, by a liberal interpretation, can be classed as raw material," together with a corresponding reduction on manufactured goods into which these raw materials enter. In fact, Prof. Adams seems to agree in principle with the President's message and with the Mills bill in the main, although the latter does continue the tax on some raw materials of an important character.

The New Orleans *Times-Democrat* asks, in view of the Adams-Martin tragedy at Jackson, whether "it is not time to call a halt" "in the matter of fighting with deadly weapons in the public streets" at the South? We think it is. There is no other community as highly civilized as the Southern States, which now treats the world to the spectacle of combats with knives and firearms in the public highway between respectable men, filling responsible positions in society. This last affair was made horribly grotesque by the fact that one of the combatants was an old man of seventy, the other a youngster of twenty-five. But "calling a halt" every now and then when a more than usually atrocious affray has taken place, will not mend matters. The Southern press has done this many a time already without much effect. The cure must begin much further back. Southern boys must be taught from their cradles the sacredness of human life, the shame of carrying deadly weapons in a free State in the nineteenth century, and the folly as well as barbarism of avenging libels and slanders by public murder. If in this last affair Adams, the old man, had prosecuted criminally or sued civilly the young journalistic "squirt" who, after the manner of his kind, was calling him names and making charges against him, he would not only have applied the only effective balm to his wounded honor, but have given the whole State a lesson in civilization which it apparently greatly needs.

The retirement of President Barnard of Columbia College from the active work of an educator, although plainly presaged by the clock of time, has come upon the community at last as an unwelcome surprise. We leave to his brethren in the noble profession in which he has been so long eminent, the duty of recounting in proper terms and at the proper time the particular services that he has rendered to the upbuilding of a university in New York worthy of the city and of the illustrious men who have preceded him, and of those who have graduated from its walls. During his long service, both here and elsewhere, President Barnard has set the example of citizenship before his pupils and his faculty as the end and aim of teaching and the fruition of college life, discharging the duties of the citizen that came to his hand with a sense of modest responsibility, and in all cases with marked advantage to the community. Thoroughly trained in the arts and sciences which make for human progress, and wholly devoid of self-seeking, he has neither withheld any service that he could render beyond the sphere of his profession nor sought any distinction outside of it. He has been preëminently the man teaching as distinguished from the mere teacher, and he has impressed the trait of citizenship upon all who have come within the range of his influence. Although advancing years have compelled him to deliver the laboring oar to younger hands, it is gratifying to know that his intellect remains unclouded, and gives the hope of still further service to the commonwealth. In common with all his fellow-citizens we join in wishing him the reward he has richly earned of a serene retirement, graced with the memories and friendships of a long life in which no time has been wasted or ill-spent.

The Pope's rescript on the Irish question is being speedily explained away. It is confessedly not an *ex-cathedra* utterance, because it is not addressed to the whole world, but only to the Irish, and he is not infallible except when he speaks *ex cathedra*. On other occasions he may make mistakes like anybody else. Moreover, in the present case, he does not speak himself at all; he simply adopts an opinion drafted by one "Congregation," or committee of prelates, who, it is admitted, may have been incorrectly informed about the facts. Then the Irish bishops have still to sit upon the rescript, or, in other words, to interpret it to the Irish people, and, judging from Archbishop Walsh's recent letter in one of the Dublin papers, they are not likely to interpret it in a way that will bear hard on the tenants. It is directed almost wholly against the plan of campaign and boycotting, and it will probably now be said that if the Pope had had the whole situation put fully and accurately before him, he would not have taken such a dark view of the matter. In short, it is apparently not likely to exert much, if any, influence on Irish matters. Parnell gets out of expressing an opinion on it by saying that it would be hardly delicate for a Protestant to do so.

Nothing is more striking in Mr. Gladstone's career than the fidelity with which the Nonconformists, or, in other words, the bone and sinew of the English middle class, have stuck to him in good and evil fortune during the last twenty years. The address from 3,700 ministers of various denominations, which he received on Wednesday week, approving his course in the Home Rule question, is a kind of testimonial which no other public man in England has ever received, and is almost the one sign which never fails of the way the tide would run if a general election were now held. No minister who has the Nonconformists at his back remains long out of power in England. It was their lukewarmness over the education question and some other matters which drove the Liberals from power in 1874, but then it was the Nonconformists' horror of Disraeli's wars, of his sneers over the Bulgarian atrocities, of Salisbury's falsehood and tergiversation, which brought

them back with such a magnificent rush in 1880. That the policy of the Government in Ireland is profoundly distasteful to the great body of English dissenters, there is hardly a doubt, for they have taken every possible means of showing it, and it is their full knowledge of this fact which makes the talk of dissolution so odious to Unionists.

One, and perhaps the chief, reason why the alarm raised by Lord Wolseley and others in England does not produce much impression, and is pooh-poohed by the Ministers, is that it is a periodical alarm. It comes with almost the regularity of commercial panics, and is generally coincident with the promise or the close of some great disturbance on the European continent. The Duke of Wellington made one terrible alarm —probably the greatest there has been since Napoleon had his camp and flotilla at Boulogne—in 1851, after the French *Coup d'État*. There was another very serious one after the Franco-German war, when the 'Battle of Dorking' was written, depicting the horrors of a German march on London, after the defeat of the regular troops and the flight of the volunteers. There would have been one after the war of the rebellion in this country, if the United States had been nearer to England, because many of the highest military authorities, to say nothing of the politicians in England, held that it was perfectly certain that the Federal Government would not dare to disband the army; that it would have to be maintained, and work found for it; and the work, it was held, would probably be the invasion of Canada. If England had not been so far off, it would have been the invasion of England. The probable cause of the present outbreak is the rise of Boulanger in France, who, the alarmists maintain, will, as soon as he gets into power, attack England. It is almost as useless to argue with them as it was to argue with the people here who were fixed in their belief that "the Democrats" would pay the rebel debt and destroy the Government if they secured the Presidency. The ordinary principles of human nature count for nothing in these discussions.

It would probably be unfair to suppose that Lord Wolseley and the other military men who are managing "the scare" are at all insincere in their belief about the danger. No man spends his life under arms, and constantly preparing himself for war, without coming to believe that somebody is going to attack him before long, and without getting into a state of greater or less eagerness for fighting. This is one of the most familiar characteristics of the military mind. In addition to this, however, in England professional soldiers are constantly mortified by the smallness of their force as compared with the great Continental armies, and with the humble and henpecked position in which the army is kept by the civil power. On the Continent, for instance, a civilian minister of war would be looked on as a monstrosity and a great humiliation for the army. They have one in France at this moment, for the first time, we believe, since the Revolution, and it is exciting ineffable disgust among the troops, and supplying Boulanger with some of his capital. But in England nothing else is ever thought of, and he holds the purse-strings, and when the soldiers clamor for more men and horses and guns, he calmly tells them they cannot have them. The only way they can make any head against him is by getting up every now and then an "invasion panic." It will not do to get it up often, because the public would refuse to go into one scare while the remembrance of the last one was very vivid. But, every twenty years or so, there is a generation on the scene which does not recall the fact that during the last panic the enemy never appeared, and its help may generally be counted on to raise the dust of war. One commander of volunteers in London is reported to be so excited at present that he has refused all leaves of absence to officers, and ordered the trumpeters to practise their "calls" daily. It may be that he even sleeps in his clothes.

One of the now somewhat frequent club cases has just come before the English courts. A member of the Randolph Churchill Conservative Club received a notice from the Club Secretary, requesting him to appear before the Committee on a certain day to refute the charge of being "an offending member," and warning him that if he failed to do so, he would be expelled. He answered that he would appear when he was informed what the charge was, and who made it, but not sooner; whereupon the Committee expelled him. Nothing daunted, he went to the club-house as usual and ordered refreshments, but the Steward was directed not to serve him. He then applied for an injunction to restrain them, and they finally rescinded their resolution, and the Committee was condemned to pay the costs of the proceedings. The Court was very severe on the Committee. Mr. Justice Kay said:

> "It was quite true that the Court did not interfere with the internal matters of a society like a club; but there was a broad exception to that rule—namely, that when those matters were so conducted as to be contrary to every man's notion of what was just, then the Court would interfere, especially in the case of the expulsion of a member."

Considering how many of these club troubles have come before the courts, and how particular the courts are in exacting absolute correctness of procedure in club trials, it is extraordinary with what looseness committees every now and then pursue "offending members." As Judge Kay remarked in this case, expulsion from a club "is not a small matter. It is a stigma on a man's character and position, and one from the effects of which but few men would recover. It was a most serious matter and might be social ruin to a man." The explanation of the carelessness of committees is probably to be found in the fact that in the earlier days of clubs, when clubs were smaller and fewer than they are now, "offending members" never thought of offering any resistance. Tried or untried, if the Committee told them to go, they went, and hid their diminished heads. But nowadays club men, like everybody else, think a great deal about their "rights," and defend them to the last extremity.

Both Chambers of the Brazilian Parliament, whose session began on May 3, have promptly united in a measure for abolishing slavery without delay; and though particulars are still wanting, the event means that the present year will witness the extinction of human bondage on the whole American continent. Five years ago the leading abolitionists of Brazil could see no hope of such a speedy consummation; and as lately as 1885 the Cotegipe Cabinet came into power as the consequence of a pro-slavery reaction, with a heavy majority in the lower house. This majority remained firm throughout the last session, but it was well known that a change was being silently wrought in it, and the Conservative schism was fully developed when the anti-slavery wing got the upper hand and brought in a new Administration under the lead of Senhor João Alfredo, with Senhor Prado as his right-hand man. The result is a dishing of the Liberals, whose patriotism, however (like that of the corresponding British party), is superior to jealousy. Meanwhile, in confirmation of the action of the Brazilian bishops, who issued pastorals recommending emancipation as the fittest way of celebrating his jubilee, the Pope has issued an encyclical which does him honor; and the perhaps dying hours of Dom Pedro in Italy are reported to be cheered by the news of the act of Parliament removing the curse and disgrace of the great Catholic empire.

The American people are too busy to give proper thought to what is going on in Brazil, yet emancipation there is undeniably a glorious product of our war for freedom which ended in 1865. Within two years from that date the first abolition measure was adopted, to be followed by the law of 1871, which made freemen of all the future offspring of slaves, and provided an emancipation fund for annual ransoming. But this gradual process was a senseless sacrifice of the higher interests and good name of the country to a class, and proved intolerable, as must needs be, considering the anomaly of the State's maintaining two opposite principles at the same time—sanctioning all the barbarity of slavery while setting a stigma upon it and buying it off. A new era now opens from which we must expect at once only negatively good results, for the mass of ignorance and degradation in the colored race is enormous. The difference otherwise between the situation in Brazil and that of the South in reconstruction days is, that color is no bar to public preferment in the empire. Industrial friction may occur, but the race question, properly speaking, is eliminated. For this, doubtless, the fusing power of Catholicism is to be thanked, though it is almost the only service which the Church has rendered to emancipation.

"POLITICAL PRUDERY."

THE Washington *Post*, which is a strong supporter and admirer of President Cleveland's Administration, says truly:

"The Tariff Bill now pending in the House of Representatives might just as properly be called the Cleveland bill as the Mills bill. It is the response of the Democratic House, through the majority of the Ways and Means Committee, to the urgent demand of the Democratic President for a Democratic reduction of redundant revenues and needless taxation. It is therefore the Democratic party's bill, and no man calling himself a Democrat has a right to work for its defeat or decline to support it."

It then goes on to propose, as a deduction from this, that the President should cast aside what it calls "political prudery," and use his patronage to whip members of Congress into support of the bill. In other words, he is to inform those members of Congress who fail to support it, or support it hesitatingly, that unless they change their ways they "need expect no more favors from him," as "Fatty" Walsh said to the lawyer who refused to submit to his extortions. The slang way of expressing this idea is that the Democratic party "least of all things can afford to have the Democratic Administration feeding at the public crib men who work in the vineyard of the enemy." The proposal, translated into plain English, simply means that the President should offer to put places in the public service at the disposal of Congressmen in exchange for votes in favor of the Mills Tariff Bill, and should refuse such places to Congressmen who decline to vote for the bill.

Of the solemn pledges given by the President not to use his patronage in this way—pledges which are all summed up in his famous saying, "Public office is a public trust"—we shall not now speak. We will even go so far as to admit, for the sake of the present argument, that there is nothing wrong in using the public offices as "spoils," and dividing them at the advent of each new Administration among the "workers" who have contributed to the victory, or even using them as a means of packing conventions and thus securing particular nominations or renominations. We shall confine ourselves to pointing out that the offer of patronage to members of Congress, in order to secure votes for a particular measure, is simply a form of bribery, which, if it differs at all from the offer of hard cash—which was Sir Robert Walpole's plan — differs for the worse, inasmuch as the cash might be the briber's own to do what he pleased with, while the offices cannot be his own under any conceivable circumstances. If a private individual, interested in a bill before Congress because it embodied his views on a great public question, were to go to a member of either house, and offer him the control or disposal of a salaried place, as an inducement to vote for the bill, he would expose himself to conviction, fine, and imprisonment under section 5450 of the United States Revised Statutes, which reads as follows:

Sec. 5450. Every person who promises, offers, gives, or causes or procures to be promised, offered, or given, any money or *other thing of value*, or makes or tenders any contract, undertaking, obligation, gratuity, or security for the payment of money, or for the delivery or conveyance of *anything of value*, to any member of either house of Congress, either before or after such member has been qualified or has taken his seat, with *intent to influence his vote or decision on any question, matter, cause, or proceeding* which may be at any time pending in either house of Congress, or before any committee thereof, shall be fined not more than three times the amount of money or value of the thing so offered, promised, given, made, or tendered, or caused, or procured to be so offered, promised, given, made, or tendered, and shall be, moreover, imprisoned not more than three years.

How would such an offer from the President differ from such an offer by a private citizen? In no way whatever. It would be an indictable offence in either case. How comes it, then, that respectable men, editors, politicians, lawyers, calmly propose such things to the President? How is it that one constantly hears the failure or refusal of the President to use his patronage in this criminal way to promote or to defeat legislation treated as a sign of weakness or incompetency? The reason is simply that the public perception of the guilt and danger of the arrangement has been blunted by long usage. The spoils system has, in fact, not simply deepened the corruption of the baser sort, but has perverted the understanding of many of the best men. They declaim freely against bribery practised by the Ameses and Sharps and Tweeds, but in the very next breath urge the Federal Executive to practise precisely the same wholesale debauchery of the Legislature, by offering salaries in the public service to members to induce them to suppress their private judgment and violate their oaths, and seek only to please him by their votes.

We are interested as much as any one can be in seeing President Cleveland's views on the tariff embodied in legislation. We think the tariff, as it stands at present, a crying evil. But one of the very worst things about it is the power it gives Congressmen to bestow enormous pecuniary favors on individuals by raising duties, and to threaten individuals with heavy loss by lowering duties. No country in the world has yet produced legislators with virtue enough to withstand the temptations created by such a state of things as this. It corrupts the heart and perverts the judgment of everybody who comes in contact with it, and must continue to do so as long as human nature is what it is to-day. But bad as this source of corruption is, we do not care to see it dried up by deepening another and a worse one—for an Executive practising habitual, public, and acknowledged bribery on legislators is a worse one. No Government can stand such a system for any great length of time. Every régime which has long relied on it has gone down, sometimes in flame and blood. England tried it in the eighteenth century, and was only saved by the shock of the American war. France is trying it to-day again, in spite of the memories of the old monarchy, under which the King kept an open market for the sale of the public offices; and we shall very likely see the Third Republic perish under it.

President Cleveland undoubtedly owed his election to the fact that he was believed to be a man who would try to arrest our progress on this downward road in this country. In other words, he was elected not as a tariff reformer, but as a civil-service reformer. His enemies tried to prevent his election by maintaining that he would alter the tariff; his friends retorted that he had no power to do anything of the sort. He is not the man to say now, or permit any one to say for him, that what his friends meant was that he could not legitimately alter the tariff, but that he was at full liberty to alter it illegitimately as much as he pleased. His message on the tariff was a manly appeal to the intelligence of free and honest men in and out of Congress. As such it has produced an extraordinary effect upon the popular mind. We see no sign whatever that its influence is diminishing. On the contrary, we believe the popular respect both for the sincerity and perspicacity of its author grows daily. But that respect would not long survive the general belief that he had enforced his arguments with cash or its equivalent, and had relieved us of a portion of our burden of taxation by offering to the world one of the most woful and disheartening examples of tergiversation to be found in political history.

THE LESSON OF THE PACIFIC RAILROAD REPORTS.

IN all the early work of the Massachusetts Railroad Commission, Mr. C. F. Adams was guided by the idea that the permanent interests of the investors in the long run closely agreed with those of the public at large. By protecting those permanent interests of the property from temporary abuse or mismanagement, the interests of the community were protected also. The success of the Commission furnished the best proof of the soundness of this idea.

As President of the Union, Pacific, Mr. Adams represents the same principle, and urges it upon the attention of Congress no less vigorously than he did upon the Massachusetts authorities fifteen years ago. In his arguments concerning the adjustment of the debt of the railroads to the Government, his strongest point is made in connection with this idea. The Union Pacific, he says, is now owned by investors, and managed for their interests. As long as this is so, the Government has the assurance that the property will be kept in good condition, and will furnish all possible security for the claims against it. If, however, the Government, by a short-sighted policy, should throw the road into the hands of speculators whose interest it is not to preserve it, but to make all they can out of it for the time being, more will be lost in a few years than can be recovered in a lifetime. It is because Mr. Adams is working for the permanent interests of the property-holders, and not for mere annual returns, that the United States has a fair prospect of adjusting its relations with the Union Pacific in a satisfactory manner.

The real state of the case is most strongly brought out when we read the report of the Central Pacific, which has just been issued,

and contrast it with that of the Union Pacific. Mr. Crocker's arguments are no less vigorous than those of Mr. Adams, and are equally conclusive in their way. But they deal with the whole matter from a different standpoint. While Mr. Adams is asking, "What course will best secure the permanent interests of the investors?" Mr. Crocker's question simply is, "What are the specific rights of the parties in the case to-day?" The latter question is much easier to answer than the former; but Mr. Crocker's method of answering it sacrifices the interests of the Government to-day, and those of the stockholders for years hence. It is this which constitutes one of the chief difficulties in dealing with the case of the Central Pacific. The road is in the hands of men who have transferred a large part of their holdings to a rival line. The conditions are such that they are still interested in the temporary returns from the Central Pacific, but have by no means a corresponding interest in its permanent value. Thus situated, they can afford to ask the Government, "What are you going to do about it?" They can disregard the wants of the Government because they consider the temporary rather than the permanent wants of the railroad. Mr. Adams pursues the opposite course, and in so doing he is bound to help the Government rather than to thwart it. It may prove impossible to collect the whole value of the debt in any case. The Union Pacific Road was long managed for temporary interests instead of permanent ones, and its permanent power was somewhat weakened. But the tendency of the present management undoubtedly is to give the Government a chance of collecting more than it would be likely to get under any other system.

This conflict of interests is made unnaturally sharp in the case of the Pacific railroads by the peculiar conditions of the subsidy bonds. The interest charges are all the time accumulating, but the Government cannot foreclose till 1897. Up to that time the officers of the companies can, within certain limits, do what they please with their earnings; after that the Government claims will have so accumulated that, unless some funding arrangement is made, they will completely swamp the stock, and render it alike powerless and valueless. With a short-sighted policy on both sides, the Government might insist on its full claims and technical rights, but meantime the management could pocket a large part of what was valuable before those claims or rights could be enforced, and leave the property so depleted as to be of little value.

What is clearly seen in this case really happens in a large number of other cases where it is not so obvious. If a railroad manager is so situated that his object is simply to have a large current income at his disposal, he can often best secure this by high rates for local traffic, by postponing repairs which must sooner or later become necessary, or by borrowing money to pay for current expenses and charging the whole to capital account. In any of these events the permanent interests of the property will suffer; but if his connection with it is only temporary, he cares comparatively little for that. If, on the other hand, he is considering the future as well as the present, he will build up the local business of his railroad, even by rates which may seem to involve a slight loss for the moment; he will make such repairs as are necessary to keep the road in first-class condition, and will have no inducement to charge them to an account to which they do not belong. By such a course the public interest is protected, by any other it is sacrificed.

The case of the Pacific railroads has its widest importance as furnishing one more illustration of the ways in which the interests of the investor coincide with those of the public. As a mere matter of financial outlook, the efforts of Mr. Adams for the security of the property-holders promise better for the Government than any of the schemes of those who look at the matter from a purely political standpoint. If this is true in questions of finance, there is every reason to suppose that the same thing will be true in the broader questions of rates and facilities. The advocates of State railroad management fail to see that, under any system of government which we are likely to have, the aims of the authorities are pretty certain to be short-sighted. To make as good a showing as possible when in power, and to leave matters in uncomfortable shape for one's successor on going out of power—such is the combination of principles which confronts a national administration. Even if there were little or no corruption in State railroad management, there would be an almost irresistible temptation to doctor the accounts in such a way as to give the existing administration as much as possible of the disposable receipts, and saddle the expenses upon its successor—to give lower rates or to build new lines, not so much with regard to the wants of trade as to political capital. We do not need to go further into this aspect of the subject. It is enough to contrast the effects of management for the future, as represented by the Union Pacific, with that of management for the present only, as exemplified on so many other roads; and then to ask which of these methods is likely to be encouraged by a further infusion of politics into railroad administration.

THE SENATE AND THE TREATY.

The report of the Senate Committee on the Fisheries Treaty takes three positions which are new to the history and policy of the country, and which accordingly ought to arrest the attention of every thoughtful citizen. The first is, that the President had no right to appoint plenipotentiaries to negotiate a treaty while Congress was in session, without first asking the advice and consent of the Senate and communicating the names of the negotiators to that body. It is not insisted in express terms that such proceeding on the part of the Executive is unconstitutional, but that it is unwise and fraught with grave dangers. "It is not difficult to see," says the report, "that, in evil times, when the President of the United States may be under the influence of foreign and adverse interests, such a course of procedure might result in great disaster to the interests and even the safety of our Government and people." The minority of the Committee enumerate 423 appointments of negotiators to frame treaties and conventions with foreign governments without the concurrence and advice of the Senate or the express authority of Congress, as against thirty-five appointed with such advice and consent. A considerable number of the former class of appointments were made while the Senate was in session, but it does not appear that the President's right to make appointments in this way was ever before called in question. Perhaps it never happened before that such appointments were made "in evil times," or by a President who was "under the influence of foreign and adverse interests."

The second novelty discovered by the Committee is that the fishery dispute is not a fit subject for negotiation at all. This conclusion, the gravity of which cannot be overestimated, is stated in these words: "In view of the plain history of these transactions, and of the matters hereinbefore stated, *it does not seem to the Committee that the existing matters of difficulty are subjects for treaty negotiation.*" The matters hereinbefore stated are principally negotiations extending over a period of more than a century. It is easy to say, if the Committee are so minded, that these negotiations have at last got in such shape that no further negotiation is necessary, but to say that the fishery question is not a fit *subject* for treaty negotiation is simply to affirm that we are superior to the rules that govern civilized nations. We may be so convinced of the uselessness of further negotiation that we may elect to take the consequences, or, as the Committee say in another place, "decline at whatever cost to enter into new engagements with the British Government." We may do so under a conviction that justice cannot be secured by further negotiations, but the Committee go much further when they say that the existing matters of difficulty are not even the subjects of negotiation. Such a position puts the United States distinctly outside the pale of civilized nations, since civilization now, and ever since the predatory period, has recognized the equal rights of nations to their opinions of their own case in all matters of difficulty whatsoever. The peace of the world rests squarely on the recognition of such equal rights, and the mutual acknowledgment that the claims on one side are as good as those on the other *prima facie* and without exception. If the Senate Committee's position is to be taken by the United States, it follows that arbitration should also be rejected, because arbitration requires preliminary treaty negotiation.

In fact, the third position taken by the Committee excludes arbitration as well as treaty. It simply affirms the duty of the President to put in force the Retaliation Act of March 3, 1887. This act requires the President to make up his mind, upon any state of facts that may arise, whether American fishing vessels have been

unjustly treated in British-American ports, and if he thinks that they have been so treated, it authorizes him "in his discretion" to issue a proclamation closing our ports to British-American vessels, or to prohibit the importation of fish from Canada, or both. The fishermen indicated to the President a year ago that the prohibition of Canadian fish was what they wanted under the Retaliation Act. Since the whole fishery dispute arises from the duty on cod and mackerel, and would never have existed otherwise, we may infer that the Senate Committee would be satisfied if the President would search his own heart and find just sufficient evidence of Canadian injustice to give a monopoly of the fish market to the Gloucester smack owners, but not enough to bar out Canadian lumber vessels. They see no danger in the exercise of such a power, while alarmed at the negotiation of a treaty open to rejection by the Senate.

TREASURY METHODS.

MR. FAIRCHILD has acted very wisely in appointing a committee of Treasury officials to inquire into the methods now in vogue in his Department, and to suggest means whereby they may be simplified. The select Committee of the Senate, known as the "Cockrell Committee," have paved the way for this new Committee, by publishing the result of their investigations, showing in detail all the processes of the intricate machinery at work in the various bureaus and divisions of the Treasury. Instead of preparing himself to resist the changes which are likely to be proposed by the Senate Committee, Mr. Fairchild, it seems, purposes to anticipate them, and, as he has selected for his Committee young men who are not wedded to any existing customs, it is also manifest that he wishes as complete a revolution in the system of public accounting as may safely be made. Mr. Fairchild's chief desire, it is said, is to be relieved himself of unnecessary or unimportant work. Few people understand how arduous are the manual labors even of the head of the Treasury Department. He and one of his assistants are kept engaged during a great portion of each day in issuing warrants, either for the setting apart of moneys into the various funds provided by law, or for the payment of money into the Treasury, or for its disbursement. Under a plan instituted by Hamilton, and upon which he ided himself, the Treasurer can neither ay out nor receive into the Treasury any money, unless he has an order from the Secretary commanding it, which order must be countersigned by the Comptroller and recorded by the Register.

The public business has so greatly increased since Hamilton's day as to make it impossible for the Secretary to inquire into the merits of any case, when these warrants, which are prepared by subordinates, are presented to him for his signature; and the work, therefore, is, and for many years has been, purely mechanical. Money is paid out of the Treasury in two ways. It is either *advanced* to a disbursing officer upon a requisition, drawn by him or by his superior officer, approved by the various officials who have to do with his accounts, or it is paid upon a *settlement* of the accounting officers, who certify the amount to be due to the person in question, and request the necessary warrant to issue. In the first case the Secretary draws the warrant without question, relying upon the safeguards and checks which are indicated upon the requisition. In the second case he merely carries out *pro formâ* the recommendation of the Auditor or Comptroller, who alone knows, and who alone can know, of the propriety of the payment.

Now, the point which it is desired to make here is, that in all cases the responsibility of the payment does not rest with the Secretary, and that his time is too precious to be consumed in carrying out in a mechanical way the virtual orders of those who are acquainted with the true condition of affairs, and who are punished for any carelessness or fraud in presenting it to him. Hamilton regarded the Comptroller and himself jointly liable for an improper payment. In this day a Secretary could not be considered responsible at all, as it is out of the question for him to stop to inquire concerning anything but the presence of certain signatures and initials on the paper before him.

In view of what has just been mentioned, the plan suggested by Mr. Washington, at one time Assistant Secretary of the Treasury, is worthy of Mr. Fairchild's attention. He advocated the disbursement of money by the Treasurer upon a warrant issued by the head of the department under whose control the fund in question might come. In other words, he insisted that as the Secretary of the Treasury could seldom, if ever, properly resist the requests of other heads of departments for the issuance of warrants, and as they, not he, were actually, and indeed should be, held responsible for the propriety of payments which they had requested to be made, these requests should be directed by them immediately, and not mediately, to the Treasurer.

This would be a great and judicious lessening of the labors of the Secretary of the Treasury, and there is no reason to think that any laws of prudence would be violated by thus omitting the supposed safeguards of the Secretary's signature, the Comptroller's counter-signature, and the Register's certificate of registry. The Treasurer would be required to pay money upon the order direct to him of the head of any department, but it could be agreed that this order should be certified by the proper auditor and comptroller who might handle the account upon which it is drawn. Concerning moneys paid upon settlements, it is plain that the Comptroller who certifies the balance, should be allowed to draw his warrant on the Treasurer direct, instead of requesting the Secretary, who never saw the account or any of its vouchers, to join with him in this order.

THE PRESBYTERIAN CENTENNIAL.

A DEEPER significance than was perhaps intended may be seen in the choice by the Presbyterians of the United States of the one hundredth General Assembly of their Church as the occasion for their most conspicuous centennial celebration. Of course, the Philadelphia Assembly of a century ago was far from marking the introduction of Presbyterian belief or the Presbyterian polity into this country. Presbyterian beginnings here can be traced much more than a hundred years back of that gathering. Very early in the history of the Carolinas and Virginia, as also of New York and parts of New England, emigrants from Scotland, the north of Ireland, and from Holland, brought in Presbyterian elements to be slowly disentangled from the religious complexity of the times. It is not, then, the establishment of either Presbyterian doctrines or presbyterially governed churches that the Presbyterians of the nation glorify and commemorate this month at Philadelphia. It is, rather, the rounding out of their ecclesiastical system in this country—the last step which had to be taken to make their polity symmetrical and complete, the perfection of their church machinery—which is the great thing behind this Presbyterian centennial. The salient fact is that a hundred years ago Presbyterianism became essentially the machine it is to-day—always speaking of the polity—for a firm ecclesiastical rule under a representative form of government and with parity of the clergy.

That this description of what took place a century ago is correct is witnessed by the fact that the consolidating and centralizing movement which issued in the General Assembly was opposed, and, for a time, almost rebelled against, by some who dreaded ecclesiastical tyranny. They had enjoyed the freedom and independence of separate synods, and were not anxious to submit themselves to what might turn out to be, under the guise of a national system, a scheme for ecclesiastical domination. That their fears have proved to be, in some respects, well founded, the subsequent history of the Presbyterian Church amply shows. The most important matter all along has been the control of the church courts. Everything else has been subordinated to this by those bent on moulding the Presbyterian Church—as well it might be; for what was the use of arguing about creed and subscription, about temperance or slavery, when possession of the ecclesiastical machine could end all argument? We do not mean to say that there has been no zeal on pure questions of doctrine or morals, but simply that there has been no such zeal as there would have been had not the short and easy way of voting down opponents who could not be reasoned down, been made so ready of application in the Presbyterian system. When a minority has been too strong to be extinguished, the result has been a schism, so that each party might have its own smoothly running machine—as was the case in the division into the New-School and Old-School branches a half-century ago.

Indeed, when we state that the most distinctive thing about Presbyterianism of to-day is its compact polity and vigorous ecclesiastical control, we are not alone saying

that it has pursued its normal development since the General Assembly of 1788, but are simply accepting the words of its most ardent living admirers and exponents. How often have we been told, as, for example, recently by the Chicago *Interior*, that the Presbyterian Church is not afraid of liberalism, because it has shotted guns, in the shape of its form of government, ready to train upon the first liberal who dares to show his head. This is undoubtedly correct, and the only way the situation can be changed is by the gradual enlargement of the younger and liberal element, which is doing a good deal of thinking, though it does keep wonderfully still about it, until the ecclesiastical management falls into its hands. It is a curious thing to find it recently charged that fear of such a consummation is a powerful motive back of the movement for union with the Southern Church. The hope is, so a prominent Presbyterian alleges, to swamp and discourage the Northern liberals by taking in the ultra-conservatives of the South. However that may be, it is already clear that the proposed union is not yet to take place.

It is worth noting that this rigid system of church control, which is so highly characteristic of Presbyterianism, is directed more against opinion—at any rate the expression of opinion—than practice, and, moreover, presses with any weight only upon the clergy and officers of the Church. It is true that a great show of careful oversight of the morals of the laity is kept up. The records of the assemblies are lumbered up with long and solemn deliverances on all moot questions of morals; but there is little pretence, any longer, of enforcing them. Thus, for example, scarce an assembly for the past ten years has failed to condemn the Sunday newspaper, and warn Presbyterians against having anything to do with it; yet Presbyterians openly buy, read, advertise in, own, publish, and edit Sunday newspapers, and the idea of resorting to church discipline, in such cases, appears never to have been thought of. Much the same fate has befallen the strong Presbyterian laws against theatre-going and dancing. In the country they are sometimes enforced; in the city—well, there are obvious difficulties in the city.

It needs but a slight study of Presbyterianism to reveal its marked adaptation to institutions like our own. In a striking way, it parallels our public system of local home rule, under the direction of higher representative bodies. The recent change in the Presbyterian organic law by which the synods are now made practically conterminous with the different States, makes the likeness between Presbyterian government by Session, Presbytery, Synod, and General Assembly still more close to our civil government through town, county, State, and nation. This ready fitting of the Presbyterian system to the forms of our republican institutions has undoubtedly been one of the sources of its power. When we add its traditional and valuable conservatism, its eminent respectability, and the honor it has put upon education, we see abundant reason for its past success, and ample promise of a still more prosperous future. The honorable part played by Presbyterians in our colonial and Revolutionary history will be fully set forth, and with proper mention, in the addresses at Philadelphia. We are not disposed to insist upon the distinction which might fairly be made between the citizen and the Presbyterian, as regards those records of worthy public services with which the Presbyterian name has been connected, and we confidently anticipate many more great benefits wrought for the republic by the able and upright men who will continue to lend the honor of their names to the most republican of our church polities.

THE TAXATION OF HEAVY VEHICLES.

Among the innovations proposed in the interesting budget which Mr. Goschen has just laid before the British Parliament, is a tax upon carriages. The proposal is that all vehicles weighing over two hundredweight shall pay a wheel tax—five shillings for two-wheeled carts, and ten shillings for those having four wheels—and that vehicles weighing more than half a ton shall pay an additional sum of one pound. There is a certain plausibility in the suggestion that as roads are made for carriages, carriages ought to pay for making and repairing roads, a plausibility that led Adam Smith to advocate strongly the system of turnpikes and tolls. In this view, the charge for the maintenance of roads is properly an expense connected with the business of transportation, and should be paid by those engaged in such business, just as much as the cost of horses and harnesses and stabling should be paid by them. But, from a number of causes, turnpikes have become comparatively rare in modern times, and the collection of revenue at toll-gates will eventually, no doubt, disappear altogether.

The chief of these causes is probably the feeling of the "solidarity" of the interests of the community, which is strengthened by the general acceptance of the economic principle of the tendency of profits to equality. Under the influence of free competition, persons engaged in transportation must be content with the average rate of profit, and it is quite impossible for them to retain for themselves the advantages of any reduction of taxes. Whatever relief of this kind they may experience, they are compelled to share with their customers, and the general public is benefited more in this way than it is injured by assuming the burdens which have been removed from the industry of a particular class. So far, therefore, as roads are used for the transportation of commodities, they are a benefit to every one who consumes anything that is transported over them, and, paradoxical as it may sound, teamsters are in the long run no more interested in good roads than other people. As every one is a consumer of commodities, the maintenance of roads is beyond most other ends properly secured by general taxation.

Since the whole community is thus chargeable with this expense, the question seems to become one simply of economical collection, and there are grave objections to a multiplicity of taxation. In general, the more numerous the taxes, the greater the expense to the community of collecting them and the annoyance to the individual of paying them. Special bureaus must be created and special officers appointed. This is particularly the case where the attempt is made to tax personal property, for as this cannot, like real estate, be easily subjected to lien, it is necessary to enforce such taxation by a system of fines and penalties—remedies which no statesman will resort to if he can obtain his revenue at less expense without them.

The transportation of persons is, under existing circumstances, a somewhat different matter. So far as carriages are used for pleasure, a tax upon them would be a sumptuary tax, and, although vexatious, perhaps as defensible as most taxes of that character. So far as the transportation of persons is a business, it would stand upon the same footing as the transportation of goods, were it not for the unfortunate creation of unregulated monopolies from which we are now suffering. The difficulty of competition enables many horse-car lines to make more than the average rate of profit; and since they cannot be directly controlled, there is much reason in amercing them indirectly by making them pay a license fee upon every car. But unless it be desirable to discourage people from riding where their business or pleasure calls them, such taxes are only exceptionally defensible.

For these reasons the "wheel-tax," or tax upon all vehicles irrespective of their character, must be regarded as a reactionary measure; but the tax upon heavy wagons has some features peculiar to itself. Such wagons are very destructive to roads, and the damage which they cause increases at a much more rapid rate than their weight. Now, it is perfectly true that roads are made for general traffic, and that the whole community is interested in the cheap transportation of heavy goods as well as light. It is also true that smooth and hard roads are constructed with the result, if not with the intention, of encouraging heavy traffic. But there is a tendency upon the part of cartmen to abuse these advantages and to load their trucks to the utmost limit. There is no particular reason why immense drays, weighing a ton or a ton and a half, should be constructed for the carriage of a number of packages of goods when it is quite possible to divide the load and relieve both the streets and the horses. At all events, the public is more interested in the preservation of its roads than in the encouragement of this method of transportation, and it is justified in imposing a special charge upon those who engage in it. The end might be accomplished by limiting the weight of vehicles but for the fact that vast masses of stone and iron must necessarily be transported through our streets. The interest of the public in such operations, however, is so remote, and the injury to the streets so direct, that a special tax might very properly be imposed upon them.

Under our present system, the improvement of a street pavement acts as a premium

on its destruction. Fifth Avenue might be taken for a street of warehouses and breweries, to judge from the procession of gigantic trucks passing through it, and such moving masses are almost as dangerous to carriages and foot passengers as locomotives. It is probably impossible to close the avenue to such teams; it would be invidious and perhaps unjust to do so. But their number can be largely decreased by imposing a special tax upon them, and it is quite practicable to require a special license to go upon certain streets. While it might not be worth while to introduce a system of licensing carts, yet, as the system already exists, it may very well be made productive of some revenue instead of being, as at present, productive only of vexation.

MICHAEL HEILPRIN.

How great is the loss sustained by American scholarship through the death of Mr. Michael Heilprin on Thursday last, the general public, owing to the man's invincible modesty, cannot know. To this journal and its readers it may fairly be pronounced irreparable, so largely has he contributed during the past twenty years to whatever reputation the *Nation* may have acquired for literary accuracy or breadth of information. His history was extremely interesting and eventful. He was by birth a Polish Jew, the son of a learned and philosophic father, and the descendant of a long line of Jewish scholars. He never went either to school or to college. His extraordinary attainments as a linguist, and especially as a Hebraist, were the result of home study. His family emigrated to Hungary when he was twenty years old, in 1843, in order to escape from Russian oppression, and he at once plunged, with his accustomed ardor, into the study of the language and history and institutions of his adopted country, and shared in the patriotic fever which culminated in the insurrection of 1848. He opened a bookstore in the town of Miskolcz, where he attracted the attention of the local aristocracy, and wrote revolutionary poems which brought him into relations with the Hungarian chiefs, so that when the war broke out, he was at the head of the literary bureau of the Department of the Interior, and enjoyed the acquaintance and esteem of Kossuth.

When the Revolutionary Government was overthrown, he made his escape to Paris, but, finding it difficult to make a living there, went back to Hungary when the vigilance of the Austrian authorities had somewhat relaxed, and opened a school; but the Austrian régime he could not endure, and he resolved to seek his fortune in England or the United States. He went to England in 1856, having thoroughly mastered the language, and there joined Kossuth, who gave him a letter to Mr. Seward; and the advice of William Henry Channing, then in Liverpool, decided him to come to this country. He settled at first in Philadelphia, where for two years he supported himself somewhat precariously by teaching. He removed to New York to become connected with the 'New American Cyclopædia,' which had then reached its third volume. The revision of historical, geographical, and biographical articles was intrusted to him from the start, but he also contributed to the work a large number of original articles in these branches, the most important of which is the one on "Hebrews." This connection lasted until 1863, but was renewed in 1871, when a second edition engaged him till 1876.

Of his truly herculean labors on the successive editions of the Cyclopædia, we can convey but a faint idea. So far as his direct contributions were concerned, they tended to round out the symmetry of the scheme, bringing into their proper place countries and men and incidents hidden from the Western world by unfamiliar tongues. In point of justness and authenticity, they were not outranked by any compiled by the staff of the Cyclopædia. But the greatest service which he rendered was in verifying what seemed doubtful, and in giving consistency to the whole, as if the production of one man. It is safe to say that no other similar work of collaboration published in the English language has ever had this merit in so high a degree—in which, for example, there was a uniform spelling of proper names, a uniform date for the same event, however often mentioned, a uniform system of transcribing words (especially proper names) from foreign languages not using the Roman alphabet. To be ever on the alert for the errors of writers over whom he had no control, to remember what had gone before, to guard against mistakes of pure accident on his own part—to know where to turn for the latest authority, to compare and decide between the authorities themselves, always at odds with one another—to find *time* for all this—was a standing miracle to those who had glimpses behind the scenes.

In 1879 Mr. Heilprin published the first volume of his 'Historical Poetry of the Ancient Hebrews'; the second appeared in the following year; the third he has left behind him unfinished, in manuscript. He was in part prevented from completing it by the weight of the tasks which he assumed in connection with the migration of persecuted Russian Jews to this country. He was especially active in bringing about for them the establishment of agricultural colonies in Oregon, Dakota, Kansas, and New Jersey. These efforts were only partially successful, mainly owing to insufficient financial support.

Mr. Heilprin's connection with the *Nation* began at the very beginning, in 1865. From that time on, quite to his death, its readers had the benefit of his extensive command of all the leading tongues of modern Europe, besides the Latin and Greek classics, the Hebrew, and other Oriental speech. Of the eighteen which he could have enumerated, he acquired the most in early life, but he had taken up the study of Rumanian shortly before his last illness. If he was not equally at home in all, each served him as a tool whenever needed. His use of the English, if not always idiomatic, was scrupulously grammatical, and he was a careful critic of English style. But remarkable as all this was, the most striking of his natural gifts was his power to arrange events in their chronological order, and to carry in his mind, ready for instant production, name, place, date, and circumstance, together with an incredible amount of statistical information. If, however, to remember accurately what he learned, and so much of what he learned, was admirable, the wonder of it was increased by the difficulty of acquiring. For years by far the larger part of his reading was done for him by others. Those who know the difference in time between reading for one's self and being read to, will appreciate the hindrance which weak eyes opposed to the effort to keep up with the literature and the news of the day.

The moral side of this great talent lay first in the singular modesty of its possessor. There was not an atom of intellectual pride or arrogance about him, not a particle of jealousy or envy, nothing but thankfulness for suggestions of improvement in expression or corrections of slips of the memory or of the pen. He never showed the least sensitiveness on account of editorial revision of his contributions to the *Nation*. His love of accuracy partly had its roots in a disciplined mind, but partly it had also a moral significance. He wished to be absolutely just, and the qualifications and allowances he made were the chief drawback to the fluency and effectiveness of his English writings. As he wrote anonymously for the *Nation*, there was the secondary but weighty motive not to let its reputation suffer by any careless or too sweeping statement.

Broader-minded than Kossuth, he never took any pains to conceal his abhorrence of American slavery; and we recall a most elaborate article in the *Tribune*, in 1860, controverting a prominent Jewish rabbi of this city who attempted to prove from the Bible the righteousness of slavery. He shared in the excitement of the civil war, and when it was over and new issues arose, he gave his sympathy without stint to the cause of reform. Upon domestic topics, however, he seldom or never wrote, but he was always eager in expressions of his gratification at being a contributor on other subjects to a journal of whose general aims in home politics he cordially approved, and in whose success he always displayed the keenest interest, and to which he rendered services such as only those who profited by them, as we did, can appreciate. His modesty was so great that he was embarrassed by the faintest meed of praise, and in paying even this feeble tribute to his memory we feel as if we were bestowing on him a fame from which, if living, he would have shrunk.

BRANDES AND HIS DETRACTORS.

WASHINGTON, May 7, 1888.

THE notice taken in No. 1091 of the *Nation* of Dr. Puls's charge of plagiarism against Dr. Georg Brandes prompts me to throw some light on the matter. Dr. Brandes, who has only just entered his forty-seventh year (having been born at Copenhagen February 4, 1842), is the author of some twenty volumes of literary and philosophical criticism, which have earned for him the reputation of being the foremost critic, not only of Denmark, but of the whole Scandinavian North. That this considerable position has been obtained, not by barefaced fraud, but only after serious study and commensurate labor, seems reasonable to a candid mind, and it is well known in Copenhagen that Brandes has not unfrequently pushed his remarkable power of application to such an extent as to threaten serious impairment of his nervous system. His first book was printed in Copenhagen twenty-five years ago, but it was not until 1872 that his literary work was made familiar to German readers through translation. Since that year, however, there have been published in Germany ten distinct works from his pen, together with revised and rewritten editions of three of them, besides numerous contributions to the leading periodicals and to the important daily journals of Germany and Austria. This author, it will be observed, therefore, emerged from the "comparative obscurity of the Danish language" into the searching light of German criticism no less than *sixteen* years ago, and yet it has only now been discovered that he is a "literary plagiarist of the worst sort." It is not credible that Dr. Brandes's various works

could have been widely read and favorably commented upon in Germany during a long term of years, if this allegation had any foundation in truth. But this denunciation is not based upon an examination of his entire German work, nor even upon a critical scrutiny of the very considerable portion of it which deals with German literary history, although the title given to his article by Dr. Puls would demand this, but simply upon a comparison of two translations (one by the author himself) of a single work. The history of these two translations may help to exonerate the author from the charge preferred, and prove an interesting illustration of a certain aspect of the right of literary property.

On November 3, 1871, Dr. Brandes began a series of lectures at the University of Copenhagen, which were published in Denmark under the title: "Hovedströmninger i det 19de Aarhundredes Literatur" (Main Streams in the Literature of the Nineteenth Century). They have since become widely known through translations into various languages. The first volume was issued in 1872, and the second, third, and fourth volumes followed at intervals of one year. They were all translated into German by Dr. Adolf Strodtmann, under an arrangement with the author, and published by F. Duncker of Berlin, the first volume in 1872, the second, under the sub-title: 'Die romantische Schule in Deutschland' (The Romantic School in Germany), in 1873, the third volume in 1874, and the fourth in 1876. During the ten years following the publication of the first volume, Dr. Brandes had, between 1872 and 1876, made annual visits to Berlin of some months' duration each year, while from the autumn of 1877 to the spring of 1883 inclusive, that city was his permanent place of residence. One result was that he acquired a competent and fluent knowledge of the German language. The intervening years had also wrought considerable changes in his views and opinions. Even in 1877 he had issued, in Danish, a new edition of volume i of his work, rewritten and materially altered. When, therefore, he was urged to have the four volumes translated by Strodtmann (who had died meanwhile) reissued, because they were out of print, he objected to any further circulation of that early translation, and made arrangements with Veit & Co. of Leipzig for a new edition of the entire work, to be prepared by himself. Of this the first volume appeared in 1882, while volume v, which had been originally published in Copenhagen that year, appeared in Germany for the first time in 1883, and the second volume, 'Die romantische Schule in Deutschland,' was issued in December, 1886, the general title of the series having been slightly altered to read, "Die Litteratur des 19. Jahrhunderts in ihren Hauptströmungen" (The Literature of the Nineteenth Century in its Chief Currents).

In the meantime a Leipzig bookseller, H. Barsdorf, under pretence of having bought from Brandes's former, bankrupt publisher, Duncker, the right to Strodtmann's translation, reprinted the first four volumes of the work in spite of the author's protest; and, without a vestige of authorization from Brandes, he also published the fifth volume in a translation purporting to have been made by a certain W. Rudow, which latter outrage the author was helpless to prevent, there being no literary-property convention between Germany and Denmark. The publisher then reduced the price of the entire set of five books to considerably less than the price of the three volumes which had been printed of Brandes's own translation, hoping in this way, apparently, to undersell the authorized edition. Veit & Co. thereupon made public the fact that the Strodtmann translation no longer presented the author's convictions, and that it was his desire that the German-reading public should become acquainted with the views which he now entertained, through his own revision of his early work; whereupon Barsdorf (more shrewd than scrupulous) retaliated by bringing suit against Brandes's publishers for an injunction as regards the second volume of the author's edition, upon the ground that it was a partial reproduction, and therefore an infringement, of Dr. Strodtmann's translation, published, it will be remembered, fourteen years previously. This question was submitted to a *Literarischer Sachverständigen-Verein*, or Commission of Literary Experts, appointed by the court, under authority of the copyright law of Germany. This Commission rendered a *Gutachten* (opinion) on March 7, 1887, which the plaintiff hastened to print, with a lengthy introduction of his own, and to distribute gratis throughout Germany and Denmark.

Want of space will not allow a thorough analysis of this document, which should be classed as a curiosity in the literature of literary property. The method of procedure adopted by the Commission seems to have been a purely mechanical one. Instead of judging Brandes's work from a literary standpoint, the two books are compared for the purpose of tabulating and counting the words and phrases similar in form or meaning; no regard being had to the context, nor any attempt made to discover how the resemblances noted might be explained. By a comparison of the number of pages, the number of lines to the page, and the number of syllables to the line, it is computed that his book contains about one-third more matter. But this crude way of mathematically determining the amount of original material fails to take into account the omission of parts of the old work, supplied by new text. It is admitted, however, that the excess (which consists of new matter scattered throughout the book) amounts to 135 pages—that is to say, an addition of more than half as many pages as the Strodtmann volume contained. But the Commission declare that these "do not at all come into question"; a remarkable statement, when the very question before them was whether Brandes's book was an original work or a copy of another, and when, moreover, it was known to them that his desire to incorporate this new material was one reason for the publication of the new edition. The Commission decide that some 255 pages of the author's book are *more or less* consonant with Strodtmann's translation, and refer to a "Beilage" where the pages of both books are compared and the proportion of like or unlike parts is pointed out. An examination of this appendix shows that no allowance has been made for the numerous citations from other authors, which the nature of the work (a literary history) demanded. These, if correctly made, would of necessity be alike in both works, and ought, for that reason, to have been excluded from the table. But in cases of incorrect citations by Strodtmann, where Brandes has, after troublesome verification, *corrected* the cited passages, he is scrupulously credited with original labor to the extent of the *number of words* actually altered, and they are carefully counted and deducted from the pages said to have been copied! The conclusion as to the amount of matter copied is qualified also by the admission that the generally similar portions contain "actual or apparent deviations," which are more particularly specified as consisting, (1) of transpositions of sentences or paragraphs, and (2) of alterations of words or phrases. The possible purposes of the transpositions are not inquired into by the Commission, who seem to have had no idea that they could be in any way concerned with the originality of treatment; while the verbal alterations are dealt with in a second "Beilage," which is to the following effect:

"Within that portion of Brandes's work which in Appendix A is noted as being wholly or almost wholly similar to the Strodtmann translation, are found, however, certain deviations. These are partly only the exchange of one word for another, an alien word replaced by one thoroughly German, or one less pregnant by one more forcible; transpositions in behalf of an improvement in the style, or corrections of misprints; or, partly, such as serve to supplement, illustrate, or correct Strodtmann's text, and are, therefore, not merely formal, but of an essential nature. They consist mostly of only one, two, or three words, occasionally of an entire line, sometimes of two or three lines. The essential alterations can, therefore, at the highest, be estimated at but 12 pages, while those merely verbal amount perhaps to 3 pages, or both together to 15 pages; so that the 255 pages of identical text is reduced to 240."

In other words, the careful and laborious correction of errors, both of translation and of citation; the thoughtful weighing of words and phrases in order to improve the expression, the word-for-word, line-for-line examination of the original—which resulted, according to a deposition filed in the court by the defendants, in no less than 770 deviations from Strodtmann's text—are not looked upon and weighed as evidence of such literary labor as would characterize Brandes's translation as an original work, but are adjudged, *after an arithmetical calculation*, to reduce the amount of similarity between the two editions, and, in consequence, the author's alleged plagiarism of the translation of *his own work*, exactly five per cent. A commission of literary experts indeed!

When this document appeared, Dr. Brandes was absent on a visit to Russia; but upon his return to Denmark he printed a reply, dated June 22, 1887, and addressed to his publisher. He explains that when he wrote the original work, he was engaged in active warfare with an intellectual tendency prevailing in Denmark, and that his book was a participation in that strife. "It was a polemical work. I attacked the dead German Romanticists in order to strike, through them, the living Danish Romanticists. I depicted them in order to combat them; and every line was calculated for Denmark and Danish conditions." In the new work, which was intended for a wider field, the relation between Danish and German Romanticism, dwelt upon before, is subordinated, and relegated to an appendix, this being one of the transpositions considered by the Commission as having no import. But the chief difference between the two editions is, that the æsthetical point of view has become changed since the first appeared, in 1873.

"At that time," Brandes says, "I valued in literature, above everything, the intellectual tendency. My conception of freedom and progress was still doctrinaire. My own position of strife rendered impartiality difficult, so that my judgment of the Romanticists was determined by their religious or political attitude, comparatively little being said concerning their talent. This is now entirely changed. By additions, omissions, alterations without end, very often of small extent, but of weighty import, a wholly different poetical, and a new historical, interpretation is presented. The criticism of men like Görres, Novalis, or Brentano is entirely changed. Injustices are removed; fresh studies have placed the historical characters in a new light; every judgment passed is examined anew, and amended wherever it no longer holds good."

Brandes gives several pages of interesting examples, which demonstrate that alterations

which the Procrustean Commission of Experts estimated as so many words or lines altered, really prove serious modification of his contemplation of life and poetry. Furthermore, there is a great difference in the method of presentation in the two editions. "In 1871," he continues, "my whole bias was metaphysical. I looked out over the personalities; they were, for me, only the organs of ideas. . . . Only for the *currents* in the world of thought had I any interest. The individualities were carried along by the flood; they were only the mouthpieces of the ideas." Therefore, in the first volume of his work there was not a single biography; and such as were included in the old edition of the second volume

"are short and incomplete, and—what is most significant—are throughout tacked on at the end as less weighty supplements to the descriptions of the works. First the works are examined; then, when the whole intellectual life of the person is characterized, follows a short biography of the individual in whom all that was depicted had its root. . . . The book does not contain a single portrait. I had not confidence in my skill to paint one. Only long after did I learn that in this direction I possessed a certain strength, and as I no longer nourished an Hegelian contempt for the individual, and no longer believed that the abstract world-spirit produced the works, I began to study the historical personages and to show that their productions resulted from their lives."

It is owing to this that the work is reconstructed, not only by interpolations and transpositions, but by a "series of delicate touches," the effect of which Brandes summarizes in the following words: "The object of the work, which was primarily agitative, became entirely scientific: it *was* Danish, it *is* universal. The conception of poetry and art is radically changed, and, finally, the interpretation of the connection between ideas and personalities has been reversed; to which changes the altered composition responds."

As regards such similarity as may exist in the texts of the two translations, Dr. Brandes justly claims that, owing to the close relationship between Danish and German, it was in many cases impossible to represent the original otherwise than by such literal translation as would be identical. The following passage will demonstrate this at a glance, and it is only one among numerous examples which might be chosen:

"I gamle Dage betragtede man Jeg'et, Sjælen, Personligheden som et Væsen, hvis Egenskaber var dets saakaldte Ævner og Kræfter. Ordet: Ævne og Kraft betyder jo imidlertid kun, at jeg har Muligheden til visse Begivenheder, at se, at læse o. s. v. Mit sande Væsen bestaar ikke af Mulighederne, men af disse Begivenheder selv, af mine virkelige Tilstande."

"In alten Tagen betrachtete man das Ich, die Seele, die Persönlichkeit als ein Wesen dessen Eigenschaften seine sogenannten Fähigkeiten und Kräfte waren. Das Wort: 'Fähigkeit' und 'Kraft' bedeutet aber ja nur, dass die Möglichkeit für gewisse Ereignisse, des Sehens, Lesens u. s. w. in mir vorhanden ist. Mein wahres Wesen besteht nicht aus den Möglichkeiten, sondern aus diesen Ereignissen selbst, aus meinen wirklichen Zustanden."

The two objects which the author had in view were: (1) to reconstruct the Danish work, and (2) to reproduce the result in the best German possible. Working, therefore, with the former translation before him, if it seemed impossible to improve upon the expression used therein (and Strodtmann was a writer of considerable talent), he had either to allow it to remain, or deliberately choose a less suitable rendering. And it should not be forgotten that the construction was originally Brandes's own. As he, with much justice, remarks: "It is not I who have followed the translator, but he who has followed me." And any one at all familiar with Brandes's work, and cognizant of his pride in maintaining the original and brilliant style which has earned him his reputation as a writer, will easily believe his statement, that he has not accepted a single line of Strodtmann's translation until thoughtful consideration has demonstrated its fitness. When Strodtmann wrote: "Aber Capri! Es liegt gleichsam eine rythmische Musik in den Konturen des zackigen Felsens," he failed to convey in German the impression produced by the Danish original, which he nevertheless had closely followed. Brandes produced the desired effect by: "Aber Capri! Wie ein rythmisches Lied steigen und senken sich des Felsens Konturen"—an alteration in the words for which the Commission would give him little or no consideration, but which was evidently the result of careful deliberation. In conclusion, Brandes indignantly exclaims: "Let alone that the laws have a *lacuna* here, every man who has his heart in the right place will concede that it is a serious wrong done to an author when, against his will, his books continue to be published in a form which he no longer recognizes. The books bear *my* name, are sold upon *my* name, and teach things which *I* do not desire to teach. Is it not a shame and an injustice?"

LOCAL GOVERNMENT AND THE BUDGET.

LONDON, April 30, 1888.

THE House of Commons has been mainly occupied since Easter with the Local Government Bill and the Budget. The second reading of the former bill was debated for six nights, a longer time than was expected after the cordial acceptance of its principle expressed by the Opposition leaders when the bill was introduced. The rank and file, however, demanded a full opportunity for criticism, and a discussion long enough to inform the country on a measure of a complicated character, far-reaching in its effects, and yet not calculated without explanation to attract popular attention. The broad complaint of the critics of the bill is, that in spite of the establishment of county councils, elected for the most part on the principle of representation, the most crying evils of the existing system will remain unredressed, and the positive advantages to be aimed at in any reform will not be attained. The surviving historical divisions are the county and the parish. Round these associations cluster and sentiment clings. An Englishman is proud of his county, and thinks of his parish as his home. But between and among these are statutory areas of recent birth: the union, an aggregate of parishes, often regardless of the county boundary, and now the unit of poor-law administration; the highway district; the school-board district; the local board or sanitary district, not universal, but scattered over the county and defined without reference to the parish, the union, or the county. Hence there is a chaos of overlapping areas, multiplied petty authorities, different franchises, and separate rates. That is the great evil. The aim of the local-government reformer has always been to have one franchise and one rate, and not more than two areas of administration, the larger being an aggregate of the smaller.

But, it is said, this bill does not remove any one of these concurrent authorities, with their independent areas, franchises to officials, registration, and rates, but only adds another. It does nothing to simplify the system. It does little to place the business of local government in the hands of representative bodies popularly elected, because it leaves the bulk of it, such as poor-law administration, in the old hands. While it establishes new bodies with a large area of jurisdiction, too large for the laborer to take a share in the business, it does nothing to revive the public life of the parish. Again, fault is found with the tenderness which the justices, the present county authorities, are dealt with. The justices are appointed by the Lord Chancellor on the recommendation of the Lord Lieutenant of the county. They have a very wide and important criminal jurisdiction, which it would be beyond the scope of the bill to interfere with. But their most important function of local government is the management and control of the police. This, instead of being transferred to the new county councils, is only to be shared by them. Then, the constitution of the new councils is objected to. Three-fourths of the members are to be elected, and they select the remainder, in the same way as the aldermen in the municipal councils, an alteration introduced into the Municipal Corporations Act of 1835 in the House of Lords on the motion of Lord Lyndhurst. The effect of this is to enable a bare majority, if the council is divided into two parties, to transform themselves into an overwhelming majority, by nominating all the selected members. Still further, the licensing clauses are extremely unpalatable to the majority of the Liberal party, inasmuch as they are said for the first time to give statutory recognition to a vested right in the holders of annual licenses, entitling them to compensation if the licenses are not renewed.

Here is a large bundle of objections, each full of importance, and the number might be increased. It is not wonderful that meetings of the Liberal party were held to press for a full opportunity for discussion. Two meetings were held in the House of Commons and the National Liberal Club. They were fastened upon as signs of mutiny in the Gladstonian ranks. In truth, they deserve to be mentioned for a different and an opposite reason. They must have reminded old members of old times. It was the first occasion during either the present or the last Parliament that a subject of great moment not relating to Ireland had engaged the attention of the whole party. The Irish members were not present, and the painful kind of unanimity which the Irish policy of the Government produces on the opposite benches did not prevail. There was that identity of sentiment and difference of opinion (though the differences were not great) which are said to produce harmony in conversation—and I do not think that if a supporter of the Government had been present, he would have derived much encouragement from the proceedings.

While, however, the discussion on the second reading has been eminently useful and instructive to the country, it is no less certain that Mr. Gladstone did well in taking the first opportunity of giving an ungrudging approval to the principle of the bill. It is a radical bill with all its shortcomings. It does, indeed, fall very far short of the complete reconstruction of local government which it is sometimes represented to accomplish. But the establishment of a county council with a popular basis of election introduces a principle which must result in complete and radical reform. The importance of the new elective bodies will steadily increase, and they will inevitably draw all the administrative business to themselves.

On the bearing of the Local-Government Bill upon Irish politics I shall have a word to say presently. The other business which has chiefly occupied the House has been the Budget

Bill, which is this year a measure of much more than usual importance. Finding himself in possession of a handsome surplus, Mr. Goschen has rightly embraced the opportunity of effecting a long-projected reform. Local rates admittedly fall too exclusively on real property. As a palliation to this inequality, grants in aid of certain local rates have been made from the Imperial Treasury, a system which led to extravagance and was universally condemned. The budget proposes to hand over to the local authorities a large slice of imperial taxation falling on personal property. The relief is devised on so liberal a plan as to silence the opposition to the encroachment by the county councils on the administration of the justices, while the acquiescence of the general taxpayers in the whole scheme is conciliated by the remission of a penny on the income tax. To make all this possible, some fancy taxes are laid on, such as the wheel tax and the tax on bottled wines, which are unpopular, but of which I shall not here say more. The most serious grounds of criticism are these:

First, the main source of relief is the Probate Duty, one-half of which is to be handed over to the counties. The standard of distribution is to be the amount of indoor pauperism in each locality. This proposal, it is said, rests on no principle. It does not substitute a county budget, with its local responsibility and inducements to economy, for the present subventions in aid of rates, but continues the evil principle in perhaps an aggravated form.

The second grave objection to the Budget was the subject of Mr. Gladstone's attack on Monday. The death duties payable by land and personalty are very unequal. Speaking roughly, they are three per cent. on the total value of the personalty, as against one per cent. on the life interest in real property. The equalization of these duties was the main feature of Mr. Childers's budget, on which Mr. Gladstone's Government was turned out in 1885. In a budget which professes to redress the inequalities of local taxation between the two descriptions of property, it was natural to look for a settlement of the imperial taxation also, and Mr. Goschen does profess to have made the two equal—partly because half of the probate duty is to be paid to the counties, leaving only one and a half per cent. instead of three—an argument difficult of digestion by the owners of personalty—and partly by raising the succession duty on land by one-half per cent. In an elaborate argument to show that the burdens were now equal, Mr. Goschen in his budget speech took no notice of the fact (and it was a strange omission) that the duties are only levied on the life interest in land, and the instalments are spread over several years. Even the financial authorities in the press which support the Government, are unable to defend his contention that the burden is now equal, and that there is no longer any injustice to redress. The unfairness of the incidence of the tax has never been pointed out with greater force than by Mr. Goschen in a book published in 1871. To a Liberal financier, no principle can be much more sacred than equality of taxation; and if Mr. Goschen is constrained to abandon it now, it is one proof among many that even so moderate a type of Liberal as he was cannot join a Tory ministry without sacrifice of a serious kind.

The discussion on the English Local-Government Bill was opportunely followed last Wednesday by a debate on an Irish County-Government Bill introduced by the Irish Nationalist party. The Government adhered to the position which they have recently avowed, that in the present state of Ireland the reform of local government must be indefinitely postponed—in other words, that the Irish people must kiss the rod and abjure the claim for a measure of self-government before any improvement in local government is conceded. This is consistent with the programme which Lord Salisbury announced more than two years ago, when he prescribed twenty years of resolute government as the cure for the distemper of Ireland. It is not consistent with the expectations held out by the Government on their accession to office, still less with the pledges and professions at the last election of—I think I may say—the great bulk of the Liberal Unionists, as well as of many Conservative candidates. It was a common theme of election placards that the Unionists were the true Home-Rulers. That, however, is not the instructive point of the present situation. The dissentient Liberals have so often been placed upon the horns of a dilemma, as they were by Mr. Gladstone in the debate on the death duties, that habit has made the position tolerable if not comfortable. Former professions are easily forgotten by politicians, and they take the chance of their being forgotten by constituents before the next election.

It is true that no single circumstance has occurred, such as an increase in crime, which can give any color to a change of policy. The course of events has been such as must have been clearly foreseen. Yet any development of local institutions in Ireland would, in every local centre, place in a clearer light than ever the national character of the demand for self-government, and would strengthen the organization for obtaining it. Therefore the Government dare not meddle with the subject. Now, the reform of county administration in England will compel more attention than ever to the predicament of Ireland. There those local institutions which, even in an unregenerate shape, are cherished in England as the nursery of political liberty, hardly exist, and their place is supplied by the centralized system of the Castle, which Liberal Unionist leaders have denounced in such powerful and scathing language. The Liberals believe that the contrast will be too much for the stomach of the British nation. If the present system of governing Ireland is proved to mean the denial of all free institutions, they will reject it.

It is a noteworthy fact that this view is already taken by two groups of the supporters of the Government in Parliament. The small knot of members, not all returned by Irish constituencies, who specially represent the views of the Ulster Liberals, regard the reform of local government as a primary and essential object; and some of the most prominent, respectable, and high-principled of the English Unionists have declared not less loudly that reform cannot be, as the Government say, indefinitely postponed. The sagacity of Lord Randolph Churchill has made him the powerful advocate of the same opinion. I do not mean to say that anything has occurred to shake the offensive and defensive alliance of which antagonism to Mr. Gladstone is the bond and principle. But remonstrances, based on strong conviction, in several independent quarters of the Government camp against the indefinite postponement of reform will prove to be a potent dissolvent of the policy of the alliance, if not of the alliance itself. When reform is taken in hand, though it may begin from below and not from above, daylight will be seen, and a settlement of the great question will be brought nearer.

C. D.

SOME THOUGHTS ON FRENCH AFFAIRS.

London, April 30, 1888.

Nothing is further from my intention than to trouble you with anecdotes (probably apocryphal) about Gen. Boulanger's character or career, or with speculations (likely to turn out unsound) about the success or failure of his schemes. My wish is to bring before the attention of your readers one or two reflections on the state of things in France which are obvious enough in themselves, but which, because they possess rather a permanent than an immediate interest, appear to escape the notice of the able editors and energetic correspondents who guide the opinion of England, and, I suppose, to a certain extent, of America.

One fact about Gen. Boulanger's position is hardly disputed, and is of primary importance. His influence arises not from the notoriety of his talents (for no one really knows the extent of his capacity even as a military commander), nor from any striking service which he has rendered the country (for even his admirers do not ascribe to him services greater than have been rendered to France by other meritorious officers), but from his being the representative of popular dissatisfaction with parliamentary government, or, to borrow an expression from Swiss politics, "representative democracy." The General's popularity means, then, the unpopularity of government by the Chambers. The General's triumph does not necessarily mean the nominal overthrow of the republic; still less does it involve reaction against what Frenchmen consider democratic institutions; but it does mean the subversion of Parliamentary authority—it means the destruction by the French people of representative government as understood in England and America. That this is so can be denied neither by Boulanger's adherents nor by his opponents. It is worth while to reflect for a few minutes on all that this fact involves. It suggests at least three important considerations.

First. The triumph of Boulanger will be the severest blow to the credit of free government which has been dealt to it for years. The third French Republic has certainly not had a brilliant career; it has failed to produce statesmen of marked talent or high character; under Republican administration French finances have, it is said, been thoroughly ill-administered, and the reputation of French public men has been greatly tarnished. At this moment the man who is reputed to be the most capable of Republican statesmen cannot lead the Republicans, because he lacks the weight of character necessary for a leading statesman. Yet when everything is said against the republic which can be urged by the most severe of candid judges, fairness compels the admission that Republicanism has given France more of the substance of self-government than France has obtained under any constitution which has existed since 1789. The nation has for seventeen years been "mistress in her own house." Freedom of speech, freedom of the press, freedom of meeting, and the other fundamental rights of freemen have been for the first time in French history a reality. Boulanger's triumph, if it takes place, will show that the mass of Frenchmen value self-government far less than good administration and national prestige; his present popularity is sufficient to prove that thousands of French citizens are prepared to put liberty in peril on the chance of obtaining either improved administration or national glory.

It were in some respects a great relief to all persons who value the success of popular government to believe that the main cause of the

support given to the General is the hope that he will recover Alsace. To rush into a desperate struggle with Germany in order to restore to France Frenchmen who are German subjects against their will, would be, if a folly, yet a kind of generous madness. But any one who has read French papers with care will with difficulty believe that popular desire for "revenge" contributes more than a very subordinate element to the General's influence with the masses. The wish to get rid of government by an assembly is, one may venture to assert with some confidence, the motive which enlists voters in favor of Boulangist candidates. If this be admitted, it follows that the victory of Boulanger will be a blow to the cause of popular government throughout the world.

In England we are accustomed to think that we are unaffected by foreign opinion. In one sense this is true. Englishmen are ill-informed about foreign politics, and do not pay much attention to the speculations of Continental writers. But English beliefs on political matters are greatly affected by the course of events in foreign countries. Whoever is old enough to look back to the state of sentiment prevalent in Great Britain from say 1856 to 1864, will recognize the fact that the course of events in other lands told strongly in favor of Conservatism in England. The revolutionary fiasco in 1848, the predominance of Southern influence throughout the United States, the apparent success of the Confederacy, and the expected dissolution of the Union, created a condition of feeling which would surprise the Conservatives of to-day. My own firm belief is, that had the Confederacy finally established its independence, the whole modern constitutional history of England would have been altered, through the indirect effect of the conviction produced thereby that the greatest experiment in democratic government which the world had witnessed had ended in failure. Nor can I for a moment doubt that the breakdown of Republicanism in France would retard the progress of popular government throughout Europe.

Secondly. The fall of the republic, if the republic be destined to fall, will be in the main due to the cause which, above all others, has in France been fatal to the stability of free institutions. This is, to put the matter shortly, the inability of defeated parties to acquiesce in the expressed will of the nation. To put the same thing in another shape, all parties in France have been, and are, revolutionary parties. In the early stages of the Great Revolution, the Court played into the hands of the Democrats; the King, and, still more, the Queen, intrigued with Jacobins in order to discredit La Fayette; and the same disastrous game has been played in one form or another ever since, by politicians who might call themselves Conservatives, but were, in truth, reactionaries or conspirators. At the present moment France is menaced with a return to despotism. It might have been expected by any man unacquainted with French history that all good citizens would, whatever their political preferences, rally round the republic in order to resist a movement which threatens to destroy the liberties of the country. What really has taken place is, that the party of every pretender is more than half disposed to aid Gen. Boulanger, under the hope that the general confusion produced by the overthrow of the republic may at last turn out for the benefit of some particular claimant, be he a Bonaparte or a Bourbon, to whose success a given faction is devoted. On this matter English opinion is densely stupid. Moderate men ask why the Orleanist Princes should be banished from France. The reply is, that no government can tolerate the presence of pretenders. Great is the power of forgetfulness, and Englishmen have so entirely forgotten their own history that they cannot understand why the French republic acts towards the Princes of the House of Orleans just as the constitutional monarchy of England acted during the last century towards the Stuarts.

Thirdly. The dislike or indifference with which large classes of Frenchmen regard the rule of the Assembly is merely the most striking example of a sentiment which, however much we may condemn it, is becoming prevalent in various countries of Europe, perhaps in almost all of them. The word "Parliamentarianism" is an awkward term enough in itself, and represents a feeling which has hitherto commanded little sympathy among Englishmen. The term, however, is coming into vogue, and its meaning is well understood in Switzerland, in France, in Prussia: it is the word by which Imperialists, Loyalists, or Democrats designate the weak side of government by an elected Assembly, or, in other words, by a Parliament. There was a time when, to all Englishmen, and to all men in every country who longed for freedom from oppression, Parliamentary government seemed to be the name for an ideal constitution which, wherever it existed, insured to those who enjoyed it all the blessings of freedom and of good administration. To-day it is far otherwise. In every country there are thinkers and politicians to whom Parliamentarianism means the rule of an Assembly torn by factions, whose strife is fatal to the existence of good administration, and sacrifices (as is alleged) to the interest of party the welfare, it may be the existence, of the country. What is the basis of these complaints, how far they may or may not be justifiable, how, if at all, they can be met, are questions with which, to-day, I do not concern myself. My object is not to support or attack any particular theory, but to point to an undoubted fact, namely, that the weakness of the French republic is a sign of the dislike which is spreading, even in Democratic countries, to that direct rule of an Assembly which is denounced as Parliamentarianism.

AN OBSERVER.

Correspondence.

THE AGE OF FREDERICK THE GREAT IN GERMAN LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "C. H. G." (in your issue of May 10) is mistaken in saying that Lessing's fear has not been realized, that the literary age in which he lived might one day be called the age of Frederick the Great.

Chapter xi of Scherer's 'Geschichte der Deutschen Litteratur' has the title, "Das Zeitalter Friedrichs des Grossen." In the notes at page 755 Scherer quotes Lessing's saying, and adds:

"But this warning does not frighten me at all. In the first place, 'Age of Frederick the Great' is a convenient name for the period from 1740 to 1786. And then there really exists a connection between Frederick's sentiments and policy and German enlightenment, between Frederick's deeds and German literature. Kant's and Goethe's testimony is well known, although such testimony is hardly necessary where the facts speak so plainly. I do not believe a word of the widespread fiction, that the growth of literature among the Germans has been quite other than with other nations: with us, also, high literary development depends upon high political development."

Scherer and those who follow him in this are not "flatterers," as Lessing would have it. They see and declare the truth which Lessing failed to see.

ARTHUR H. PALMER.

ADELBERT COLLEGE, CLEVELAND, O., May 12, 1888.

NEWNHAM AND CAMBRIDGE.

TO THE EDITOR OF THE NATION:

SIR: A discussion in regard to the admission of English women to certain examinations and the university degree at Cambridge recently appeared in the *Nation*. In this connection, the following extract from a letter lately received from a Cambridge lady may be of interest:

"In your letter, you ask me to explain why women are not allowed to take the General and Special Examinations. The fact is that a great many rich young men come up to college and do not work hard. They are allowed to take the ordinary General and Special Examinations, which are very easy. They spend a great deal of time in boating, cricket, and games. It has been the custom to allow this state of things to go on, and though many members of the University have tried to put an end to it, as yet they have not succeeded.

"We at Newnham and our friends do not wish our students to take these unsatisfactory examinations, and therefore our students only go in for honors, viz., Triposes. Those who do not wish to go in for honors take the Higher Local Examination, which is much better and more varied than that for the Ordinary Degree. If a better Ordinary Degree were instituted, we should not object to their taking it.

"Many petitions have been sent up this summer asking for degrees for women. It is a very difficult question, for the undergraduates are under very strict rule in their colleges, and there are men proctors to see after them at night, etc. These rules could not be applied to women. Moreover, I do not think we are prepared for a mixed university. What may happen in twenty or fifty years no one can say, but we are not ready for a sudden change yet. It is much better when things come on gradually. The University authorities have been most kind and friendly to us. We seem to have won the regards of many of the best men. Only the other day a very distinguished man in the University, Mr. Coutts Trotter, who was Vice-Master of Trinity College, died and left us 2,450 books from his very valuable library. He had been from the beginning of the College one of our chief friends and advisers. He was our Vice-Chairman, and he was always at our meetings and ready to help us. His loss is indeed a great one, and his place can hardly be filled. He also left us £1,500 in money and many valuable physical instruments. It is indeed very touching to receive such gifts, which recall to us so strongly the giver.

"We feel we have won a place in the University. I would rather wait awhile till the members of the University feel they can do more for us—I mean the University in general, all parties and divisions. Such is my feeling, and I hope and trust all will end well. At present our students have certificates from the Vice-Chancellor, but they are not members of the University, and cannot vote or join in the business of the University. They have passed exactly the same examinations as the men. If the authorities find they can grant the B.A. degree without giving the vote to women in University matters, it might perhaps answer. At present, in a certain sense, we belong to the University, and there is a very good feeling towards the Women's Colleges, both among the authorities and the undergraduates."

Very respectfully, A. H.

CAMBRIDGE, MASS., March 17, 1888.

Notes.

CASSELL & Co. are about to issue a new and revised edition of the novels of Mrs. Elizabeth Stoddard, beginning next month with 'Two Men,' to which Mr. E. C. Stedman will furnish a preface.

A fifth edition of Col. H. B. Carrington's 'Battles of the American Revolution,' revised, and with fresh notes, is promised this month by A. S. Barnes & Co.

Lee & Shepard, Boston, announce 'Noble Deeds of Our Fathers, as Told by Soldiers of the Revolution, Gathered around the Old Bell of Independence.'

Prof. Hosmer's 'Sir Harry Vane' is in the press of Houghton, Mifflin & Co., for publication in the fall.

Cupples & Hurd issue directly 'Social Life and Literature Fifty Years Ago'; 'Iona, a Lay of Ancient Greece,' by Payne Erskine; 'The Autobiography of Solomon Maimon,' by Prof. J. Clarke Murray; 'Miss Frances Merley,' a novel by John Elliott Curran; and 'Wit, Wisdom, and Pathos,' from the prose of Heine.

'Trees and Tree-Planting,' by Gen. James S. Brisbin; 'A Guide to the Conduct of Meetings,' by George T. Fish; and 'A Strange Manuscript Found in a Copper Cylinder,' a novel "written many years before the appearance of Mr. Rider Haggard's," are among the current announcements of Harper & Bros.

Anson D. F. Randolph & Co. will publish early next month 'Stubble or Wheat?' an anti-pessimistic story, by S. Bayard Dod.

Macaulay's 'Lays of Ancient Rome' is the latest addition to the pretty "Knickerbocker Nuggets" series of the Messrs. Putnam.

Pessimistic observers of American politics may be recommended to read the preface to the fourth revised edition of Simon Sterne's 'Constitutional History and Political Development of the United States' (Putnams). This work was originally published in 1881, and Mr. Sterne sees progress all along the line, except in the legal-tender decision of the Supreme Court and the labor aberration fostered by Henry George's speculations. The several steps in advance which he enumerates are afterwards dwelt upon in the addenda, where, also, corrections are grouped together. The book is a particularly useful one for the Presidential year. The short section of afterthought on the woman-suffrage question will, we think, seem somewhat superficial to those who watch most closely the drift of public opinion, of which the latest sign is the close division over the proposed equality of the two sexes as delegates to the Methodist General Conference in this city.

'The Ethics of Marriage,' by H. S. Pomeroy, M.D. (Funk & Wagnalls), is a work in good faith on a delicate subject of the utmost importance. The treatment is in unobjectionable taste, and if it still leaves much to be said, and from a different point of view, it is certain to win respect for the author among the thoughtful.

We have, from time to time, noticed the monographs upon coöperation published by the American Economic Association. These have now been collected, with some additions, and are published in a handsome volume under the auspices of the Johns Hopkins University. A tolerably complete summary of the history of coöperative enterprises in the different sections of the country is thus presented, furnishing probably the best mass of statistics available to the student. It is to be observed that the term coöperation is very loosely used, and includes almost every form of joint-stock association—even those employing laborers who have no interest in the stock or share in the profits. If its connotation were narrowed, there would be a saving of space and the matter would be more instructive.

Among the papers of the American Historical Association is one published several years since, but of present interest in connection with the attempt to divert the Federal revenues to the support of State schools. It is entitled 'History and Management of Land Grants for Education in the Northwest Territory,' by George W. Knight (Putnams). If we regard the State as an entity apart from its subjects, nothing could be more shameful than this record. The State of Illinois, for example, has succeeded in disposing of about a million and a half acres of land, for which she has to show a fund of $4,000,000. By an accident some 8,000 acres of land were retained, which are now worth two and a half million dollars. If the lands had been let on long leases instead of being sold, they would now be of fabulous value. But there is much to be said in favor of sustaining schools by taxation, and it is by no means improbable that the apparent loss to the State was more than offset by the gain to individuals. As Mr. Wright suggests, the State is ill qualified for the functions of a landlord. The paper (vol. i, No. 3) is a very thorough piece of work, and is interesting as well as instructive.

The thirteenth volume of the *Century* (November, 1887–April, 1888) comes bound to our table, and, refreshing our memory of its contents from month to month, we turn over the six remarkable papers by Mr. George Kennan on Russian tyranny and political punishment; Mr. Stillman's estimate of Ruskin, Mr. Lowell's of Landor, and Mr. James's of Robert Louis Stevenson; the war papers, with the thrilling story of the Libby tunnel; the Lincoln biography, with its revelations of Seward's ambition to relegate the President to the condition of a British constitutional monarch, and to make himself premier; the English cathedral articles, and many more. Mr. Stockton's "The Dusantes," Mr. Eggleston's "The Graysons," and Mr. Cable's "Au Large" lead the fiction. Nothing is on the whole so striking among the illustrations as the composite photographic portraits presented by Prof. J. T. Stoddard. They—both male and female—must be allowed to be powerful arguments in favor of the higher education.

From the Century Co. we have also the second volume of the sumptuous 'Battles and Leaders of the Civil War,' which embraces some of the most picturesque and momentous events of the great struggle—the capture of New Orleans, Ball's Bluff and the Peninsula Campaign, Stonewall Jackson in the Shenandoah Valley, Pope's defeat and Lee's invasion of Maryland, Iuka and Corinth. Among the illustrations that possess a curious interest is one from a photograph of Gen. O. O. Howard taken just before the battle in which he lost an arm, and showing both members intact; and another of the rude mess of the Orleans princes and suite, likewise from a photograph. Belonging to the class of imaginative illustrations (happily not many in this monumental work) that might have been dispensed with, is the frontispiece "The Despatch Bearer," in which the galloping horse was drawn by the generation that knew not Muybridge.

The *Library Journal* for March-April tells of the present and perhaps permanent abandonment of its purpose to give a list of the private libraries of the country containing one thousand volumes and upwards—of which it estimates there are 100,000. Many returns were made freely, but in some cases even legal objections were interposed. "Several frankly stated that they preferred not to make any public statement of the size of their libraries lest the local assessors should promptly rate up their taxes." Others objected to being made the target of circulars from dealers. "From all over the country we hear of special collections in private hands often better and more full than those in the great libraries, particularly, for instance, in the department of Local History."

According to Mr. Foster's tenth annual report, the Providence Public Library now numbers 37,767 volumes, and ranks eighth in size among those of New England. Some curious tables of circulation for the decade, and for eight years, are given. In the latter period, among "works other than fiction used 125 times and over," Longfellow's poetry stands third on the list (346 times), Lowell's thirty-first (159 times), Scott's thirty-eighth (145 times). "Kenilworth" led all the works of fiction, juvenile included (625 times).

The sale and exchange of public documents effected through the medium of the Interior Department appears, from the annual report of Mr. John G. Ames, Superintendent of Documents, to be proceeding very satisfactorily; yet, for want of power to make requisition on other departments, the Secretary of the Interior is practically shut up to his own. No fewer than 11,953 duplicate copies of the *Congressional Globe* and *Record* have been received from libraries, among which some backwardness in availing themselves of this privilege is remarked by the Superintendent. He recommends as a check on overprinting for distribution by Congressmen an increase in the number of lawful depositories. Complaint is made of the frequent duplicating of titles of the same public document, and of the binding together in unwieldy volumes unconnected documents sufficient each to make a volume in itself.

A memorial portrait of the late Prof. John Norton Pomeroy, the former Dean of the Law Faculty of the University of the City of New York, has been presented to that institution. A pamphlet has been issued containing the address delivered on the occasion by Mr. Chauncey B. Ripley, with biographical and bibliographical data concerning Prof. Pomeroy furnished by his family.

Mr. Charles G. Leland will thankfully receive any contribution towards his forthcoming 'Dictionary of American Colloquial Expressions,' newspaper peculiarities, current jokes on popular topics, fragments of songs used proverbially, etc. Any such matter should be sent to the address 2 White Hart Street, Paternoster Square, London, E. C.

For any one in the habit of seeing several of the daily Paris papers, and of the lighter and more gossiping *revues*, the *Gazette Anecdotique* might not perhaps contain much that was new; but even in that case it would be found that there were few events desirable to remember or refer back to, in the political, literary, or artistic life of the moment, which were not preserved in the pages of this little periodical in a condensed and easily accessible form. Even the vagaries of *not' brav' général* and his followers are recorded under the proper dates, with quite as much detail as they deserve, side by side with the rise and fall of the successive ministries, and the production of the successive new plays which are the bubbles in this sparkling foam of Parisian journalism.

Brentanos have received the first fascicule of Albert Wolff's '*Figaro*—Salon, 1888,' of which four more are to come. The text thus far is cursory, and avowedly not based on a study of the canvases. The illustrations are of large size and excellent quality, in various "processes" which, a few years ago, would have been beyond the reach of such a publication, and in which Paris still takes the lead.

The second volume of the 'Société de Paris,' by the anonymous Count Paul Vasili, has been issued from the press of the *Nouvelle Revue* (Boston: Schoenhof). Its special title is 'Le Monde politique.' The first volume, 'Le Grand Monde,' appeared last spring.

Plon & Nourrit have just published 'Mabil-

lon et la société de l'abbaye de Saint-Germain-des-Prés à la fin du xviie siècle,' by Prince Emmanuel de Broglie, son of the present Duc de Broglie.

—The spring meeting of the American Oriental Society was held in the library of the American Academy in Boston on Wednesday, May 2, Dr. Andrew P. Peabody in the chair. Among the papers read was one by Prof. Richard Gottheil of Columbia College, on "A Syriac Geographical Chart of the Thirteenth Century," found in an old MS. of the 'Lamp of the Holy Things,' by Gregorious Bar Ebhrāyā, who lived in the second half of the thirteenth century. The chart comprises the whole world as far as it was known to this Eastern ecclesiastic, and is an interesting addition to the history of cartography. Bar Ebhrāyā, following the Arabic geographical writers, divides the whole earth into seven parallels or "climates," but he goes beyond the Arabic charts which we find, for instance, in Kazwini, and attempts to delineate roughly the forms of the different countries. We can see here the effect of contact with Greek learning. Mr. James R. Jewett of Harvard University spoke upon the School of Biblical Archæology which it is proposed to erect at Beirut in Syria, and to found and manage upon the same principles as the Classical School at Athens. Orientalists, archæologists, and theologians are there to become practically acquainted with Palestine and the neighboring countries, to study the habits and languages of the present inhabitants, and, when the opportunity offers, to make archæological and antiquarian researches. Prof. David G. Lyon of Harvard treated of "The Trustworthiness of Assyrian Statements, Figures, and Dates." During the year 1887 two editions were brought out of a tablet dated 499 B. C., containing a synchronous history of Babylon, Assyria, and Elam, down to the year 668. This tablet is likely to shake our faith in the accounts which the Assyrian kings have handed down to us. From his own inscriptions we had been led to believe that during the first years of his reign (about 720 B. C.) the great Sargon II. had defeated Humbanigash of Elam at Dūrīlu. The Babylonian chronicle, however, says distinctly that the Elamite carried off the victory, and not Sargon (Tiele, 'Babylonisch-Assyrische Geschichte,' p. 614). In the same manner Sennacherib, in his account of his bloody conflict with Babylon and her allies at Hallulu, not far from the present town of Bagdad (692-1 B. C.) ascribes the victory to his own arms. Our tablet, however, gives the victory to the Elamites. The accounts have been written by different peoples, and it is possible that misrepresentations have been made by both sides. The Society adjourned to meet in the fall either at New Haven or at Philadelphia.

—The Wisconsin Historical Society has just issued the tenth volume of its collections, closing with a fifty-page index of the whole series, which includes about five thousand pages. This last issue shows much elaborate research regarding early exploration and settlement. These are matters of local interest, but one paper is sure to be read everywhere, namely, a monograph of seventy-six pages by the Secretary emeritus, on 'Autograph Collections of the Signers of the Declaration of Independence and of the Constitution.' From this document we learn that only twenty-two sets of autographs of the Declaration signers have been made, and that it is scarcely possible for another to be made. The first of these sets was completed by Dr. Sprague of Albany, and that about 1835, after twenty years' labor. The thought of making it struck him, in 1815, when a nephew of Washington, who had inherited his uncle's papers, allowed Dr. Sprague to take away any originals he pleased in exchange for copies. He thus obtained at once twenty-nine separate signatures. The twenty-two sets represent the labors, individual and coöperative, the exchanges, and the lucky accidents, of half a century. Seven of them are now to be found in the State of New York, five in Pennsylvania, three in Massachusetts, two in Georgia, and one each in Connecticut, Rhode Island, Wisconsin, Maryland, and England. All the twenty-two sets save one are more than signatures. They include many autograph letters with signatures of the signers, and the value of the sets is measured by the number of these letters. Classified according to this standard, the set of Dr. Emmet of New York stands highest, having fifty-four letters—that is, letters from all the signers but Morton and Gwinnett. It shows the only Lynch letter that is known to exist. It even contains an autograph document signed by Morton, and the name of Gwinnett affixed to a document. One of the sets has only twenty-five letters, and only six can boast fifty or more. One of these six is in the State Historical Society at Madison, Wisconsin. The set there is the only one anywhere west of the Alleghanies, and the only one owned by any Historical Society, except that of Pennsylvania. Accordingly, it was naturally in the publications of the Wisconsin Society that the niche was found which the signatory monograph was best fitted to fill. Besides the fifty autograph-signed letters, there are in Madison documents signed by four of the signers whose letters are lacking, and an autograph document signed by a fifth. Of Lynch there is only an inlaid cut signature. He is the only one of the fifty-six from whom Madison cannot show something more.

—The monographer to whom Wisconsin really owes its set standing among the foremost six, treats his theme with an affectionate minuteness. He has not much to say of his own endeavors, still baffled, still renewed, for a quarter of a century. But he expatiates on Dr. Emmet, the only man who has accumulated three sets, at an outlay of $25,000, as well as time and pains that would have brought him more than that. He describes one set as having perished at the burning of Columbia. The following anecdote is one of the best illustrations that "our indiscretion sometimes serves us well, when our deep plots do pall": Mr. Tefft, the earliest American autograph collector, calling on a friend and not finding him, walked on his lawn. Picking up a paper that was blown into his path, he saw on it the only signatory autograph which his set then lacked, and sadly lacked—the name Button Gwinnett, the rarest name, save Lynch, of all the immortals. House-cleaning had just taken place there, and this paper was a waif from old documents swept out of a garret. Mr. Durrie's paper also describes thirty-one incomplete sets of Declaration autographs. Several of his pages speak of autographs of signers of the Constitution of the United States. Among the sixteen sets of these thirty-nine names which have been completed as complements to the Declaration series, Madison has one—that is, an original autograph signed letter from each and all of the thirty-nine.

—Mr. Alfred Ainger has at last, after long delay, sent forth in two volumes his collection of 'The Letters of Charles Lamb—Newly Arranged, with Additions' (A. C. Armstrong & Son), thus substantially and satisfactorily completing his admirable edition of Lamb's works. Now that we have these two volumes of correspondence, we do not hesitate to say that Mr. Ainger has given us not only by far the best edition of Lamb, but one of the very best editions yet issued of any of our later classics. He has great sympathy with Lamb, a keen understanding of his character, and a high relish of his humor; he has also excellent taste, untiring industry, a wide knowledge of the period, and ample charity for the shortcomings of his predecessors. The present collection contains all of Lamb's letters hitherto published (except a few trifling and empty notelets) and several series of letters hitherto unpublished, some of which are of great importance and interest. The arrangement is chronological—although at times the dating is tentative. From the year Lamb came of age to his death, the story of his simple career is told in his correspondence. As Mr. Ainger says, there are few incidents in his life "that are not related or referred to in these letters; when read consecutively, and with the help of such supplementary information as can be provided in notes, they form an almost complete biography." In providing these notes Mr. Ainger has been discreetly abundant—there are more than eighty pages of them, properly relegated to the ends of the volumes. There is also an excellent index of nearly forty columns. Second only to the biographical interest of these letters—and Lamb is one of the writers whom we love for themselves even more than for their works—is the fund of criticism herein contained. In Lamb the critical faculty developed very early, and its versatility was as remarkable as its keenness. As Mr. Ainger puts it, "Lamb is our best and wholesomest example of that rare capacity for valuing and enjoying one literary school without at the same time disparaging its opposites"—a capacity especially welcome just now.

—Incidentally, in Mr. Ainger's almost always instructive notes, we get a pleasant glimpse of Edward Fitzgerald, the translator of 'Omar Khayyám.' It was Fitzgerald who sent a poem to Hone which was published in the *Athenæum* with the suggestion that perhaps it was Lamb's, and which Lamb wished he had written. Fitzgerald married the daughter of Lamb's frequent correspondent, Bernard Barton, the Quaker poet, whose memoir he wrote. And it was Fitzgerald who supplied Mr. Ainger with an account of one of the neatest of Lamb's jokes. When Lamb was in Paris in 1822, he saw Talma act *Regulus*, and had the actor to supper in the evening. The humorist and the tragedian got on excellently, although Lamb did not conceal his lack of liking for French tragedy. "I was not very happy to-night," said Talma at last; "you must see me in *Sylla*." "*Incidit in Scyllam*," said Lamb, "*qui vult vitare Charybdim*." "Ah! you are a rogue—a great rogue," said Talma, shaking him cordially by the hand as they parted.

—Readers of the *Nation* will doubtless remember the interesting account by its Paris correspondent about a year ago (No. 1131) of the then newly published journal of the little Princess Hélène Massalska during her school years at the Abbaye-aux-Bois. Lucien Perey has just published the second volume of this 'Histoire d'une grande dame au XVIIIe siècle' (Paris: Calmann Lévy; Boston: Schoenhof). The earlier volume contains, besides the Journal, the story of the marriage of the young Princess with Prince Charles de Ligne, and of her life as the Princess Hélène de Ligne for the fourteen years during which this union lasted. It ends, three months after the death of the Prince, with her second marriage to her countryman, the Polish Count Vincent Potocki. The present volume contains her life as

the Countess Hélène Potocka from the beginning of 1793, just after her second marriage took place, until her death in 1815. The story of these years is told partly by means of the correspondence between the Countess Hélène and her husband during their temporary separations, from which a great number of letters are published, and partly, when letters fail, by the narrative of the editor—the materials for which were drawn, as the reader is informed in the preface, not only from public and private collections, but from family papers and traditions and personal communications. The entire honesty as an editor of Lucien Perey (Mlle. Herpin) has been vouched for; still, what she says about her sources of information, and especially concerning the manner in which she has made use of them, would be more satisfactory if it were somewhat less vague. She has, however, made an attractive work from her abundant materials, and no part of the story is more interesting than that contained in the present volume, which is animated from beginning to end by the enduring and ardent affection of the Countess Hélène for the husband who was not always as exclusively devoted to her as she was to him.

—We have received the first number of Brunn's 'Denkmäler Griechischer und Römischer Sculptur,' of which we made mention some weeks ago. At this early stage of the work it is not possible to pass judgment upon it, and we shall content ourselves, for the present at least, with calling the attention of our readers to its character and purposes as they are set forth in the introduction. The editor wishes it distinctly understood that this is not to be a history of the art, but a series of illustrations so complete that they will in themselves embody its history. The text will therefore, we presume, be limited to the absolutely necessary; the first number containing only the Introduction, which has already been extensively circulated as a prospectus. The work will consist of about eighty parts, each containing five plates, and costing five dollars. In other words, the completed work will include some four hundred illustrations of the most representative monuments of the various epochs and schools of Greek and Roman sculpture, and will cost about four hundred dollars. The price alone is an indication of the ambitious character of the undertaking. In these days of good reproductions at low prices, a work like this seems more than ever costly, and we have a right to expect of it the very best that can be done in the way of reproducing the texture, surface, and finish of the subjects, and conveying as far as possible the impression produced by the tone of the material in the original. It is in this respect that experiments in reproductive processes have been especially successful of late years, and nowhere more than in Germany. The 'Antike Denkmäler,' published by the German Archæological Institute, seems to us the highest achievement yet attained by a publication which has to meet both scientific and artistic requirements, and it is by such a standard that the character of the present work will have to be judged. The name of Professor Brunn is the surest guarantee that the selection of subjects will be the most comprehensive and illustrative possible. Photographs are being made expressly for it under the direction of Dr. Leopold Julius, directly from the originals where this is possible, and in other cases from casts. These photographs are reproduced by "phototype," apparently a gelatine process, which gives them a permanent, lustreless black, and are mounted upon boards similar in size and color to Braun's. We regret the amount and size of the lettering introduced under the plates, which has a disturbing and, to our mind, a cheapening effect. The five plates in the first number are of subjects of various epochs in Munich and Athens, and include beautiful illustrations of the Apollo of Tenea and the Barberini Faun. The work is published by Bruckmann of Munich, and Asher & Co. of London are the sole agents for England and America.

RECENT POETRY.

PROBABLY no single volume of poems published in this country, since that of Emerson in 1847, has given a more unexpected sense of wealth and added possessions than Mr. Lowell's 'Heartsease and Rue' (Boston: Houghton, Mifflin & Co.). Our poets are now so apt to write with a magazine-editor at the elbow; their new volumes are so largely filled with what has already been in print; and it seemed so improbable that Mr. Lowell's diplomatic years should have accumulated in his portfolio many unpublished treasures, that the public has been delighted beyond all anticipation by the final opening. The poems hitherto unseen appear fresher and more finely wrought than the more familiar, and the shortest are usually the best, having a peculiar mellowness of flavor and accuracy of form such as did not always mark Lowell's earlier work. He was, from the first, in Willis's phrase, "the best launched poet of his time"—beginning with no preliminary ordeal of disapproval; and the somewhat profuse and imitative sentimentality of his earliest volume met little but friendly criticism, except from Margaret Fuller, who said that it "sounded no depth." The 'Fable for Critics' shows how bitterly the young poet resented the remark; but he took the hint, and very little of the 'Year's Life' is now preserved in his collected poems. Later, he went through a period when his thoughts outgrew his power of expression, and there was a great deal of crudeness, clumsiness, and mixed metaphor in his poems, reaching its climax in such lines as:

"Where there are woods and un-man-stifled places."

Alternating with these were passages of such lyrical wealth as no other American poet has surpassed; and it is delightful to find in this volume the maturing of all promise and the vindication of all hope. His 'Democracy and Other Essays' does not show a greater advance on his previous prose criticism than this volume on all that has preceded it, except the "Commemoration Ode"; it places him unquestionably above all his American contemporaries, save Emerson alone; for, with all Emerson's defiant roughnesses, there is certainly a note sounded in such poems as "The Problem," "The Day's Ration," and "Daughters of Time," which places them, in regard both to thought and execution, at a point inaccessible by Lowell. It is curious to observe, on the other hand, that the humorous verses in this volume show no advance.

Again, as has been intimated, the longest poems are not the best. The "Ode to Agassiz," for instance, opens in the old cumbrous and involved manner; and when it comes to delineation, it shows us not the actual Agassiz, but only one side of the man—his friend's affection, like the proverbial sun-dial, counts only the sunny hours. The other Agassiz is not here, who was wont to deny to Darwin and Asa Gray the very name of scientific men because they favored the doctrine of evolution, though a true picture would give his bluff and vehement stubbornness as well as his kindliness when among admirers. On the other hand, Mr. Lowell cannot be charged with here withholding his own animosities; and he even feels bound to justify himself to Mr. Curtis for some phrases that were resented at the time as pessimistic, but which were all condoned and forgotten after his address on 'Democracy.' Occasionally, too, there is still a rough phrase that seems caught from the least attractive side of Browning, as in the verse:

"I have a fancy: how shall I bring it
Home to all mortals wherever they be?
Say it or sing it? Shoe it or wing it?
So it may outrun or outfly ME,
Merest cocoon-web whence it broke free?"
(P. 146.)

It is a pleasure to turn from this terse but too blunt expression to the exquisite ideality of the following:

"TO A LADY PLAYING ON THE CITHERN.

"So dreamy-soft the notes, so far away
They seem to fall, the horns of Oberon
Blow their faint Hunt's-up from the good-time gone;
Or, on a morning of long-withered May,
Larks tinkle unseen o'er Claudian arches gray,
That Romeward crawl from Dreamland; and anon
My fancy flings her cloak of Darkness on,
To vanish from the dungeon of To-day,
In happier times and scenes I seem to be,
And, as her fingers flutter o'er the strings,
The days return when I was young as she,
And my fledged thoughts began to feel their wings
With all Heaven's blue before them: Memory
Or Music is it such enchantment sings?" (P. 117.)

Dr. Holmes does not in 'Before the Curfew' (Houghton, Mifflin & Co.) offer us hoarded treasures, such as Lowell's, for the reporters have followed him up too closely; and the interest with which one turns the leaves of this volume is rather personal than poetical. He has his well-defined place in our literature, over which he himself has no further control; he is enrolled among that class whom Emerson designated as "favorites," holding an individual popularity which excludes all question of greater or less in point of genius. In this volume, as in those which have preceded it, he shows the curious combination of sometimes visibly failing to grasp large themes successfully, while elevating small ones by the lightness of his touch: "Columbia" hardly inspires him, but his after-dinner resources are inexhaustible.

It is interesting to observe that, after some delay, the American medical profession has at length produced its second real poet. The extraordinary versatility of Dr. S. Weir Mitchell has never shown itself in a form more striking than in his new volume, 'A Masque, and Other Poems' (Houghton, Mifflin & Co.). The result is more remarkable than in his novels, about which there is, to our thinking, something a little amateurish; whereas, the best of these poems—and the best are, for a wonder, the longest—would impress one as the work of a man whose whole soul was in poetic art, and who never had looked in any other intellectual direction. The "Masque" itself, with its scene laid in the fifteenth century, is as terse, as objective, as powerful, and proceeds with as stern a tread from the very first line to the very last, as if Browning had written it; and the other dramatic sketches, called "A Medal" and "The Huguenot," are scarcely less strong. Curiously enough, the weak point of the book comes when the author, thus vigorous in his own dramatic power, comes to transfusing the same quality from another writer. In his brief preface, Dr. Mitchell tells us that his poem on Launcelot "is an attempt to render, in blank verse, and as literally as possible, the most dramatic episode in the Arthur of Sir Thomas Malory"; but the rendering, though spirited, can by no means be called literal, phrases and whole lines being introduced, and in one case a passage of six lines being interpolated, beginning "And in the moonlight" (p. 44), and this always to the diluting and weakening of the sense. In the last line but one, in the phrase, "abroad his arms he cast," we should plainly read, "his armor," as in the original, since the word "arms" is ambiguous.

Mr. John James Piatt has made a selection from his poems under the title of 'Idyls and Lyrics of the Ohio Valley' (Houghton, Mifflin & Co.). Like all his volumes, it contains much that is pleasing and little that affords new promise, for the labor that he bestowed in retouching his one remarkable poem, "The Morning Street," only serves to emphasize the fact that he reached his high-water mark thirty years ago. Yet inasmuch as the function of a poet's life may commonly be said to be fulfilled when he achieves one strain that will be remembered, it makes but little difference whether this be done earlier or later in his career. In 'Beyond the Shadow, and Other Poems,' by Stuart Sterne (Houghton, Mifflin & Co.), Miss Bloede continues that thoughtful and contemplative strain which has won her many readers. She never writes carelessly or without meaning, and though she never quite attains beyond the shadow, she never belittles the dignity of the shade. One of her strongest passages is where she makes a woman chant the song of her sorrow, and then wake to the greater grief of finding it all a dream, and her life empty of even the tragedy which she had visioned:

> 'The morning sun was in the room,—I woke—
> I knew it was a dream,—I knew my life
> Was heavier than the burden of my dream,—
> —I had not won, I had not loved nor lost."
> (P. 93.)

The reader opens each new book by Louise Imogen Guiney—in this case 'The White Sail, and Other Poems' (Boston: Ticknor & Co.)—in hopes to find that she has learned that art for which Jomelli, the composer, sought the instruction of Martini, "the great art of not being embarrassed by one's own ideas." But the result is always disappointing: she does not gain this art; there is always redundant invention and exuberant thought, but not the master's touch. In such poems as "The Rise of the Tide" and "A Chouan," she shows a genuine dramatic power, and then we come upon lines so defiantly turgid as

> "Her father's houndish lords she moved among
> From feud and uproar dewily distraught."
> (P. 51.)

But inasmuch as she has on her side youth and abundant talent, she may have a career before her. It would be daring to assume as much as this for Mr. William Batchelder Greene, whose waywardness seems as defiant and hopeless in 'Cloudrifts at Twilight' (Putnams) as in his previous pages. There are certainly gleams of light through his cloudrifts, but they show a dreary landscape, after all. It requires great charity to have any hope for the poetic career of one who can print such lines as the following:

> "PARIS, THE TON.
>
> "Yea, Paris, thou art France!
> Fair senseless *ton*, my senses throb
> For thee—thou art so beautiful.
> Lord! what a gad is Paris Fair,
> Ripe bait for foreign hordes;
> You pay your chink and get your chunk,
> Well buttered on both sides." (P. 104.)

And so on indefinitely. Yet this is no worse than the equally wayward pages with which a veteran in literature like Mr. George Meredith insults us, in his 'Ballads and Poems' (Boston: Roberts Bros.), as in the following?

> "HERNANI.
>
> "Cistercians might crack their sides
> With laughter, and exemption get,
> At sight of heroes clasping brides,
> And hearing—O, the horn! the horn!
> The horn of their obstructive debt!
>
> "But quit the stage, that note applies
> For sermons cosmopolitan,
> Hernani. Have we filched our prize,
> Forgetting . . . ? O, the horn! the horn!
> The horn of the Old Gentleman!" (P. 69.)

Yet on the very next page he strikes the powerful notes which mark the beginning of 'The Nuptials of Attila," a poem which for pure strength has not been surpassed in this generation, although even this is far too prolonged and discursive:

> "Flat as to an eagle's eye
> Earth hung under Attila.
> Sign for carnage gave he none
> In the place of his disdain,
> Sun and rain and rain and sun
> Cherished men to wax again,
> Crawl, and in their manner die.
> On his people stood a frost.
> Like the charger cut in stone
> Rearing stiff, the warrior host
> Which had life from him alone
> Craved the trumpet's eager note.
>
> O for the time when God did cry,
> Eye and have, my Attila!" (P. 70.)

The whole poem has the concentrated and waiting strength of the famous equestrian statue of Colleone; the woman described is even stronger than the men, and is brushed aside at last with a disdainful touch that is stronger than either:

> "Of the Queen no more was told
> Than of leaf on Danube rolled.
> Make the bed for Attila!" (P. 100.)

If thew and sinew were the test, George Meredith might well count as the first of English-writing bards; but even in athletic contests the judges take into consideration the element of grace.

The 'Garden Secrets' of Philip Bourke Marston (Roberts Bros.) has been already praised in these columns, and the series is now printed by itself. It is prefaced by a sketch of the young blind poet by the American lady to whose kind encouragement and friendly offices he was so much indebted, Mrs. Louise Chandler Moulton. The biographer has done her work with delicacy and sympathy. Another *carrière manquée* commemorated in a volume of poetry is that of the late David Atwood Wasson ('Poems,' Boston: Lee & Shepard), in whom the world lost a man of rare gifts, so hampered by illness and by various struggles as to give but a glimpse of what he might have been. His poems, as here published, have that kind of charm which Keats attributed to Shakspere's sonnets when he wrote, "They are full of fine things said unintentionally"; and some of his finished poems, as "All's Well," have already found a place among our American classics. There is a flavor of the seventeenth century about this poem, rising to a climax in the perfect closing lines,

> "And drowns the dream
> In larger stream,
> As morning drinks the morning star." (P. 127.)

Mr. Wasson also produced one of the finest among American sonnets in that which begins:

> "As unto blowing roses summer dews
> Or morning's anthem to the treetop choirs" (p. 78)

—an opening which certainly sustains the phrase just quoted from Keats. But the usual misfortune follows when a posthumous volume of verse is made up; between these fine scintillations occur many pages of mere rhythmic prose, and the over-strong praises of the editor lead the reader on to some disappointment. A more belated and more questionable tribute is in the sumptuous quarto which recalls the fading name and the sad career of Henry William Herbert, once well known as a sporting writer under the name of "Frank Forester." His 'Poems' are now collected (John Wiley & Sons), are printed on separate quarto sheets, and contained in a tasteful portfolio. They are illustrated, too, with engraved portraits of various Earls of Pembroke and Carnarvon, and of "Sidney's sister, Pembroke's mother," with all of whom Mr. Herbert was connected by blood; also, of their various country-seats and of "the Meet of the Meadow-Brook Hunt at Old Westbury, Long Island." Besides all these, there are representations of the author, his wife, his son, and his house; the whole effect being to recall and to deepen the tragedy of a wasted life. Mr. Herbert was, however, a good classical scholar, and the translations in this volume are the best part of the poetry; the rest having rather the flavor of the Willis period.

"A Little Brother of the Rich" has hit the public taste and has been widely circulated, but the "and Other Poems" of E. S. Martin (Mitchell & Miller) are not really enlivening; containing perhaps nothing so good as the condensed wit of the preface—"Inscribed to the editor of the *Sun*, with the somewhat disquieting consciousness that he knows poetry when he sees it." Mr. James Whitcomb Riley also publishes a volume of 'Afterwhiles' (Indianapolis: Bowen-Merrill Co.), which contains little to solidify his dawning reputation. Perhaps what he really needs is to read the "dialect poems" aloud, and then they would be effective. Yet one cannot well do this for sixty million people, and surely his verses "The Old Man and Jim"—not contained in this volume—needed no such personal administration to be effective and touching. Two other volumes in dialect are 'Poems by the late Irwin Russell' (Century Co.) and 'Befo' de War; Echoes in Negro Dialect,' by A. C. Gordon and Thomas Nelson Page (Scribners). Both of these employ for artistic purposes a mode of speech which "befo' de war" was found far less attractive; and both of them portray the negro of that period as such an infinitely blissful being that the youthful reader of history must wonder why it was ever necessary to convulse the nation by a Fugitive Slave Law in order to keep these happy creatures from running away. But they now afford good literary resources, at any rate, and these materials are here used with a good taste that is conspicuously absent from some of the prose work lately done by Southern women.

Sir Edwin Arnold seems especially unpopular just now—he and his verse—in London. Most of this feeling is doubtless political, as he is thought rather exuberant in his loyalty to the "Empire" for one who used to be classed with Liberals. Part of it may be also due to too profuse production, especially in the Oriental way, of which the public easily grows tired, as Southey and Moore found before him. Yet it is evidently his strongest point, and in his 'Lotus and Jewel' (Roberts Bros.) neither the original poems nor the French translations seem at all equal to what he brings from farthest Ind. The Hindu ballad, especially, he always handles with great vigor, as in "The Rajpût Nurse" (p. 181); but the necklace of pearls which he weaves by way of acrostic for his American wife seems a little labored, as it well might be. Yet the mere enumeration of gems for a hundred pages dazzles the eyes, and it certainly might deserve the name of that "lapidary style" which Charles Lamb claimed for some briefer and livelier effusions of his own. Another English volume, drawn from Italian, not Oriental, sources, is 'The Disciples,' by Harriet Eleanor Hamilton King (London: Kegan Paul; New York: Randolph); a book written, it is said, at the suggestion of Mazzini, and embalming in really simple and noble blank verse the experiences of Garibaldi and some of his fellow-laborers for the redemption of Italy. A peculiarly fine and impressive passage, "The Sermon in the Hospital," by the priest Ugo Bassi, has been reprinted in this country, and reached a wide circulation. In great contrast to this grave, strong book is 'Free Field; Lyrics Chiefly Descriptive,' by R. St. John Tyrwhitt of Christ Church, Oxford (Macmillan). There are here some poems about Palestine, conveying a little of the flavor of Lord Houghton's 'Palm Leaves,' but more feebly; and the rest of the book is trivial. Nor will the fame of Mr. Swinburne be enhanced by 'Locrine,' a

dramatic poem showing some of his resources of rhythm and alliteration, but with no strong grasp of character, and attaining about the grade of Sir Henry Taylor's less successful poems of this kind—'Edwin the Fair,' for instance (Worthington).

England may be regarded as at last avenged for the many tales told of the inability of her sons to take a joke made at their own expense. Mr. Thomas Brower Peacock, author of 'Poems of the Plains and Songs of the Solitudes' (Putnams), whose previous volume was lashed with sharp satire through a column of the *Saturday Review*, here reprints the whole review as an encomium, and his prefatory biographer rejoices in it as a crowning triumph. When the *Saturday Review* says, in its occasionally lively way, that Longfellow and Bryant are too English, and that the American bard should be "a soaring human being," and not be "inspired by the bed-ridden Pierian muses"; when it proceeds to give a few of the more astonishing verses of what it calls "this truly remarkable contemporary epic"; when it compares the author alternately to Homer, N. P. Willis, and Alfred Austin; when it ends by fervently saying: "We have never read any American poetry so exuberantly American," the author accepts it all and reprints the notice with gratitude on an advertising sheet. We can do no less, under such circumstances, than give an example of the chief narrative poem, commemorating a hero now dearer to the English heart, apparently, than even to our own:

> "Where Wild Bill fought the dead do swell
> To thrice the number elsewhere slain.
> He flies, he flashes o'er the plain—
> He kills before, behind the same—
> Shoots on all sides, true is his aim;
> He fires with such rapidity
> One stream of fire doth ever free
> Flame from the mouth of his firearms,
> For each hand a revolver warms.
> His thundering yells incessant rise,
> Which tell his foes he them defies;
> His long hair snaps and cracks behind,
> And lashes the complaining wind;
> He bristles like a porcupine
> With weapons growling in a line—
> An arsenal that spins and flies
> Before the watcher's wondering eyes."
> (P. 260.)

This is from the "Rhyme of the Border War," and there are a hundred pages of it. The late Matthew Arnold is mentioned in the appendix as one who thought well of the work, and found in it, apparently, those qualities of distinction and interest which he declined to recognize in Emerson and others.

'Lyra Christiana: a Treasury of Sacred Poetry, selected and arranged by H. L. L., author of Hymns from the Land of Luther' (T. Nelson & Sons), is a fairly good selection of devout poems, one for every day in the year. It shows, however, a curious slovenliness in editing, having no alphabetical index of authors, titles, or first lines; giving "Rosetti" for "Rossetti," and making Lord Houghton appear sometimes under his title, and sometimes as "R. Monckton Myles" [Milnes]; while poems of unknown authorship are sometimes credited to "Anon." and again sometimes to "Unbekanntes." In great contrast to this volume is the thorough and admirable execution of Mr. A. H. Bullen's 'More Lyrics from Elizabethan Song-Books' (London: Nimmo), in which that wondrous period of literary history is ransacked once again through the manuscript "Books of Airs" and "Sets of Madrigals" of which the great English libraries are still so full. How cheap seems all the modern London brood of triolets and French measures, compared with the freshness, vigor, and variety of this series of mere gleanings after a harvest which seems destined never to be quite exhausted. To those who wish for one new volume of poetry—one and no more—as a summer companion, we can safely commend this. It may well be called a new volume in every sense, for its freshness, grace, and delicacy make these poems citizens of all countries, like the songs in Shakspere. If, for instance, we had professed to be quoting from Lowell's volume a series of cadences so charming as the following, who could have gainsaid us? Yet it is taken from '*Musica Transalpina*, or the Second Book of Madrigals' (1597):

> "So saith my fair and beautiful Lycoris
> When now and then she talketh
> With me of love;
> 'Love is a sprite that walketh,
> That soars and flies,
> And none alive can hold him
> Nor touch him nor behold him.'
> Yet when her eye she turneth
> I spy where he sojourneth:
> In her eyes there he flies,
> But none can catch him
> Till from her lips he fetch him." (P. 98.)

To evoke out of oblivion the name of a poet so fresh and graceful as George Campion may well repay the utmost labor of a loving editor. Nor does our editor give us airy fancies and lyrics of love alone, but such solemn harmonies as this from the MSS. of Christ Church, Oxford:

> "Victorious Time, whose winged feet do fly
> More swift than eagles in the azure sky,
> Haste to thy prey; why art thou tardy now
> When all things to thy powerful fate do bow?
> O give an end to cares or killing fears,
> Shake thy dull sand, unravel those few years
> Are yet untold, since nought but discontents
> Clouds all our earthly joy with sad laments,
> That when thy nimble hours shall cease to be,
> We may be crown'd with blest eternity."
> (P. 125.)

THE BROTHER OF PRINCE ALBERT.

Aus meinem Leben und aus meiner Zeit. Von Ernst II. Herzog von Sachsen-Coburg-Gotha. Erster Band. Berlin: Wilhelm Hertz. 1887. 8vo, pp. x, 616.

THE author of these recollections calls attention to the remarkable paucity of memoirs in German as compared with their abundance in English, and especially in French. He might have added that this paucity becomes still more remarkable when we consider that in almost every other department of literature the Germans easily surpass the two rival nations. Novels constitute, perhaps, the only other notable exception. If German memoirs are relatively rare, the memoirs of monarchs are rarer still, and the present work thus enjoys a double claim to the attention of readers. This claim is reinforced by intrinsic merits, not the least of which is its agreeable style, as far removed as possible from the heavy, involved, and wearisome construction of sentences that makes the writings of most professional literary Germans forbidding and formidable. The Duke writes, not like a professional writer, but like an educated man of the world.

Although his dominions are small, the Duke of Coburg-Gotha has at various times enjoyed much prominence, partly owing to his ardent convictions and energetic character, partly, also, to his family connections with so many of the thrones of Europe. Prince Albert was his brother; among his first cousins may be mentioned Queen Victoria, King Ferdinand of Portugal, and the Duchess of Nemours, and his uncle, Leopold, was King of the Belgians and son-in-law of George IV. and of Louis Philippe. He says that his original intention was to give his recollections a purely personal character, but that in consequence of his uninterrupted interest in German politics his book has become a continuous narrative of the events of his time. The volume now published, however, owes more of its attractiveness to its revelations of the personal character and career of its author than to its historical portions. The latter, extending only to 1850, treat with almost unnecessary fulness of detail of many events which possess but a moderate interest for the world of to-day, spoiled, so to speak, by the great occurrences of the past quarter of a century, and absorbed in a far different class of problems. But many readers who care little or nothing about the humiliations which the irresolute character of Frederick William IV. brought upon Prussia, or who take but a faint interest in the Spanish marriages which helped to bring about the fall of Louis Philippe, or who quite despair of any attempt to understand the mysterious Schleswig-Holstein question, will take pleasure in studying the amiable qualities of Duke Ernst, as displayed in the course of his narrative.

His touching intimate relations with his brother, Prince Albert, lasting without interruption until the death of the latter, are known to English readers from the publications of Queen Victoria. The difference in their ages was but a little more than a year, and they were educated together. Their home life, although they missed a mother's care, was more affectionate than the conventional conception of a princely household would lead one to expect. The Duke lays great stress on the paternal influence under which they grew up. He says that their father was one of those men who, without any pedagogic maxims, but by the sheer force of character, are fitted to exercise influence on young people.

"I never," continues the author, "heard a harsh word from his mouth, or knew him to do an unbecoming act; we looked upon him as a model of excellence, and, although he never addressed a severe word to us, our respect for him, coupled though it was with affection and attachment, bordered on fear. He was never didactic, seldom praised or blamed, but his personal influence was so great that we took greater pains than if we had been praised or blamed. He was very skilful in arousing ambition and self-respect. His greatest pleasure was in having us about him as much as possible. Unconsciously, and with ease, he trained us to love nature and to comprehend the artistic, but his claims upon our attention, sympathy, and rapidity of apprehension were often too great. He never tolerated carelessness in dress or deportment, and in case of transgression punished only with a look, which, however, was so severe as to produce more effect than a long sermon. He allowed no complaints of personal discomfort, or even pain; we were hardened in every possible way."

In other respects the education of the two brothers varied from what was at that time regarded as the only proper way of training princes. They attended the University of Bonn, although it was not the custom of the sons of reigning houses to study at universities. In accordance with the usual practice, they were prepared for the university under private tutors, their curriculum departing in so far from that of the regular secondary schools as to exclude Greek, and to include natural history, physics, and chemistry—branches which, fifty years ago, were not so extensively cultivated as they are now. Although they did not learn Greek, they mastered Latin so thoroughly as to be able to converse in it and to take part in Latin disputations. French and English they learned, not in childhood, as was and is customary among their peers, but in later years. Their bringing up was liberal also in a religious point of view. The Duke says that both he and his brother took their confirmation very seriously, but adds that when Sir Theodore Martin speaks of Prince Albert's "natural piety," it must have been done to conciliate English prejudices, as the expression could not be truthfully applied to either of the brothers. The liberal opinions and practices of the Coburg princes, indeed, caused them to be, in a measure, "boycotted" among the German rulers, especially after their Uncle Leopold had accepted the crown of Belgium at the hands of a revolution,

King Leopold always took a fatherly interest in his two nephews, and much of the book is occupied with his letters and those of Prince Albert. In 1836 the two young men paid a visit to Brussels, this being the first of several journeys which they undertook together. There they associated with all manner and condition of men, not even excepting the dreaded Carbonari, thereby giving great offence to many of the ruling families in the fatherland. Duke Ernst has a sense of humor and a good scent for any oddity of character, and enlivens his pages with anecdotes of the many royal and other distinguished personages with whom he was brought in contact. Some of these stories he only repeats from hearsay, having heard them from his uncle. One relates to a scene between the latter and King Frederick William III. of Prussia, just before the battle of Leipzig. Prince Leopold, who was then serving in the Russian Army, had been sent to the King to get him to give certain instructions. He waited some time, and as the King did not appear or send out any message, he sent in an urgent request for an answer. Thereupon the King came out in very bad humor, declared that many hours ago he had requested the Emperor Alexander to inform him whether he should appear on the battle-field in the Russian or the Prussian uniform, but had received no reply, and was surprised that Prince Leopold had brought none. When the latter ventured to interpose a modest remonstrance, the King burst out in a rage, "I must know, first of all, what uniform I am to wear, for I shall most assuredly not march without trousers."

Another royal anecdote is in regard to King Louis of Bavaria. In 1840 the Duke, in his capacity as an officer in the Saxon Army, was on a visit to the camp at Nuremberg, and spent a fortnight in intercourse with the royal family. One day, after dinner, the King asked him, "How in the world are you going to kill this evening?" The young man admitted, with some embarrassment, that for want of something better to do he was going to visit the monkey theatre. The King seized the idea with childish glee, and said, "I'll go with you," and, in spite of all protests, insisted on going. After the performance, the burgomaster appeared in the barn in the full panoply of office, and made a patriotic speech of welcome to his beloved King, which was received with great applause. Then the King jumped on a bench and called out in a loud voice, "Is that meant for me or for the monkeys?" Of other royalties there is frequent mention. At a grand dinner which the author attended in England, King William IV. slept nearly the whole evening. Louis Philippe was very sympathetic to the young Prince. He was a perfect master of the German language, even speaking the various dialects. He was a man of strong personal feelings, and carried his feelings into politics. He had a great antipathy to Thiers. The latter was very near-sighted, and, on one occasion, while inspecting paintings at Versailles, knocked his nose against an easel, upon which the King called out to him, amid the laughter of the whole company, "That's what happens to people who poke their noses into everything."

Naturally the revolutions of 1848-49 occupy considerable space in this narrative. The Duke himself and his dominions were not directly much affected by the events of those years. He had voluntarily given his subjects a constitutional government some time before the storm appeared on the horizon, and had a reputation for entertaining liberal and patriotic sentiments. His services as commander of the Thuringian contingent in Schleswig-Holstein had gained him popularity, and overtures were even made to him from revolutionary quarters to put himself at the head of a national movement. His account of the way in which, by a timely display of boldness, he quelled a revolt in the neighboring duchy of Altenburg, shows that if the rulers had possessed a little courage, the Revolution would have made even less headway than it did. On the other hand, if the revolutionists had known how much dread they inspired in the breasts of the rulers, they would have followed up their successes more vigorously.

In the dreary years immediately following the Revolution, the Duke was a warm partisan of Prussia as against Austria, and of the theory that Germany had no hope of unity and greatness except under the leadership of Prussia. This view, although now a commonplace, was then a controversial question, and remained so until 1864, when Bismarck cut the Gordian knot of the Schleswig-Holstein problem. Although only thirty-two years old, the Duke in 1850 brought about the congress of sovereigns and presided over it. Its deliberations came to nought, through the lack of determination on the part of the Prussian ruler, but subsequent events have gone far to vindicate the patriotism and clear-sightedness of the Duke.

Many other interesting topics are treated fully in this volume, such as the Spanish marriages, the Greek question, in fact, all the political complications that agitated Europe from 1830 to 1850. The impression the reader gains of the author is that of an enlightened prince who takes a serious view of his responsibilities, and is animated by a warm affection for his larger fatherland. One is tempted to apply to him the lines which Goethe wrote of the Grand Duke of Saxe-Weimar:

"Klein ist unter den Fürsten Germaniens frellich der meine,
Kurz und schmal ist sein Land, mässig nur was er vermag;
Aber so wende nach innen, so wende nach aussen die Kräfte
Jeder, da wär ein Fest Deutscher mit Deutschen zu sein."

EBERT'S HISTORY OF MEDIÆVAL LITERATURE.

Allgemeine Geschichte der Literatur des Mittelalters im Abendlande. Von Adolf Ebert. Leipzig. 1874–1887. 3 vols., 8vo, pp. xii, 624; viii, 404; viii, 529.

THE history of the Classic Latin during the Middle Ages is one of the most interesting subjects of study, and one almost entirely untouched; histories of Latin literature usually ending with the fall of the Western Empire. Yet what more inspiriting subject of literary study could be found than the mode and extent of the preservation of classic literature during this period, and the influence of individual writers like Virgil, Ovid, and Plautus? Thanks to Comparetti's 'Virgilio nel medio evo,' Bartsch's 'Albrecht von Halberstadt und Ovid im Mittelalter,' and Reinhardstoettner's 'Die klassischen Schriftsteller des Altertums in ihrem Einflusse auf die späteren Litteraturen, I. Bd. Plautus,' we know something about the authors named, but how much remains yet to be done!

The Classic Latin was mainly preserved through tradition (so far as its popular influence was concerned), and for purposes foreign to itself—to train monks to write verse, to supply arguments to combat, etc. After the fall of the Western Empire, however, the literature that flourished until the rise of the national literatures was Latin in form, Christian in spirit, and almost exclusively ecclesiastical in contents. It is on this Christian-Latin literature, itself profoundly influenced by the Classic Latin, that the national literatures exclusively rest; for the elements, German, Oriental, etc., not peculiar to this literature, were obliged to pass through it in order to reach the national literatures. The long duration of this literature, its great volume and varied interest, entitled it to consideration by all students of the modern literatures, but it has been almost entirely neglected by all except those concerned with ecclesiastical history and literature. It is Ebert's glory to have made this field accessible for the first time to all classes of scholars, and to have revealed in a luminous and masterly way its supreme importance and interest as an organic part of European literature.

Those who have had to deal with the Christian-Latin literature of the period of which we are speaking, know how difficult it has been to find a guide through this field. First in order of time are the ecclesiastical biographical dictionaries like Jerome's, which, with additions by various writers in the editions of Miræus and Fabricius, was long a standard work. Then came the similar productions of Cave, Oudin, Du Pin, and Ceillier, in which the historical element gradually increased in importance. What could not be found in these had to be sought in the literary annals of the great monastic orders: Pez and Ziegelbauer for the Benedictines, Quétif and Échard for the Dominicans, Wadding for the Franciscans, Backer for the Jesuits, etc.—works of which it is impossible to speak too highly, but which, besides being scarce, lacked entirely the comparative method.

The magnitude of the task naturally frightened any one from undertaking a history of the whole field; the few attempts in this direction, like Berington's ('The Literary History of the Middle Ages'), being utterly worthless. Indeed, when Ebert began his work, he had but three predecessors worth mentioning, one of them incomplete, and the other two devoted to the Christian-Latin literature of a particular country. We refer to Bähr's 'Die christlichen Dichter und Geschichtschreiber Roms' and 'Die christlich-römische Theologie'; the 'Histoire littéraire de la France,' by the Benedictines (and later by a commission of the Institut de France); and, finally, J. J. Ampère's 'Histoire littéraire de la France avant Charlemagne, sous Charlemagne, et durant les Xe et XIe siècles.' Bähr's work is on the old bibliographical plan, and is now quite antiquated; the Benedictines' 'Histoire littéraire' is a work of very uneven execution; and Ampère's book, while pleasant reading, is somewhat superficial. After all, remarkable as has been the literary productivity of France at all times in her history, and while all branches of Christian-Latin literature were cultivated on her soil, a literary history of France during this period cannot take the place of one of all Europe.

If we have dwelt thus at length on Ebert's predecessors, it has been in order to bring out more clearly the difficulties he had to encounter, and to be able to estimate at its true value his successful performance of a herculean task. Before criticising the results of his labor, it will be well to form a distinct idea of the author's undertaking, for, strangely enough, some critics have entirely failed to see what was the author's goal, although the main title of the work sufficiently declares it. In the preface to the first volume Ebert says distinctly, after defining the Christian-Latin literature of the Middle Ages: "The Christian-Latin literature is here treated, therefore, entirely in regard to the literature of the Middle Ages, and as a part of it. . . . Not as an independent product, nor as an offshoot of the classical literature, but as a forerunner and companion of the national literatures of Europe, is the subject

here treated." And in this consists the originality of the work.

No one was better qualified for his difficult task than was Prof. Ebert, whose profound knowledge of every period of European literature has been attested by a mass of valuable articles and books, and enables him constantly to point out influences which would have escaped another. The general mode of treatment is a compromise between the older biographical method and the modern pragmatic literary history. The authors are treated chronologically one after the other, with an account of their lives and works, and a synthesis of the period to which they belong is given in an introductory essay placed before the divisions of the work. There are inconveniences in this method, and it is to be regretted that the author did not fuse his materials into one narrative. What, however, distinguishes Ebert's history from its predecessors, besides its extraordinary thoroughness and correctness, is an absence of bibliographical baggage, although all necessary references are given, and the completeness with which the works under examination are characterized and analyzed. Too much praise cannot be bestowed upon this feature. Only those who have worked their way with aching brain through the thicket of mediæval theological literature (much of which is entirely uninteresting in itself, but of vital importance for its later influence) can appreciate the endless pains and toil this part of the work must have cost the author. To mention but one example, Augustine's 'Civitas Dei' is analyzed in fourteen pages, in which every point of importance in the twenty-two books is clearly brought out. In other words, Ebert's analyses are sometimes genuine compends of the original, and hence an immense saving to the student.

The reader must not expect to find in Ebert a perfect substitute for the earlier works of Cave, Oudin, Fabricius, etc. It was no part of his plan to give a complete history of Christian-Latin literature in all its branches. His work embraces the practical-moral and ascetic as well as the historical literature, the dogmatic-speculative and polemical only exceptionally. Ebert's original plan was to write a general history of the mediæval literature of Europe. What he has accomplished is the history of Christian-Latin literature from its beginning to Charles the Great (vol. i); the Latin literature from Charles the Great to the death of Charles the Bald, 877 (vol. ii); and the Latin literature from the death of Charles the Bald to the commencement of the eleventh century, together with the beginnings of the national literatures, Anglo-Saxon, German, and French (vol. iii). In other words, he has given the history of that branch of Latin literature, without the classic pale, on which rest the national literatures of Europe, and he has brought his work down to the beginnings of those literatures, except in belated Italy and Spain.

The period which follows is of supreme interest, and no one can be a better guide than Ebert would have been; but it is also true that the means for the study of this period are more plentiful and easier of access, while Ebert has led us through what was a trackless waste. The author has not laid down his pen because he deemed his task accomplished, but because his failing health demanded it. Let us be thankful he was spared to do so much, and not grudge his weary hand its well-earned rest. May his declining years be cheered by a hearty recognition of his monumental work, an honor to his country and a glory to himself; and by the gratitude of the scholars of all lands who shall say, in the affectionate words of Dante—

"Tu duca, tu signore, e tu maestro."

The Orbis Pictus of John Amos Comenius. Syracuse, N. Y.: C. W. Bardeen. 1887.

We welcome this resurrection of the 'Orbis Sensualium Pictus,' which has lain too long in suspended animation. This masterpiece of Comenius, the prince of European educators in the seventeenth century, was the greatest boon ever conferred on the little ones in primary schools. Its author had grasped the idea of object lessons as fully as any modern, and developed it by a picture on every page of his book. Comenius, a Moravian, born in 1592, had no certain dwelling-place, but, by war or persecution, was tossed about all Germany, Poland, Hungary, England, Sweden, and Holland. He was urged by Winthrop to become President of Harvard College. Each change showing him a new significance in words when he came to see the things they denoted, he became impressed with the value of pictorial illustrations, and most of all in our childish plastic era. Hence his book was a natural growth.

It was not, indeed, the earliest picture book. The Egyptian 'Book of the Dead' was equally a picture book. Nor was it even "the first *children's* picture book," according to a phrase which the publisher, quoting from the 'Encyclopædia Britannica,' puts on its title-page. Its first issue in 1657 was more than two centuries after the appearance of the 'Biblia Pauperum.' 'The Bible of the Poor' was a kind of catechism in which children learned to read, and that about things and scenes shown on the same page with the letterpress. The 'Biblia' has 200 pictures, the 'Orbis' only 151, and those in size and artistic merit much inferior to what we see in the 'Biblia.' Where, then, is the merit of Comenius, which gave him a swifter and wider popularity than Webster's Spelling-book achieved for him—and that in many lands and languages? His forte lay largely in two things. His scope was not Biblical, but it ranged through all the common things that lie before every child. The house, shop, trades, sports, birds, beasts, furniture, tools, all things now of most interest in a Kindergarten, are depicted. A blackboard is seen on the school-room wall. In the next place, each change of many-colored life thus brought before the eye, which catches in an instant what the ear cannot learn in an hour, is analyzed. A dozen or more of the salient features on every page are marked each with a number, which leads to its name, as in United States ordnance manuals, and that is noted in the margin in two languages—Latin as well as the vernacular. Thus attention is fixed, interest roused and concentrated on definite points, the scholar becomes an active seeker and not a passive recipient. The result is a minimum of teaching, but a maximum of learning, and children become bilingual unawares. This method of teaching Latin rose again among us in the Hamiltonian or interlinear method.

Mr. Bardeen has applied photography to reproducing the woodcuts of 1657 just as they greeted Comenius himself. They are archaic and refreshingly quaint. It is interesting to compare and contrast them with the plates of the first American edition, published in New York in 1810 from the twelfth London edition. These were modified as respects dress, utensils, etc., to suit the time. The same first edition contains three more chapters than the present. —one being on Botany, and another on the Deluge.

In the Cyclopædia of McClintock and Strong six books by Comenius are described, but his greatest work is not mentioned. His death is there printed as 1631. That date may be a misprint for 1671—which is also an error —and should be 1670. Mr. Bardeen's dates, too, are divided against themselves. His cuts are said to be "copies from the first edition of 1658" (p. iv.), but then the work was "published in 1657," as we are told three times over, pp. vi., vii., ix. The latter date is correct.

Three Kingdoms: a Handbook of the Agassiz Association. By Harlan H. Ballard. New York: Writers' Publishing Co. 1888. 12mo, xii, 167 pp., illustrated.

This little book, which has reached its seventh thousand, was prepared to meet the necessities of that excellent organization so widely known under the name of Agassiz. It has an introduction by Prof. Alpheus Hyatt, in which he points out the benefits received and likely to inure to the community from the efforts of the Agassiz Association, and pleads for a permanent endowment to secure its future prosperity. The contents comprise an historical sketch of the Association, rules for organizing new chapters, plans for work and preservation of material, directions for the profitable study of the different branches of natural history and anthropology, instructions in regard to exchanges and as to making reports of work accomplished, and references to books, in all departments of science, which the student may find useful.

The repeated editions of this handbook called for show that it meets many of the needs of the young student of nature, and, doubtless, on the whole much better than any other existing publication. We wish the Association and its handbook continued development, progress, and improvement. There are a few typographical errors which should be corrected, and one portion, the bibliography, can be, and we hope will be, considerably improved in later editions. The assistance of a trained librarian would be most useful here, and there should be a certain amount of judicious and impartial comment on each item of the list, so as to give to those looking for handbooks in special sciences some idea of what each book contains and for what purposes it is suited. There are references to some books in the list which we cannot regard as suited to the needs of the members of such an organization. Others are objectionable as deficient in quality, or sensational rather than scientific in their contents. We do not doubt that the editor has used every endeavor to obtain titles of useful works, and the result shows, among other things, how very deficient in certain directions is our elementary scientific literature. Astronomy, botany, ornithology are well provided for. The lower invertebrates are much less fortunate.

Nothing partaking of the nature of an advertisement, except it be frankly introduced as such, should be permitted in such a handbook; and in future editions the so-called "Chapter xxi" should be headed "advertising," or in some other way more clearly display to the least suspicious and youngest reader its purely commercial character. We venture on these suggestions in the belief that they will be more helpful to the editor and to the Association than the use of the more considerable space we might have justly filled with praises of the many excellent and useful features of their little book.

Verner's Law in Italy. By R. Seymour Conway. London: Trübner & Co. 1887.

This book deserves mention here for several

reasons. In the first place, we may save from a possible disappointment some book-buyers who expect to find in the work a treatise on Roman or Italian law. In the second place, as the work of an English scholar who rises above the "parlor-philology" of Müller and Sayce, and shows himself familiar with the literature, results, and methods of the most recent investigations in comparative philology, it is a *rara avis in terris*. Thirdly, the book is a most important contribution to the history of the Italic dialects.

Verner is no statesman or law-giver, but a modest Danish philologist, who, in 1875, published in *Kuhn's Zeitschrift* (vol. xxiii) the results of investigations which summarily explained a great residue of so-called "exceptions" to Grimm's law by referring them to the influence of a pro-ethnic system of word-accent. Thus the hitherto inexplicable discord between the *t* of *vater* (Goth. *fadar*) and the *d* of *bruder* (Goth. *brōthar*) was referred to the ancient accentual difference of πατήρ (Sanskr. *pitá*) and φράτωρ (Sanskr. *bhrátā*). On the same principle was explained the apparently arbitrary representation of pro ethnic *s*-, sometimes by *s*, sometimes by *r*. Thus the *r* of *ear* (Lithuan. *ausis*) and the *s* of *nose* (Sanskr. *násā*) both represent a pro-ethnic *s*, but the ancient accent followed in the former case and preceded in the latter. The fact that, in the original inflection of the preterite of strong verbs, the accent was upon the root in the singular, but upon the ending in the plural, explains the difference of consonant in *I was; we were*. German *er war*, like our vulgar "*he wor*," is due to the analogy of the plural.

It is this form of "Verner's law" in its application to the Germanic sibilants that Conway, by a happy inversion of ultramontanism, proclaims as a rule of order for their Italic brethren. It is a well-known phonetic law that *s* between vowels in Latin is changed to *r;* thus: *nefarius* but *nefastus*, *funeris* but *funestus*, *gero* but *gestum*, *virus:* Greek ἰός , etc. Still, a goodly number of exceptions have remained, despite all the juggling and conjuring of the grammarians, as *nasus*, *miser*, *asinus*, *quaeso*, *vasum*, *Caesar*, *casa*, *caseus*, *rosa*, etc. In all these, according to Conway, the *s* has been retained on account of the preceding accent.

In order to explain all the cases of change to *r*, he is obliged to assume that the accentuation of the period when rhotacism took place was not entirely the same as that of the classical age. Here his results lack certainty. A portion of the changes to *r* are also caused by the proximity of the vowels *i* and *u;* thus, while *quaéso*, which is used only in the first singular, preserves its *s*, *quaérit*, *quaérimus*, etc., accept *r* under the phonetic influence of *i*, and *quaerébam*, *quaerémus*, etc., through the shift of accent. The physiological reason for this influence of *i* and *u* is fully established by a course of proof that forms perhaps the most brilliant and universally serviceable feature of the essay.

The author appears to be unconscious that a suggestion of a solution similar to his own was made by Sophus Bugge in vol. xl of the *Rheinisches Museum* (1885), p. 475; and he takes no notice of an article by Wackernagel in vol. xxix of *Kuhn's Zeitschrift* (1887), pp. 127 seqq., which shows a similar though less far-reaching influence of the accent upon sibilants in Greek. The book is full of fruitful suggestions upon a wide range of subjects more or less directly connected with the principal theme.

Mr. Conway is a former scholar of Gonville and Caius College, Cambridge. Is it a mere coincidence that another recent English book, Roberts's 'Introduction to Greek Epigraphy' (1887), which shows a like careful use of latest German sources, though not the same fertility of thought and independence of judgment, should come from a fellow and tutor of the same college?

The Seminary Method of Original Study in the Historical Sciences illustrated from Church History. By Frank Hugh Foster, Professor of Church History in the Theological Seminary at Oberlin. Charles Scribner's Sons. 1888. Pp. xi, 129.

Teachers and advanced historical students will alike welcome Prof. Foster's lucid and suggestive little book. He has set out to do three things: to show that investigation is valuable to any student and practicable in any large college; to lead students into the best methods; and to show the special necessity for "seminary" training in the education of ministers. He has done all three things well. The first question which would be asked by a college president about a new method of instruction is: Does it help men on in the world? And though Prof. Foster does not discuss the bread-and-butter aspect, he does make it plain that the work of investigation pays; that it pays the world at large, through the knowledge opened up; that it pays the student, through an increase of power. The four chapters in which the author describes the seminary method are studded with suggestions; no one who is trying to learn something about history from the sources could fail to find help in them. The distinction between "guide-books," sources, and other men's work is made especially clear. The principal deficiency seems to be a failure to direct students at the beginning of their work to the primary bibliographical helps, such as Vallée's 'Bibliographie des Bibliographies,' Petzholdt, and the indexes to periodicals. In this, as in the two other parts of the volume, the constant illustration by specific examples adds to the value of the book and makes it useful to persons obliged to work without a teacher. The third part, on the application of the method in theological seminaries, has more than a pedagogic importance. The Church cannot hold educated men save by a fearless application of the principles of historical evidence to its own beginnings and doctrines. To train the clergy in investigation means not only that they will be more powerful and better equipped men, but that they will be able to meet the critic upon his own ground.

For the neatness of type and binding, and for the convenient table of contents and index, the author and publishers deserve the thanks of the reading public.

The Life of Amos A. Lawrence. With Extracts from his Diary and Correspondence. By his son, William Lawrence. Boston: Houghton, Mifflin & Co. 1888.

The author of this volume has discharged his filial office well. He has told enough, and with sufficient illustrations from journals and correspondence, to give a clear idea of his father's life and character, and we never, for a moment, wish that he had been less explicit in his details or less expansive in his treatment of particular matters. The proportions and the arrangement of the book are excellent, and the photographic illustrations are an admirable addition to the text. No amount of writing could have given so full and pleasant an idea of the house at "Cottage Farm" as the picture of its smothered cosiness. Mr. Lawrence suggests that the record of his father's work and motives may have an interest and inspiration which some may not find in the biographies of greater men. It may well be so, and we could wish that it might be very widely read by business men, especially by those having a great deal of money. But there is a class who need it even more—the labor reformers, for whom all capitalists are selfish knaves. Mr. Lawrence's methods of generosity and public spirit were not unexampled. There are many such as he in the community, and they are doing more to solve "the labor problem" than the Anti-Poverty Association and all the medicine men, more or less famous or infamous, who have each a panacea for our social ills.

Mr. Lawrence was well-born, being the second son of Amos Lawrence, one of the brothers of whose business energy the city of Lawrence, Mass., is the enduring monument, a man of great probity and simplicity and social earnestness. Young Amos was a good boy—even his Harvard rustication being a precautionary measure—but he was not so extremely virtuous that he could not write to his father: "The morality and general observations of your letters, disconnected from the other matters and printed, would make a very instructive volume." As early as his Senior year he developed for himself a scheme of life to which he was entirely true in after years, with the exception of its literary prospect. He meant to be a rich man with a literary and farming attachment. To wealth and farming he attained, but not to the literary part. He would hold his wealth in trust for others' good, as well as for his own enjoyment, and this he always did. One of his least successful business enterprises resulted from his acquaintance with the Rev. Eleazer Williams, of French Dauphin notoriety. The pretender wanted money on his Western lands, and gradually unloaded all of them on Mr. Lawrence, who, finding them very burdensome, did all he could to improve the intellectual and moral condition of the people living on them.

The chapters relating to Mr. Lawrence's political and anti-slavery action are the most interesting in the book. He was an anti-slavery Whig, much interested in Liberian emigration. The passage of the Kansas-Nebraska Bill was a great shock to the cheerful optimism he had been cherishing. He immediately became the principal coadjutor of Eli Thayer, whose Massachusetts Emigrants' Aid Association conspicuously aided in making Kansas a free State. He was the Treasurer of the Association, and he advanced all the money which its frequent stringency demanded, besides being the principal contributor to the funds. The town of Lawrence was named for him in token of his important aid. He was well acquainted with John Brown, and had great admiration for his character, while doubting the soundness of his judgment more and more as time went on. He headed the subscription which secured to Brown's family the North Elba farm. He had no knowledge of Brown's Virginia plans.

But all this experience did not make him an Abolitionist, nor even a Republican. It was his house that received Sumner after Brooks's attack, but a Fillmore flag hung over it. In 1860 he was the Union-saving Bell and Everett candidate for Governor of Massachusetts. In February, 1861, he went to Washington, with others, to urge the Crittenden Compromise. Failure awaited him, and he went home and—began to drill his friends and neighbors. The war found in him a vigorous champion. He could hardly be deterred from enlistment. He recruited the battalion of cavalry which was commanded by Col. Charles R. Lowell.

The charities that soothed the horrors of the war found him equally earnest, and when the war was over he was one of the prime movers in the building of Harvard Memorial Hall. He was a man of many benefactions, and of a domestic and social life so orderly and beautiful, so full of sweet amenities, that one cannot read the story of his life without a sense of high companionship. His manly independence was, perhaps, his most prominent trait, his connection with the Union-saving meeting after Harper's Ferry notwithstanding—for he was one of those whom Webster had indoctrinated with the idea that the Union was the *sine quâ non* of our political existence.

BOOKS OF THE WEEK.

Alexander, S. B. The Veiled Beyond: A Romance of the Adepts. Cassell & Co. 50 cents.

HENRY HOLT & CO., Publishers, New York.

OLD NORTHWEST:

With a view of the Thirteen Colonies as constituted by the Royal Charters. By B. A. HINSDALE, Ph.D., Prof. in University of Michigan, Editor of the Works of James A. Garfield. 1 vol. 8vo, 450 pages, 10 maps, $2.50. Full margin, uncut edges, $3.00.

The most important territorial question treated in American diplomacy.

The only part of the United States ever under a secondary constitution.

The theatre of the second colonization of America by the original States.

Its relation to great national and international questions.

No previous writer has covered the ground, and the work is wholly new in conception.

Scribner & Welford's

NEW BOOKS.

By Author of 'Handley Cross,' etc.

Hillingdon Hall;

Or, The Cockney Squire. A Tale of Country Life. By R. S. Surtees, author of 'Handley Cross,' 'Jorrocks's Jaunts and Jollities,' etc. 12 full-page illustrations by Wildrake Heath, Jellicoe, printed on Whatman paper and colored by hand. Demy 8vo, 520 pp., cloth, $4.00.

NOTE.—This, one of the best of Mr. Surtees's works, was originally commenced in the "New Sporting Magazine," and illustrated by the inimitable artists, Wildrake and Heath, but was not completed in that magazine. It was afterward published complete in a three-volume edition. The five illustrations now added are by John Jellicoe, and illustrate the latter portion of the work not done by Wildrake or Heath.

Princetoniana:

Charles and A. A. Hodge, with Class and Table Talk of Hodge the Younger. By a Scottish Princetonian, the Rev. Charles A. Salmond, M.A., Rothesay. With portraits, etc. Crown 8vo, cloth, $1.25.

"A very interesting work. . . . The agreeable conversational style in which the brief memoirs are written makes this part of the work pleasant to read beyond the common run of similar memorials. The collection of jottings from the lectures and table talk of Dr. A. A. Hodge is valuable for the racy vivacity and point of the various utterances, which have quite as much biographical as theological significance. . . . Will be welcomed as an interesting memorial of two memorable men, and as a vivid sketch of the manner in which theology is taught at Princeton."—*Scotsman.*

The Bastille.

By Captain the Hon. D. A. Bingham. With numerous illustrations, 2 vols., demy 8vo, cloth, $8.00.

"Captain Bingham's work is exhaustive, and it will take rank as an indispensable and most valuable book."—N. *Y. Tribune.*

THE MEMOIRS OF THE

Margravine of Baireuth

Translated and edited by H. R. H. Princess Christian. In 8vo, cloth extra, $3.75.

The Margravine was the sister of Frederick the Great, and exerted great influence over his character. Her Diary is a wonderful narrative of the petty intrigues and gossip of the German Court.

The volume has as frontispiece an Autotype Copy of the Portrait in Berlin.

Baedeker's European Guide-Books.

FULL SUPPLY OF LATEST EDITIONS just received. Illustrated with numerous maps, plans, panoramas, and views.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse." —R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE,

The Nation.

NEW YORK, THURSDAY, MAY 24, 1888.

The Week.

NOT since Grant's renomination for a second term has any national party entered a convention so united in support of one candidate as the Democratic party will be when it assembles at St. Louis on June 5. If there be an omen of victory in the much-sought-after act of "presenting a solid front to the enemy," the Democrats will have the benefit of it this year. Not only are they unanimously in favor of their candidate, but they have also gone on the record with equal unanimity in favor of the principles which he represents. Not a single State convention has thus far expressed dissent from his tariff message, and nearly every one has emphatically approved it, thus making it the leading issue in the campaign. The opening utterance of the Ohio Democratic platform gives an inkling of the amount of latent enthusiasm that is likely to be found in the President's personality this year: "We endorse, without qualification, the Administration of President Cleveland. His honesty, integrity, fidelity to principle, and manly courage have endeared him to the American people, and the interests of the country demand his renomination and election." When that was read to the Convention they broke into a perfect tumult of cheers. Similar scenes have been witnessed in every other State convention which has been held. They bear witness, as does the unbroken line of Cleveland delegates, to the fact that the Democratic party has found a leader and a principle, and has something definite to fight for.

On the Republican side the forecast cannot be so clearly made. The most obvious fact in the situation there is, that Mr. Blaine will enter the Chicago Convention, which meets on June 19, with a large proportion of the delegates in favor of his nomination in preference to that of any other candidate. It is not necessary to go into the question of how these delegates have been secured. Many of them possibly owe their selection to shrewd political manœuvring, but it is undoubtedly true that he is the spontaneous first choice of the overwhelming majority of the rank and file of his party. This is especially true of the Eastern and Middle States. In all the New England States, delegates have been chosen who, whatever may be their avowed preferences, are at heart in favor of him. Of the New Jersey delegation there is little doubt that the same thing is true. The New York delegation is nominally uninstructed, but it is understood to have a majority in favor of Mr. Blaine, and to be in the control of Tom Platt, who declares his conviction that Blaine is the inevitable candidate. The delegations from the Western States are divided up among a large number of favorite sons, but, with the exception of the Illinois instruction for Judge Gresham, none of them are under formal directions which will in any way prevent them from giving their votes to Mr. Blaine. It is known that many of these delegates are at heart Blaine men, and are only restrained from supporting his renomination by fears of its inexpediency. As for the Southern delegations, while Senator Sherman has been able to retain enough of his former power in the South to secure the nominal support of many of them, they will go to the Convention a more or less open band of political mercenaries, ready to give their support to the highest bidder. If Mr. Blaine is to be defeated, the Western delegations will have to perform the work.

It seems to be conceded on all hands that the Gresham boom is making steady and rapid progress in the West, and the effects of it are visibly felt in Washington, and even in this city. The open avowal in favor of it which Judge Kelley has given, is significant as showing that the high-tariff Republicans are willing to take some other man than Blaine. The struggle in the National Convention is very likely to be between Blaine and Gresham, and for that reason the *aut Blaine aut nullus* cohort are sharpening their knives to the keenest edge for the Judge. If they are not able to nominate Blaine, they will bend all their strength to accomplish the defeat of Gresham. They have strength enough at present, apparently, to do that, but there are signs of a spirit of wrath in the party which may develop sufficiently by the time the Convention meets to make it less tolerant than it is now of the Blaine manœuvring.

Gen. Black, now Commissioner of the Pension Bureau, is said to be a candidate for nomination for Vice-President at the Democratic Convention, and a "boom" of some sort has been set on foot for this purpose either by himself or some of his friends. We think the public is entitled to ask for more moderation at Gen. Black's hands in matters of this sort. It is not very long since a bill was pushed through Congress giving him a pension of $100 a month—the highest ever bestowed on anybody—on the express ground that he was a complete "physical wreck, incapable of any effort, helpless in both arms," and that "it was only a question of how long he would live." After he got the pension, however, his condition did not prevent his seeking, and obtaining, and administering, with much politics, the office of Commissioner of Pensions, which he now holds. No man drawing a pension of $1,200 a year as a "physical wreck" ought to hold any salaried public office. If Gen. Black is well enough to hold the office, he ought not to draw the pension; if he is ill enough to draw the pension, he ought not to hold the office. We trust that he is not now going to cap the climax of his absurdity by asking for the Vice-Presidency of the United States. The President ought in some way to discourage Gen. Black. He is evidently too little of a wreck either for his own good or that of the public.

The latest batch of vetoes of private pension bills illustrate afresh the evil tendencies of such legislation. One case is that of Mrs. Sally A. Randall of Norwich, Conn. Mr. Randall died in 1873, twenty years after their marriage; he had never served in the army. But this was the woman's second marriage; her first husband was Antipas Tabor, who enlisted in the war of 1812 and died in 1831. No claim is made that he received any injury in the army, or that his death was in the slightest degree related to his military service. His wife was born during his time of enlistment, and her first widowhood had no connection with any incident or condition of health traceable to his service. But Mrs. Randall is now seventy-five years old, in poor health and in needy circumstances. The idea occurred to somebody that the Federal Government might be made to assume her support, on the ground that Mr. Tabor, who died nearly sixty years ago had served in the army seventy-five years ago. "Prominent citizens" were readily induced to sign a petition for the application of a small slice of the surplus to this purpose, and "our member" pushed the bill through Congress. Probably everybody who voted for it would have admitted that it was, as the President says, "a bad precedent," but Mrs. Randall appears to be a worthy woman, and it was much easier to assent to giving her a support from the Treasury at Washington than to refuse the pension and tell the truth about the matter, as the President does in this sentence: "All this certainly commends her case to the kindness and benevolence of the citizens mentioned, and the State of Connecticut ought not to allow her to be in needy circumstances."

It is easier to excuse action which seems like charity to a deserving woman than to have patience with the premium placed upon dishonesty by the passage of such bills as the one granting a pension to William H. Hester. This man claims that while he was in the service in 1869 he encountered a sand-storm, and that the sand blew into his eyes to such a degree as to result in nearly if not quite total blindness. It appears that the House Committee which investigated the case conceded that the claim made by this man to the Pension Bureau was largely supported by perjury and forgery, but they tried to saddle the responsibility upon three rogues and scoundrels who undertook to obtain the pension, and to hold the claimant himself innocent of any complicity in the fraud. The evidence, however, leaves no excuse for so charitable a theory. Hester swore that the sand-storm occurred January 15, 1869, and that his eyes were so cut that he was hardly able to see or get about, and was cared for by Edward

N. Baldwin. But Mr. Baldwin, while admitting that he knew Hester and bunked with him in January, 1869, declares that he never saw any sand-storm and never knew that Hester had bad eyes, or was anything but sound and well at any time, except once when he had eaten too much. Mr. Baldwin was shown an affidavit purporting to be made by him and sustaining Hester's story, which he declared to be false and a forgery. The President declares with pardonable severity that he believes this claim for pension to be "a fraud from beginning to end;" and he adds that "the effrontery with which it has been pushed shows the necessity of a careful examination of these cases."

The debate on the tariff now going on in the House of Representatives is, and ought to be considered, the most interesting we have had since the return to specie payments. It is not often, too, that, as in this case, the subject of a debate in Congress is the very issue on which an approaching Presidential election is to turn. Moreover, the debate has been conducted with great ability on both sides, though we naturally incline to consider the speeches of Mr. Mills, Mr. Wilson, Mr. Fitch, and Mr. Russell much superior to anything produced on the Protectionist side. Would not one expect that under these circumstances the leading New York morning papers would give reports more or less full of the speeches on both sides, or at all events on their own side, respectively? Would it not be good journalism to do so, especially if we take literally all the boasting and romancing about the "function of the newspaper" which one hears from the professors and the editors? There is nothing visionary about this demand either. The London *Times*, as well as other English papers, reports the speeches on both sides, on great occasions, with a fairness which we have never seen reason to question, to the great honor of the journalistic art. But the melancholy truth is, that our public is not permitted to hear anything of what is said in Congress on this most interesting question. It is rare to find in any paper we know of, except the Philadelphia *Ledger*, more than a brief summary of a speech of the member of its own party, or a few lines of burlesque of others. This is literally true of all the speeches thus far delivered in this most important debate, which ought to be doing so much for popular education on the most important question of the day. If it be pleaded that newspapers cannot find room for such reports, the answer is that they would be more important just now than the petty gossip for which abundance of room is always found.

When the Mills bill was reported by the Committee of Ways and Means, a great cry was raised by the producers of pig-iron against the proposed reduction of seventy-two cents per ton on that article. We have before us at the present moment a pamphlet issued by a number of Eastern furnace-owners protesting against this fatal blow at their industry. They show to a dead certainty that pig-iron cannot be produced at a profit east of the Alleghanies if the tariff is reduced to $6 per ton, and that it is only by the most grinding economy that it can be made under the present duty of $6.72 per ton. It is further stated in this pamphlet that a reduction to $6 will check production in the West, since freights by way of the St. Lawrence and the Mississippi Rivers are merely nominal, enabling the British manufacturers to pour their products into the interior of the country almost as readily as on the Atlantic seaboard. While we were musing on this disastrous state of things and contemplating the speedy destruction of a great industry, we were surprised to read in the Philadelphia *Press* that the Thomas Iron Company had reduced its prices of pig-metal $2 per ton in advance of any action of Congress. In other words, the voluntary reduction made by the principal producers east of the Alleghanies is $1.28 greater than the proposed reduction in the Mills bill.

The reason for this reduction is stated by the *Press* in the following words:

"Taking a broad view of the matter, it is believed that these reductions will be of local advantage, as the West and South have for some time been running away with valuable portions of the Eastern iron trade because of their lower prices. As a matter of fact, the dulness has not been so much because of a scarcity of business, but because mills and furnaces could not meet the prices made by their more distant competitors."

What a precious lot of humbugs you are! If this reduction of $2 per ton had been brought about by a tariff bill, you would have rent the air with cries, you would have cut down wages and discharged a lot of workmen, and appealed to heaven to witness the distress that free trade was bringing upon the country; and you would have said that British manufacturers were crushing American industry. But when the same fall in prices is brought about by your effort to undersell the Western and Southern producers, it is all right, nobody is harmed, no workmen are discharged, and American industry continues to be of good cheer.

The decision of the Supreme Court of Michigan that the Local-Option Law of that State is unconstitutional and void because of defective title, is a forcible reminder of the slipshod character of much of our State law-making. The law in question was passed by the Legislature of 1887, and, working in conjunction with the stringent High-Tax Law which Michigan has had for several years, promised to make the State one of the best regulated in the country so far as the liquor traffic is concerned. Nearly half the counties, thirty-five out of eighty-three, had voted against all sales of liquor, so that a large part of the State was virtually enjoying prohibition. The decision undoes all this work until the Legislature meets next year, when in all probability the law will be passed again with a proper title. It is a curious and instructive fact that the two elements of the State's population most rejoiced by the decision are the liquor-dealers and the professional prohibitionists. Both have the same reason, however—that the law was seriously interfering with their business.

For the first time in the history of the country a State is about to elect two United States Senators, each of whom will be given a full six years' term. When the original States first elected Senators, each Legislature chose two men, but the Constitution provided that "immediately after they shall be assembled, in consequence of the first election, they shall be divided, as equally as may be, into three classes," the term of one class expiring in two years, the second in four, and the third in six, so that one-third of the body should be chosen every second year. Thus New York elected Rufus King and Philip Schuyler, but Schuyler fell into the first class, so that his term expired in two years. In like manner, when Colorado came into the Union in 1877, Chaffee dropped into the first class, with only two years to serve, while Teller was allotted to the six years' class. Of course, after the terms for each State have thus been fixed at the outset, each successor to a Senator of any class is chosen for six years. Even if a Legislature meets only once in two years, it can never happen that it will have to choose more than one Senator in the natural course of things (death or resignation excepted), since the term of his colleague will not expire until after the next Legislature has been chosen. Louisiana, however, by the new Constitution adopted in 1879, gave the Legislature a four years' term, and as a result it happens that the body chosen last month must choose not only a Senator for the term beginning in March, 1889, but also one for the term beginning in March, 1891. Mr. Gibson, whose term expires next year, easily secured the caucus nomination for reëlection last week, but there seems likely to be a hard contest over the other seat. The system under which a Legislature chosen in April, 1888, disposes of a Senatorship which does not fall vacant until March, 1891, is not only anomalous, but contrary to the principle of representative institutions, and ought to be changed.

We feel it to be our duty to warn the public against the suggestion made by Col. Elliott F. Shepard, in the columns of his newspaper, that much reading of the *Mail and Express* will impair the value of libraries, if it does not lead to their suppression altogether. Although the Colonel's reproduction of the Scriptures on his editorial page supplies a long-felt public want, it has never been his intention to supersede that volume, or to enter into competition with the Bible Society. But it is his announced purpose to make the *Mail and Express* so complete a repository of learning that the files of that paper will hereafter be more frequently referred to than the standard treatises on "history, geography, biography, politics, finance, trades, arts, medicine, sports, humor, sciences, eloquence." This looks as though the Colonel were about to establish a Trust for the purpose of monopolizing Thought. But we are convinced that the book trade is too important to be crushed out in this ruthless fashion. Col. Shepard

ought to be content with superseding the special periodical literature of the day, the historical magazines, the medical weeklies, the art and engineering journals, and keep off the domain of the book publishers, who really render a valuable service to the social economy.

A correspondent writes to us calling attention to a plan produced by Dr. Garnett at the recent meeting of the American Medical Association in Cincinnati for limiting the annual number of medical graduates. Dr. Garnett, who is President of the Association, proposed in his address the appointment of a committee in each State to attend the sessions of their respective Legislatures "for the purpose of using all honorable means looking to the reduction of the number of medical schools in the United States, and a consequent diminution in the annual number of medical graduates," and procuring the abolition of all medical schools "failing to show a greater number than fifty matriculates annually for three successive years." Our correspondent maintains that this is a manifestation of one of the worst features of trades-unionism on the part of the educated class, and as such expects us to denounce it. We cannot, however, see anything wrong in it. On the contrary, it seems to us highly commendable. Of course the assembled doctors, who received it with "storms of applause," may be actuated simply by a desire to keep down competition in their profession, but, whatever their motive, the public would gain by the carrying out of their scheme. It may be laid down as a rule that there can be no proper medical school where there are no large hospitals. Medicine cannot be taught out of books, and the country is cursed with a swarm of little medical schools which do not attempt to teach it in any other way. If there be any good way of suppressing them, it ought to be done, because untrained doctors are the worst kind of impostors. They ought to be hunted down and extirpated. But we do not ourselves think there is any good foundation for the notion that doctors are opposed to the multiplication of medical colleges because they fear competition. If every little college in the country were abolished to-morrow, the competition supplied by the large colleges would be, for all practical purposes, as great as it is now, but the poor and ignorant would be better protected against quacks and charlatans and ignoramuses.

The liquor question has been brought up in England in a very exasperating shape to the friends of temperance, by a provision in the new County Government Bill which recognizes a vested interest in their licenses on the part of liquor-dealers—that is, gives any dealer a right to compensation if a renewal of his license should be refused for any reason except misconduct. This provision was evidently put in as a sop for the liquor-dealers, or "licensed victuallers," as they are called in England, who are a very powerful body in politics there, as they are here. The whole Liberal party, as well as the temperance people proper, are up in arms against the clause, and the Ministry at first tried to defend it by saying it was based on the legal opinion of their law officers that there was a legal vested right in licenses. This opinion was, however, speedily overthrown, and more recently pronounced utterly unfounded by the Court of Queen's Bench. Sir William Harcourt, in one of the sledge-hammer speeches which he every now and then inflicts on the Tories, and which have sometimes been denounced even by his political friends as "cruel and unusual punishment," said on this subject the other day:

"You have had restrictions of all kinds growing up, and, I am happy to say, growing every year, upon the liquor traffic. You have had Sunday closing in Ireland, in Scotland, and in Wales. You have taken away by Sunday closing one-seventh part of the traffic, and you have given no compensation. You have restricted the hours, which, of course, is a diminution of right, if it be a right, and you have given no compensation. This very question has been tried before the highest tribunal in the United States, in the Supreme Court, and where the traffic has been entirely abolished the courts have determined that no question, no legal or equitable question, of compensation arises at all. [Cheers.] I speak very earnestly to you, gentlemen, upon this subject, which the Liberal party ought to fight boldly to the last. [Cheers.] It involves the question of putting a fine of millions upon millions of money upon those—who, I am happy to think, are growing every day—who wish to put a check upon a traffic which I think people are becoming more and more convinced is injurious to the best interests of the community. [Cheers.]"

There can hardly be a doubt now that the Pope has made a mistake in meddling in the Irish question. The Irish Catholic members of Parliament have, at a meeting in Dublin, united in an answer to his rescript, in which they firmly, but in respectful terms, deny the competency of the Roman Congregation to interfere in the matter at all, refuse to be bound by its utterances on the question of morals, and suggest that it has been deceived as to the facts, and especially the central fact of the Irish case, viz.: that all or nearly all the improvements on the land have been made by the tenants, who have been for a century compelled to pay rent for the use of their own additions to the landlord's property. It is not, however, because he may have been misinformed or ill-informed about the facts that the Pope is at fault. It is because it is impossible for an observer at a distance to get such a clear view of any great popular movement as to be able to pronounce an absolute judgment on its morality—that is, such a judgment as a priest has to give in the confessional. He may form a judgment good enough for a political speech, or review, or newspaper article, but he cannot form a judgment fit to be embodied in a quasi-divine admonition. The plan of campaign is one of those affairs in which each case has to be judged on its merits. There are cases in which it inflicts atrocious wrong; there are others in which no moralist can severely condemn it. The man to make the necessary distinctions in the name of religion, if anybody, is the priest on the spot to whom the campaigners confess their sins. He knows ten times as much about it as any committee of Italian cardinals can possibly know. And then it is a very serious matter for the Papacy to have the Irish, of all people, disputing its authority on a question of morals. They are, except the Tyrolese and Bretons, the only mediæval Catholics left. To quarrel with them, or weaken their allegiance, is like spending in extravagant display the remnants of a handsome patrimony.

From a Rio letter to the Paris *Brésil* we learn the probable outlines of the emancipation measure just passed by the Brazilian Parliament. As they were copied from another paper into Senhor Antonio Prado's organ, without contradiction, they doubtless represent the programme of the new Administration. Emancipation is made universal and immediate, but the enfranchised slaves must labor for three months, to save the impending harvest, at wages fixed by law. Thereafter they will be free to make contracts in accordance with the law of supply and demand. For two years, however, the freedman is confined to the municipal district where he lives, and obliged to engage in some definite occupation. Vagabondage will be punished by imprisonment with forced labor on the public works. The *ingenuos*, a class intermediate between slaves and freemen, are discharged from all further obligatory service, and enter into the full possession of civil rights. There is abundant evidence, from experiments made in every province, that, even without the legal precautions just enumerated, immediate emancipation has no menace for the industry of the country.

The precise whereabouts of Stanley, the explorer, is now a subject of anxious discussion among European newspapers and geographers. Ten months ago he left the last point from which news of him was received, that is, the camp of Yambunga. On the 10th of August, 1887, he wrote to this post, asking that fresh supplies of provisions might be sent him. Since then nothing has been heard of him. Between this point and Wadelai, the first station at which he would strike the territory of Emin Pasha, he had about 600 miles to travel through a swampy, but not impassable country. In Stanley's last letter he fixed August 15 as the date at which he should get into the lake country, where Emin Pasha would have been sure to hear of him; but Emin Pasha wrote on November 2 that he had heard nothing of him. It is unlikely that Stanley has fallen into an ambuscade and been massacred. He has 484 men, what with carriers and soldiers, who are well armed, and he is himself in this sort of warfare an experienced commander. Still another hypothesis has been propounded, namely, that having fully satisfied himself of Emin Pasha's safety and unwillingness to be "rescued," he has turned southward to do some more exploring on his own account, and will come out in the direction of Zanzibar. Everything that is said about him is thus far mere guesswork.

PETER AND PAUL.

Of all the pleasing delusions with which the high tariff is surrounded, not one has rendered half the service in politics rendered by the notion that the more profits the tariff enabled the manufacturer to make, the higher wages he paid his workmen; and that the smaller his profits were, the worse off would his workmen be. This, like some of the stories about the effect of the tariff of 1846 on business, has passed current in nearly every protectionist speech and article for the past twenty-five years, as one of the things which nobody would gainsay. Free-traders might question whether it was worth while or just to maintain a high tariff in order to enable employers to pay high wages, but that a high tariff did enable and even force employers to pay higher wages, it was assumed that no candid person would deny. Tariff reformers might say that taking money from the consumer in order to hand it over to the manufacturer's employee, was robbing Peter to pay Paul, but it was always taken for granted that Paul got the money.

Now one of the great benefits bestowed on the public by the pending debate in Congress, is its having brought out clearly the fact that in the matter of the tariff, as in many other things, the people who rob Peter to pay Paul do not, as a rule, pay Paul at all; they keep the money themselves. They say to Peter when they are rifling his pockets: "Oh, come, now, you have more money than you know what to do with; we must help Paul, so don't make a fuss. Hand over your 47 per cent., and cheer poor Paul's home." Having got it, they simply go outside and divide it among themselves, and when they meet Paul offer him the market rate of wages for a hard day's work, and if he remonstrates tell him that there are now so many Pauls who would like the job on the same terms, that he would be wise not to complain.

In plainer English, American protected manufacturers, no matter how much they were protected from foreign competition, have followed in their dealings with their workmen the immemorial and perfectly fair rule of paying for labor the market rate as determined by supply and demand. We believe there is not the shadow of proof anywhere that wages have had any other relation to profits in America than that which exists in England or any other country, or that any American manufacturer ever paid more for satisfactory labor than he could get other equally satisfactory labor for by advertising, or, in fact, that the tariff has ever been permitted in any part of the country to interfere with the natural and usual effect of competition in keeping wages down.

All this has been brought out with admirable force and effect in the speeches of Mr. Mills, Mr. Wilson, and Mr. Scott. The way the wages argument tumbled to pieces when Mr. Mills touched it with one or two of the commonest facts of daily life, was a striking illustration of what discussion does for a question of this kind. He said:

"It is said a high tariff makes high wages for labor. It is said if we reduce the tariff, wages must be reduced. How is it high tariff makes high wages for labor? How can it be explained? Why, they say, as a matter of course, if you increase the value of the domestic product, the manufacturer is able to pay higher wages. Unquestionably he is; but does he do it? No. Mr. Jay Gould, with his immense income from his railroad property, is able to pay his bootblack $500 a day, but does he do it? Oh no; he pays the market price of the street. He gets his boots blacked and pays his nickel like a little man. [Laughter.] Mr. Vanderbilt, from the income arising from the interest on the immense amount of bonds of the Federal Government he has got, can afford to pay his hostler $10,000 a year. He is able to do it, his bonds enable him to do it; but does he do it? Oh, no; he goes out into the market and employs his labor at the market value, and pays the same price that the humblest citizen in New York does.

"High tariff does not regulate wages. Wages are regulated by demand and supply, and the capacity of the laborer to do the work for which he is employed. If high tariff regulated wages, how is it the wages in the different States of the Union are different, while the tariff is all the same from Maine to California? In every part of the territory of the United States the tariff is the same. How is it the wages are not the same? How is it that wages in the different localities of the different States are different? What is the cause? What is it which disturbs the tariff and prevents it from fixing a high rate of wages all over the country for labor?"

In other words, when the manufacturer, as a rich man, turns round to pay his laborers, he does what all sensible rich men do—pays them exactly what their labor is worth. He does not say one word to Paul about his transactions with Peter. He says to himself that his business with Peter is his own affair; that in dealing with Paul he is bound to extend to Paul whatever consideration Paul gets from everybody else, and no more. When Paul goes to the grocer's to buy flour or sugar, the grocer never says to him that he has just made a lucky turn in stocks or real estate, and is on the whole so well off that he will take 25 per cent. off the flour or the sugar. He exacts the full market price no matter how rich he feels. And the manufacturer likewise thinks and acts about the advantages he has persuaded Congress to give him through the tariff just as Thurber or Park & Tilford would think or act about a lucky venture in stocks or real estate. It is the product of his capacity and pertinacity—the legitimate return of his lobbying in Washington, or of his contribution to the Republican campaign fund. He is not stingy with it, to be sure. He is quite ready to give largely of it to libraries, and fountains, and hospitals, and schools, and colleges, and other philanthropic or charitable objects; but to divide it with Paul, as Paul's rightful share, is something he never thinks of at all. What he gives, he gives, but he only pays what he owes and can be made to pay.

It is not wonderful that in view of these things Peter should be waking up and asking whether it is not time to stop making contributions for Paul's benefit, not one cent of which Paul ever handles or profits by. For, naturally enough, Peter is not consoled by hearing that even if Paul does not get the money, it is spent in a splendid manner, by men like Mr. Carnegie, in founding libraries, or in "new and improved works to develop still further the resources of this great republic." Peter is now inquiring whether he is not himself the best person to display generosity with his own money, and whether, if the resources of this great republic are to be still further developed at his expense, he is not perfectly competent either to handle the funds himself during the process, or lend them for the purpose on approved security. This is one of the questions which the voters will this year be called on to answer, and they will answer it with a fulness of knowledge they have never had before, for the simple reason that Peter and Paul are at last coming together, and comparing notes, and finding out how monstrously they have been imposed upon.

THE SENATE AND THE TREATY.

We have commented on the gravity of the statement made by the majority of the Senate Committee on Foreign Relations, in respect to the fishery dispute, that "it does not seem to the Committee that the existing matters of difficulty are subjects for treaty negotiation." To this statement the signatures of Senators Sherman, Edmunds, Frye, Evarts, and Dolph are appended. It is safe to say that if the Republican party were charged with the responsibilities of the executive branch of the Government, so that their words should practically be the voice of the nation, no such declaration would have been made by them. They would as soon have put their hands in the fire as put them to such a document. It is a declaration of an intention to apply coercion to the greatest naval Power of the world, at a time, too, when we have made no preparation for a conflict even with one of the lesser Powers, and when confessedly we can make no adequate preparation under ten years, if under twenty. If war is not intended, further embroilment certainly is intended, and we all know that embroilment commonly leads to war, and especially embroilment which is chosen in preference to any kind of treaty negotiation. The truth plainly is, that these Senators rely upon the prudence of the executive branch of the Government and the amicable feelings of the two nations to avoid any unhappy consequences resulting from their words. They have constructed a campaign document, and as such their work must be judged.

There is no probability that the people will take more interest in the fishery question this year than they did last year or the year before. Certainly they will not take much interest in the matters of detail which constitute the grounds of the dispute. The only things they will fully comprehend will be the fact that a treaty has been made, and that it has been rejected, not because it was a bad treaty, but because the subject-matter was not one for negotiation at all. Then the reasons why it is not as good a subject for negotiation now as it was in 1783, in 1818, in 1854, and in 1871 will have to be given. More than this, it will be necessary to show in what way continued embroilment with the possibility of war is preferable to any kind of a treaty,

for, as the minority of the Committee tell us, the majority declined to say how the treaty might be made satisfactory, or to offer any amendment looking to that end.

Preliminary to this we must have some justification—some statement of grievances so incurable in the very nature of things that the only escape from them is by successful war. As the minority of the Committee say: "Unless we can clearly state the causes that justify a war for the redress of grievances, or a clear definition of the right we seek to assert or defend, we have no right to subject the country to the perils, or even the apprehensions, of hostilities. It has never been stated by any administration, or diplomatist, or by Congress, that any one case, or that all the cases that have grown out of our disputes with Great Britain about the Treaty of 1818, gave a just ground for retaliation, reprisals, or war." No. The only declarations we have had of that nature have been made on the stump or in the newspapers. No person or body carrying the issues of peace or war in his or their hands has ventured so far.

It appears to us that there are reasons why both parties, and especially the Republican party, should not bring the fishery dispute, as a practical firebrand, into the campaign. If the report of the majority is a good campaign document, its merits will be better appreciated in the abstract than in the concrete. Arrangements have been provided whereby no fisherman need get into difficulties unless he desires to, pending the deliberations of the Senate. But if the treaty is now rejected, we shall probably have seizures and grievances of one kind or another sufficient to distract public attention from the real issues of the campaign. If the tariff question, pure and simple, is the thing which the Republicans have long ardently desired a Presidential battle upon, they ought not to put their success in jeopardy by introducing a question of peace or war with a foreign Power, especially in our present state of unpreparedness. It will not be wise to cater to the dynamite Irish vote at the risk of losing a large share of the moral and religious element of the party. If any excitement grows out of the fishing difficulties, it will necessarily bring into prominence the efforts made by the Administration to avoid them, the means adopted to narrow and minimize them, and the pains taken by the Senate to aggravate and multiply them. It will bring into relief the civilizing tendencies of the one side, and the opposite, we might almost say bullying, proclivities of the other; for we cannot consider in a less favorable light the declaration of the majority that no treaty at all is wanted, and that the subject-matter does not admit of one. By all means let the treaty go over to next winter, so that we may have a campaign exclusively upon home issues and home industry.

THE VICE-PRESIDENCY.

"Such an officer as Vice-President is not wanted," said Hugh Williamson, a delegate from North Carolina, in the convention which framed the Federal Constitution, and this view found no little support in the body. But it was obvious that provision must be made for the immediate transfer of the executive power to some person in case of the death of the President; and as a number of the States had instituted the practice of choosing a Lieutenant-Governor with especial view to such a contingency, the same system was adopted for the nation. To give the Vice-President a position of consequence, as well as the potentiality of the highest power, and to furnish a further excuse for his existence, he was made presiding officer of the Senate, with the right to the casting vote in case of an equal division.

The framers of the Constitution supposed that they had insured the choice of men of the highest ability and character for the Vice-Presidency by the mode of selection adopted. Each State was to choose electors, who were in turn to choose the President and Vice-President. They were to possess unrestricted liberty of choice, and it was expected that they would be a select body of distinguished citizens, "most likely," in the words of the *Federalist*, "to possess the information and discernment requisite to such complicated investigations" as must be made in deciding between the various aspirants to the Presidency. As the person having the second largest number of votes was to be Vice-President, it was supposed that the latter official would always be a man who was held worthy of the highest place by a large proportion of his fellow-citizens.

At first the theory promised to work well in practice. John Adams was as worthy as any man after Washington to be President, and he was therefore properly elected first Vice-President. As a man who was worthy of the Vice-Presidency might well be promoted to the Presidency, the first man to hold the second office was given the highest place upon Washington's withdrawal. A very even division in the first Senate made the presiding officer of the body a real power in legislation, Adams giving as many as twenty casting votes upon questions of vital importance during the first two years of the new Government. But the election of 1796, by which Adams the Federalist became President, and Jefferson the Republican Vice-President, showed that the system of voting for two persons without specifying a choice for President presented such temptations to intrigue, and left so much to accident, that, after the controversy between Jefferson and Burr in 1800, the nation readily made the change by which the electors specify the offices, and not long after the electors lost their independence altogether, and became, as they now are, mere recording machines of the popular vote.

There was no immediate change in the character of the men chosen to the Vice-Presidency. Such leaders in their day as Aaron Burr, George Clinton, Elbridge Gerry, Daniel D. Tompkins, John C. Calhoun, and Martin Van Buren, readily accepted the office, and occasionally one of them made himself a power in legislation, as when Clinton in 1811 negatived the renewal of the charter of the United States Bank. Calhoun, who filled the place during two Presidential terms, was not able thus to impress himself upon the course of legislation, but while he held it he vastly strengthened his equipment as a constitutional statesman. "The station, from its leisure," he said years afterwards, "gave me a good opportunity to study the genius of the prominent measure of the day, called then the American system, by which I profited."

Half-a-century has wrought a great change both in the estimation of the office and in the character of the men usually presented to fill it. During the greater part of that time the dominant party, whichever it might be, had so large a majority in the Senate that the Vice-President was almost never called upon for a vote, and he has thus been reduced to utter insignificance in legislation, insomuch that an occupant of the chair has remarked bitterly that it almost seemed as though a well-trained parrot could take his place. Nothing can be imagined more distasteful to a man who has been a prominent figure in either branch of Congress, than to be suddenly deprived of the power even to open his mouth on the merits of a question in which he may be profoundly interested. William A. Wheeler, the last incumbent who served the full four years, had been a man of much consequence in the House of Representatives, and he chafed constantly under the limitations of his position in the Senate Chamber. So unattractive and even repellent is the place that men who have become familiar with it, like John Sherman and Gen. Hawley for example, declare with perfect honesty their utter unwillingness to accept it; and a party sometimes almost needs to exercise compulsion to secure for it a man who is worthy to fill the higher office to which it may any day prove the stepping-stone.

For this is the unfortunate feature of the matter, that while the Vice-Presidency repels the best men, only the best men ought to have the place, because of its possibilities with reference to the Presidency. Four of the eighteen men elected to the Presidency during our first century have died in office, and Vice-Presidents have occupied the White House for periods of three years and eleven months, two years and eight months, three years and ten months, and three years and five months. In four Presidential terms out of twenty-five the Vice-President has been President nearly the whole period, the chief power during 14 years out of 100 having resided with a man who was not vested with it by the people. According to the law of average, therefore, there must be held to be one chance in six that any man chosen Vice-President will become President, and consequently every man chosen to the second place ought to be worthy of the first.

Unhappily, however, the Vice-President comes to his place almost without a thought of his qualifications for the Presidency. He is the choice in the first instance of a nominating convention, and his selection there is due to considerations of "availability" as a candidate in a campaign. He is hastily picked out to strengthen the ticket in a doubtful State, like Hendricks in 1884; or as the representative of a faction in the Convention which

has failed to get its candidate for President, like Arthur in 1880; or to represent some "element," like Johnson in 1864 as the type of the loyal man in the border States. It is safe to say that no delegate who voted for Johnson in 1864 ever thought of his becoming President, or raised the question whether he was fit to be President; the same thing was equally true in Arthur's case sixteen years later. If either had been suggested in the Convention as a candidate for the highest place, he would not have received a single vote, but each filled it for almost a whole term.

There appears to be no feasible method of changing the character of the office so as to make it more desirable, but it is possible to elevate the standard of the men elected to it. Disagreeable as it may appear to the eager debater, the position is not without its attractions to the thoughtful man, and it would doubtless still be practicable to secure its acceptance by a man of Calhoun's type. The effort certainly should be made by each party. While we may hope to escape assassination, the cases of Harrison and Taylor show that natural causes may cause a vacancy, and the warnings of forty years ago should be heeded, even if one does not fear another Booth or Guiteau. In Mr. Cleveland's case the possibility of sudden breakdown from his excessive application must be kept in mind, while if Mr. Blaine is nominated, there is abundant reason for giving special heed to the second place on the ticket.

The circumstances are peculiarly favorable for securing proper attention to this matter among the Democrats. The certainty of Mr. Cleveland's renomination enables the delegates to devote to the Vice-Presidency the attention which is usually monopolized by the contest over the Presidency. High-mindedness in the choice, and patriotism in the acceptance, will be one of the most valuable political lessons yet given to the country by any party, and a veritable landmark in our emergence from the toils of party.

THE MUTATIONS OF THE INTERNATIONAL COPYRIGHT BILL.

We lately traced the evolution of the "Chace" Copyright Bill to the time of its favorable report to the Senate, by the Committee on Patents, on March 19. It was taken up for consideration by the Senate on Monday, April 23, and the amended text suggested by the Committee was accepted. Two additional alterations were proposed by Senator Chace: (1) to reinsert the word "chromo" (which had inadvertently been omitted) in the paragraph of the bill amending section 4956 of the Revised Statutes; and (2) to amend the bill so as to confine the stipulation, "printed from type set within the limits of the United States," to books and dramatic compositions, and to provide that in the case of "engraved works, photographs, or similar articles, two copies of the same" shall be deposited. Both amendments were agreed to by the Senate, whereupon the Senator, after a lengthy speech, desired to press the bill to a vote. But further changes were promptly proposed by Senators Morrill and Vance. The former, in behalf of the publishers of *Littell's Living Age* and the *Eclectic Magazine*, submitted the following proviso:

"That publishers of newspapers or other periodicals in the United States shall be allowed to copy in those publications any articles which may appear in the newspapers or other periodicals of any foreign country, and for that purpose, and not for sale, shall be allowed to import such newspapers and other periodicals."

This amendment was opposed by Mr. Chace, who, on April 30, announced that he was authorized to withdraw it and substitute another, to the effect "that any publisher of a newspaper or magazine may without such consent [*i. e.*, of the proprietors of periodicals copyrighted in this country] import for his own use, but not for sale, not more than two copies of any newspaper or magazine published in a foreign country;" which substitute was accepted. Senator Vance's proposal was to exclude "newspapers, magazines, and periodicals" from obtaining copyright at all. This exclusion would have applied to American as well as to foreign journals; and, although the proposition was voted down, it must have startled American magazine proprietors to learn how gravely their property was jeopardied; no less than seventeen Senators putting themselves upon record as favoring a legislative enactment which, if carried into effect, would have rendered impossible the continued existence of the leading periodicals now published in the United States.

The "protection" features of the bill offered tempting opportunity for attack to the free-trade party in the Senate, and Senators Call, Vest, and Jones of Arkansas made vigorous protests against the requirement of total manufacture in the United States, and the prohibition of importation. Mr. Vest moved to strike out the words "from type set," leaving the manufacturing clause to read: "printed within the limits of the United States," but, upon being put to a vote, this amendment was rejected. On April 30 Mr. Jones proposed that the entire non-importation clause be omitted, and the vote was taken, but, as no quorum voted, this amendment came up again on May 9, when, less than a quorum again voting, although a call of the Senate indicated that the requisite number of Senators were present, it was withdrawn. On the last day of the discussion upon the bill, Senator Teller asked to have a section added limiting the term of the act to five years, which was not agreed to. No further amendments being proposed, a vote was taken upon the bill as a whole, and it was passed by 34 yeas to 10 nays, 32 Senators not voting.

The important provisions of the act, as passed by the Senate, may be briefly stated to consist of such amendment of the copyright law of the United States as will extend the protection therein guaranteed to literary and artistic property to all such property, without regard to the nationality of its creator or owner, provided certain stipulations are complied with. These are (1) that a printed title of the book or other article, or a description of a work of art, shall be recorded before publication; and (2) that two copies of a literary or artistic publication, or one copy of a photograph of a work of art, shall be deposited. After copyright has thus been secured, it is enacted that, during the term of its existence, the importation into the United States of any book or other article so copyrighted is prohibited, except that not more than two copies at any one time may be imported, provided written consent thereto has been obtained from the proprietor of the copyright, signed in the presence of two witnesses. In order to prevent other importation than is thus allowed, it is made the duty of the officer of record (the Librarian of Congress) to prepare "lists of copyrighted articles," which the Secretary of the Treasury is ordered to print weekly, and distribute to collectors of customs and postmasters, who are instructed to seize and destroy all copies of "such prohibited articles," whenever any attempt is made to bring them into the United States.

But the Librarian of Congress is simply a ministerial officer, not vested with any judicial authority, and he is obliged to record claims of copyright without regard to their legal value. In practice, therefore, many titles are entered, and copies deposited, of works which cannot secure legal protection under our copyright laws. It is reasonable to suppose that this practice will increase under the new act, especially in regard to foreign books. To illustrate: A German publisher will send, as directed in the act, a title-page and two copies of a foreign book which bears a claim of copyright. If accompanied by the proper fee, the title is recorded, and the copies of the book are deposited in the Library of Congress. Or the title-page of one of Walter Scott's novels is sent for record, and copies of the book, printed in the United States, are deposited. In both cases (as this act gives the Librarian of Congress no discretion) the titles of the volumes will be entered in the lists prepared for the use of customs officers and postmasters, whereupon foreign editions of these books at once become "prohibited articles," according to the phraseology of the act. The question then arises, what guarantee has the innocent purchaser who sends to Germany or England for either of these works that his book will not be seized and destroyed at the first American custom-house or post-office?—although in the first case the copyright claimed could not be sustained in our courts because the book was not manufactured in this country, as required by the act; and in the second case there is no legal copyright because the author's works have long since become public property.

As regards the deposit of copies, section 2 of the act requires that such deposit shall take place "not later than the day of the publication thereof in this or any foreign country," this being an alteration of section 4956 of the Revised Statutes, wherein the delivery of the copies is required to be made "within ten days from publication." But section 4959, which also contains a provision that "two complete printed copies of the best edition issued" of a book are to be deposited "within ten days after its publication," is neither repealed nor amended, though it is difficult to see how the two sections are to be made to harmonize. It is distinctly required, as regards a book or dramatic composition, that the copies deposited shall be "printed from type set within the limits of the United States," but no stipulation of this nature is made concerning the copies to be deposited in the case of "engraved works, photographs, or other similar articles," which articles may, therefore, be of foreign manufacture and yet obtain copyright. Are such engravings in that case to be imported only in lots of two copies, each importation accompanied by a written permit from the proprietor authenticated by witnesses? It is left to conjecture whether a musical composition is, or is not, to be considered as a "book," no mention being made in the act of this kind of literature; and while maps and charts may easily be considered as embraced in the designation "engraved works," no provision is discoverable concerning the deposit of copies of chromos. Our pre-

sent statutes relating to copyrights are very inadequate and by no means free from perplexities of interpretation; and it is to be regretted, therefore, that the provisions of the Senate act are such that their interpolation into the old law will increase rather than diminish the difficulties of construction.

CATHOLICISM IN IRELAND.

DUBLIN, May 5, 1888.

THE National ranks in Ireland have sustained a heavy loss in the death, at the comparatively early age of forty-two, of Edmund Dwyer Gray, editor of the *Freeman's Journal*. His father, Doctor, afterwards Sir John Gray, one of O'Connell's many Protestant lieutenants, purchased the paper before daily journals had become the serious undertakings they now are. After the disruption of the Repeal and Forty-eight agitations, Dr. Gray settled down to make the best of a bad business, virtually abandoning the National, but throwing himself vigorously into all subsidiary Irish questions, such as Land Reform, Education, and Church Disestablishment. For years, as the leading combatant of his time, he was perhaps the man best hated by the ascendency party in Ireland, peculiarly hateful as being a Presbyterian and of Presbyterian family, while editor of the chief Catholic paper. He was a man of uncommon and statesmanlike ability, and, if Ireland had had a government of her own, would still more have made his mark. He left an imperishable monument of his capacity and resolution in the splendid Vartry water supply of this city, a project which he successfully carried through against the strongest opposition of the respectable classes, which, since the corporation became really representative of the people, have resented and withstood all extension of its powers. For this achievement Dr. Gray was knighted by a liberal Lord-Lieutenant, the Earl of Carlisle.

Edmund Dwyer Gray had, perhaps, greater and wider capacity than his father. He was clear-sighted and practical. If once he came within the power of the law, it was not that he transgressed any act of Parliament, but that an irascible judge, at a time when party feeling was strung to the highest pitch, took an opportunity of paying off old scores with the *Freeman*, and committed him to several months' imprisonment for contempt of court. To the present movement the *Freeman* accorded but a tardy support. Before the position of Mr. Parnell was assured, Mr. Gray occasionally publicly differed from him; he "tried one fall" with the rising leader, and then became his follower, modifying and moulding the policy of the party as far as possible, in public and in private. Socially, Mr. Gray was charming; he kept open house and helped to elevate and extend national feeling by his hospitalities.

One misfortune of the chasm between Protestant and Catholic here is, that those Protestants who sympathize with and join the National party to any considerable degree, insensibly become more at home among Catholics than among their own coreligionists. It was therefore not unnatural that Mr. Gray should marry a Catholic lady. She was a daughter of Caroline Chisholm, so well known in the early fifties for her philanthropic work in connection with female emigration to Australia. Mrs. Gray is a woman who would adorn any faith. Before long Mr. Gray himself openly joined the Catholic Church, thereby removing the anomaly of the leading Catholic paper of one of the most strongly Catholic countries in the world being edited by a Protestant. Mr. Biggar, Mr. Parnell's principal coadjutor, like Mr. Gray brought up a Presbyterian, went over to Rome about the same time. Of the public men I have known, both would have appeared about the least likely to make this change. Yet the one is, I believe, a sincere son of the Church, the other died in the odor of sanctity. Still I cannot believe that in either case the change was doctrinal: I think it was more national and emotional. Seeing the hateful guise which Irish Protestantism assumes, generally opposing every broad reform tending towards freedom and enlightenment here, the change was, however, natural. I have known many such conversions, but, in looking back, can recollect only two Catholics who have become Protestants. I lately asked an elderly Episcopal clergyman how many such cases he had known; he could think of only one, which proved to be one of the two that I had recalled.

The reason of the strength and attractiveness, so to speak, of Catholicism in Ireland is not far to seek. With you it is intrusive. Ireland is its natural home. Here Protestantism has been intrusive, and not even through free immigration, but by confiscation and at the point of the sword. Your ancestors, at least in New England, crossed the Atlantic expecting to found states upon the sure basis of what was best in Protestantism. There must be something peculiarly exasperating in these anticipations being jeopardized by a mainly ignorant and impoverished foreign immigration. Catholicism has all along been the central undeniable fact in Ireland, to be dealt with as we would, but to be fully accepted. Those who dream of the conversion of the Irish to Protestantism entertain a chimera born of the reports and wishes of those who live by keeping up the delusion. Catholicism, here as elsewhere, will, of course, change in time, as all religious thought changes; but I believe it will never consciously become Protestant. All we can hope for in the elevation of Ireland must come theoretically in alliance with it.

The more increasingly I prize Protestant freedom, and feel the impossibility of my becoming a Catholic, the more I respect and would avoid all appearance of, or actual, interference with Irish Catholicism. It is everything fairest, best, and truest to the Irish people. It is bound up with their ideas of home, nationality, and common suffering. For an Irish Catholic to turn Protestant is like abjuring the better part of his nature, and condoning a system inimical to his race. We are apt to consider Catholicism in its purely ecclesiastical aspect. If we look into Catholic religious shops—at the gaudy plaster statues, the beads, and rosaries, and crucifixes, and other paraphernalia of religion, at the to us sickly or awful publications, such as Father Furness's 'Hell Opened to Christians,' if we turn over the leaves of a strictly Catholic periodical and dip into its to us unreal world of martyrs, saintly ecclesiastics, and immaculate communities, illustrated in a language of unreasoning adulation and complete subjection of the critical faculties—if we dwell upon these alone as Catholicism, we are likely to feel that there is no hope for the people who cling to such supports and modes of thought. But they are no more representative of Catholicism in Ireland than the Salvation Army *War-Cry* is a fair exemplar of Protestantism in its broadest sense. To know what Irish Catholicism really is, we must know the hearts and minds of the Irish people; and the more we do so the more we perceive its strength and to them sustaining force and beauty under all the trials and perplexities of life, and amid all the peculiar trials and perplexities of Irish agitation. We Protestants may wish things otherwise; we may and do consider this an enervating support, whose principles, if adhered to, can never build up men and nations as can Protestantism. But such as it is to them, we are bound to respect it.

The priesthood here could not maintain their influence if their characters were not in the main high. There is scarcely any form of human suffering that is not minimized by the charities conducted by the Catholic religious communities over the length and breadth of the land. They educate the young, raise the fallen, minister to the sick, poor, and insane, tend those afflicted with incurable maladies. The working of these institutions always impresses me with the single-minded and practical devotion with which they are conducted. This applies also to private life. What I see of "spiritual advisers" and parochial clergy convinces me how entirely merited, especially in the cases of unprotected girls in town situations, is the confidence placed in them. In our Protestantism we have nothing to correspond to the help afforded, particularly to the isolated, by constant access to advisers and consolers, to whom every thought may be confided, and whose counsel on any juncture may be sought with the absolute certainty of secrecy.

I know of no other reformatory work so completely and efficiently done as that by the religious orders. I cannot say what results the military precision with which they carry on their labors may have upon the after lives of those they benefit, as compared with the effects of Protestant methods. The extent to which the orders absorb the philanthropic energy of society seems to me to narrow ordinary life. The deep and abiding interest in wide philanthropic efforts imparted to the hearts and daily lives of so many Protestant families cannot be felt where such work is delegated mainly to orders in conventual or other institutions. For the most part, the highest and most spiritual natures among Irish Catholics devote themselves to a celibate life. It was Miss Cobbe, I think, who first pointed out the possible deteriorating effect this may have upon future generations. Interest in world-wide philanthropy, outside the limit of churches, appears to exist in inverse ratio to the power of the churches. Here in Ireland it is greatest among the dissenters, who number some tenth of the population, less among the Episcopalians, who form twelve per cent., least of all among Catholics, who constitute the majority. I can call to mind the names of only two Irish Catholics that took any effective part in the anti-slavery movement. The greater the religious organization, the more the sustainment of its prestige becomes the aim and object of its votaries. A Catholic clergyman who held a cure in the outskirts of Dublin, told me that he was stopped by his superiors in active temperance work because he gave offence to the liquor-sellers in his district, who were the most munificent supporters of local Catholic charities.

In business dealings and with workmen, no difference regarding honesty and reliability is to be remarked between Catholics and Protestants of equal education and opportunities. But Catholic workmen do not seem to me so desirous to rise as Protestants. It is painful the extent to which men in the higher positions, even with Nationalist employers, have to be brought from the north of Ireland or from Great Britain. Nor, I think, have Catholics here with equal openings yet proved themselves on the whole as capable as Protestants of inaugurating and conducting business operations on a large scale. But this may be all due

to the disabilities under which Catholics suffered until lately, and to the centuries' start which Protestants got in every relation of life. Easy and delightful social intercourse between Catholics and Protestants of mature age is always possible, but it is more or less prevented where in families there are young people, with the danger of mixed marriages, and their attendant difficulties regarding the religion of children.

Catholicism is to the Irish light, truth, joy, and freedom; but no less so is their national cause, which their Church may, through sympathy, help to sanctify and guide, but which even it cannot repress. The papal pronunciamiento is now the absorbing subject of interest here. I thought I should the better avoid too hasty conclusions regarding its probable effects, and the better prepare your readers for its consideration, by devoting a letter to Irish Catholicism, to which subject a few remarks on Mr. Gray's life, character, and conversion would naturally lead. D. B.

THE GERMANIZATION OF ALSACE-LORRAINE.

STRASSBURG, May 3, 1888.

FOR the first time in the history of the Imperial Reichstag, an Alsatian delegate, Dr. Petri of Strassburg, declared a few weeks ago that the questions relating to Alsace-Lorraine would be always considered and discussed by him from a German national standpoint only. This declaration, coming as it did from a delegate popular in the annexed territory, was most warmly received by the Government, and has been hailed by the German press as the dawn of a new era for Alsace-Lorraine. Whether a new era is really dawning, it is, perhaps, too soon to say, but the last year has at least been marked by a change in the Government policy towards the Reichsland, and serves to illustrate the political feeling in the provinces and the progress made in the efforts to Germanize them.

In face of the general election of February, 1887, following upon the dissolution of the Reichstag after the rejection of the Army Bill, Prince Hohenlohe, who succeeded the late Gen. Manteuffel in 1884 as Stadthalter of Strassburg, issued a proclamation calling upon all loyal Alsatians to show their patriotism by supporting candidates favorable to the bill. It was, perhaps, not a discreet thing to do, for his answer was an overwhelming defeat of the Government candidates, and the Protest party, at whose head stood Kablé, the Strassburg delegate, seemed stronger than ever. The death of Kablé, however, made a bye-election necessary in July. The hasty candidature of Von Moltke was unsuccessful, and the seat was won by Dr. Petri, who, though a personal friend of Kablé, was not a member of the Protest party, and whose platform was an acceptance of the situation as it is. But the result of the bye-election was for the most part unheeded in Germany, compared with the surprise and disappointment called forth by the general election which preceded it. Something seemed to be wrong with the policy hitherto pursued towards the provinces, and there were outspoken criticisms in the press of the attitude taken by Manteuffel. This blunt soldier had once declared: "I do not ask for any sympathy from the Alsatians; all I want is obedience." Nevertheless, he used every effort to cultivate friendly relations, and carried this so far that in cases of legal disputes between Alsatians and new-comers it was said that the former had the Stadthalter's influence in their favor, whether their cause were right or wrong. In spite of Manteuffel's apparent personal popularity, the German Empire seemed as little popular as ever. During the first years of Prince Hohenlohe's administration everything was much as it had been before. But, following closely upon the discussion of the Army Bill in the Reichstag, affairs in Alsace-Lorraine took a new turn. Stricter measures were enforced, a large number of arrests for treason were made, and it became apparent that the Government expected to try a policy of greater severity. The cases of high treason tried at Leipzig last summer revealed the fact that the disaffection in Alsace was greater than had been imagined, and German public opinion was loud in its approval of rigorous repressive measures.

The Strassburg University came in for a share of the blame. There were complaints that it had failed to perform the task for which it was founded, namely, not only to furnish the means of higher education to Alsace-Lorraine, but also, as an imperial university equipped at enormous expense by the Government, and aided by an annual subsidy of 400,000 marks, to build a centre for national ideas, political as well as academical, in the southwest borders of the empire. These expectations have not yet been fulfilled in the measure anticipated, certainly through no fault of the University, but simply because too much was demanded of it. The rector of 1887 said in a public discourse to the students: "It is our task now to conquer with German ideas this land that we have already conquered with the sword." It was a frank statement of the circumstances, and for such a task fifteen years is far too short a time. It was in the Reichstag debate over the annual appropriation for the University that Dr. Petri made the noteworthy declaration above quoted.

If the past year has seen a change of feeling on the part of old Germany towards the Reichsland, it has also been a year of excitement among the Alsatians themselves. The numerous arrests have made people nervous. New regulations, none of them singly of much importance, have irritated the shopkeepers. During the last winter, for instance, it became necessary for the first time that the quality and price of goods exposed for sale should be designated in marks instead of francs. Dating from February, all new business signs in Strassburg must be in German, though the old French ones may be retained as long as they last. There is no real hardship in this; it is simply an attack upon a certain sentiment. There is no reason why a firm that has called itself for a generation "Müller, Père et Fils" should not call itself "Müller, Vater und Sohn," especially as the Müllers, let us say, very probably speak German, of the Alsatian type, in their family; but it is exactly in little things of this sort that people like to be let alone. The Government is proceeding calmly to enforce its regulations, with the patience and pettiness that are such marked traits of the German character, and with a supreme indifference to local opinion. The German minor official has few friends even among his own countrymen, indeed, not as many as his fidelity ought to bring him, and enough allowance is not made for the exceedingly delicate duties of the officials in a city like Strassburg. The hand of the Government must be everywhere; now limiting the number of hours of instruction in French in a girl's private school, and now breaking up a young men's athletic club because the funds for the development of Alsatian muscle were found to come from the other side of the Vosges. As may be imagined, the young Alsatians who serve in the army are never quartered here, but are usually sent to the eastern frontier of Germany.

The line of division between the "inhabitants" and the "immigrants," to adopt the expressions of the Strassburg *Post*, the leading Government organ of the region, is nowhere to be studied to such advantage as in Strassburg. Metz is a fort in a conquered country, and no one pretends that it is anything else; Mülhausen is in many respects a French manufacturing town; but Strassburg, in spite of the statue of Louis XIV. on the façade of the minster, and the French names of the streets cut into the sandstone of the corner houses, is not a French city, and here is the centre of the characteristic life of the provinces. The physical peculiarities of the Alsatians, and their strongly marked Alemannic dialect, make it impossible to mistake them among the tall men of the north who jostle them on the narrow streets. This difference runs through the whole business and social life of the city. The shops are either "German" or Alsatian; in the latter French is spoken by preference. Alsatian and "German" cafés and beer halls are side by side, and the patrons of one are rarely seen in the other; indeed, the consumption of Munich beer, the favorite beverage of the "immigrant" class, is a test of a man's politics. Of recent years the regular performances in the city theatre have been exclusively in German, but let M. Coquelin come once a year with his Paris company, and everything in the audience is changed—faces, fashions, and tastes. The two elements of the population avoid each other by mutual consent, when this is possible. The growth in social weight of the "immigrant" class tends to give these people a society of their own. Theirs is the new quarter of the city, near the University and the Kaiser's palace; theirs is the consciousness of strength, and theirs is the future.

Recent investigations into the language line of the Reichsland show that though in Lorraine the section where French is the language of the villages runs diagonally across the province, in Alsace, on the other hand, the language line coincides marvellously, except in the extreme south, with the political boundary. The French language as spoken on German soil is ultimately doomed. It must be remembered that it was only after 1840 that real efforts were made to introduce French as the language of the Church and schools in the country districts. Napoleon III. was alive to the political advantages of this effort, and in the decade previous to 1870 the schools were carried on in French to a large extent, though the Church itself was constant in its objections to the religious instruction being given in any other language than the native German. The state of things to-day may be illustrated by the fact that while, shortly after the war, almost every servant-girl coming to Strassburg from the neighboring villages spoke French, having learned it in the village schools, it is now rare to find such a servant with a knowledge of the language, unless there are exceptional circumstances in the case. A few phrases are often picked up for gentility's sake, and it is not at all uncommon to hear "Bon soir" from a servant-girl or a butcher-boy as a cheery morning greeting. In many Alsatian families French is spoken simply because the Government is trying to stamp it out; but a language cannot live long without other nourishment than a spirit of obstinacy.

The real political sentiments of the Alsatians in Strassburg do not often find expression. The people are too wise to talk much, in view of the object-lessons they have been having. There is a large class of irreconcilables, as was of course to be expected. Men who have been

shelled by the Prussians in a siege are not likely to forget it, or to refrain from telling their children about it. Otherwise the fear of arrest keeps them close-mouthed; but these are the men and women who expatriate their sons rather than have them serve in the German Army. The younger generation is more bitter than German politicians once imagined that it would be, though it must be borne in mind that there is an excitement and a sentiment in the cultivation of French sympathies that tend to keep these alive among the younger folk. The majority of the Alsatians, however, seem politically indifferent. If there is in this majority no love for the German Empire, there is equally no love for republican France. The French sentiment in Alsace-Lorraine is, on the whole, rated too high, and nowhere more so than in France itself. The feelings of the Alsatians who emigrated to Nancy or Paris after the war, who have been nursing their wrath to keep it warm, and are prominent in the chauvinistic agitation meetings, must not be taken as representative of all Alsatians now in the Reichsland. What the Alsatians really feel is that they are a distinct people, divided from their neighbors on either side. Dialect, customs, temperament, separate them from their German kinsmen; but in all these respects they are still further away from France. I once asked the nurse of a bright little fellow playing in the public park here if the boy was French or German. She answered, with a puzzled shrug that left no doubt as to her own nationality, "He is—Strassburger." There is the whole political situation in three words.

In the country villages there is a general indifference to politics, just as there might be anywhere else in Germany or France. There are sometimes sharp complaints of the fines imposed by the local police upon the native population for causes that seem to the latter too slight, such as deficient drainage or irregularity in the handling of live stock. It is possible to appeal from these fines, but the wiser villagers do not try it. They grumble among themselves, and the boys are apt to leave for America if they can get away; but, in general, the situation is accepted as inevitable. Most of the peasants do not probably care overmuch what government administers the taxes, provided the taxes do not increase. A year or so ago I talked with an intelligent peasant at Elsasshausen, where the French made their last stand after the battle of Wörth had gone against them. The peasant described how his little barn had been burned by "the Prussians." "But of course you are a good German now," I remarked. "Why not?" was the naïve answer; "they paid me 700 francs damages."

To sum up, one must not imagine that the new era whose advent has been lately announced, arises from any particular change of sentiments in the mass of the people. That mass is slow to move. But it is important to note that there is a group of leading Alsatians who are tired of voting with the Protest party, and who, recognizing that the provinces are irrecoverably united to Germany, have decided to take their political stand accordingly, and to work, in the words of Dr. Petri's platform of last July, "for the welfare of our city, of our province, and of the empire." There may always be students of politics who will doubt the wisdom of Bismarck's annexation of Alsace and Lorraine, but, once annexed, they have been governed with admirable firmness, and with a thoroughness that leaves no doubt of the ultimate issue. Compared with the patience that regulates the studies of a girls' private school and a shopkeeper's sign and a peasant's barnyard, and that can, let it be added, throw a million of the best drilled soldiers in Europe behind the splendid forts of the western frontier, it seems as if the demonstrations of the chauvinists in France, the funereal draping of the statue of Strassburg on the Place de la Concorde at Paris, the songs of Deroulède, and the myth of Boulanger, were but child's play—a play that may, indeed, grow dangerous, but mainly so to the child itself. B. P.

THE PRINCESSE DE LAMBALLE.

PARIS, May 4, 1888.

THE memory of Marie Antoinette will always be associated with the names of Mme. de Lamballe and of Mme. de Polignac, and I have read with interest a volume which M. George Bertin, the editor of the *Revue Retrospective*, has just written on the first of these two favorites of the unfortunate Queen. The Prince de Lamballe was the son of the Duc de Penthièvre, who was called the *bon Duc*, and was universally loved and respected, and of Marie Félicité d'Este. He was married at the age of nineteen to Mlle. de Savoie-Carignan, who was eighteen years old. The marriage was not happy; the young Prince de Lamballe was very dissolute, and his father had hoped to cure him of his many vices by marrying him. Soon after his marriage the Prince de Lamballe became dangerously ill, and he died at Luciennes, near Versailles, at the age of twenty-one.

The Duc de Penthièvre begged the young widow to remain with him, and he became a real father to her. She spent the first part of her widowhood with him at Rambouillet, in company with his daughter, Mlle. de Bourbon. Her sister-in-law was married in 1769 to the Duc de Chartres. In 1770 the Dauphin was married to the Archduchess of Austria, Marie Antoinette, and Mme. de Lamballe, in virtue of her rank, took part in all the festivities of the marriage. The intimacy between her and the young Dauphiness did not, however, begin at once; the Princesse de Lamballe did not often leave the Duc de Penthièvre, who was very fond of her, and to whom she was herself very devoted.

In 1774 the Dauphin became Louis XVI., and Marie Antoinette ascended the throne. She made Mme. de Lamballe one of her companions, and from that moment we see them constantly together. The papers of the time, the 'Journal' of Bachaumont, show them together at the theatre, at the representations of the operas of Gluck, the favorite of the Queen (it was the time of the quarrel of the Gluckists and the Piccinists—as bitter as the present quarrel of the Wagnerians and the anti-Wagnerians). Mme. de Lamballe was one of the chosen friends who were admitted to the Trianon. Marie Antoinette had been educated at Vienna, and, as Dauphiness, the etiquette of the French court had much annoyed her. She had always asked her husband to give her a house where she could live as she pleased. Louis XVI. gave her the Grand and the Petit Trianon; she arranged them both after her own taste. Mercy, the Austrian Ambassador, who kept Maria Theresa informed of all the actions of the young Queen, wrote to her: "The Queen is now occupied with a garden *à l'Anglaise*, which she is making at Trianon; this amusement would be quite innocent if it left any room for serious ideas." Maria Theresa, who was a very severe mother, answers: "I am more and more convinced that I was not mistaken in my estimation of the character, wholly inclined to dissipation, which I have attributed for a long time to my daughter." Mercy speaks of Mme. de Lamballe as the great favorite; he describes her to us thus: "She adds to much sweetness and amiability a most honest character, foreign to intrigue, and without any drawback."

The Duc de Penthièvre presided in 1774 over the States of Brittany, and took with him, on his journey, the Princess, his daughter-in-law. She helped him to smooth many difficulties and to receive the deputations which were sent to him. The Queen, meanwhile, was trying to attach Mme. de Lamballe to herself by some official function; she wished to have her appointed *surintendante*, a post which was much desired by the greatest ladies of the court. This nomination was quite an event. Mercy at times encourages it, and at times he seems uneasy. Marie Antoinette had to triumph over the resistance of the ministers and of the King himself; finally, she writes herself to her mother: "I hope that what my dear mamma will soon learn about Mme. de Lamballe will persuade her that there is nothing to fear from her friendship with my sisters-in-law. She has always had a good reputation, and she has not at all the Italian character. She is established here for life, as well as her brother [the Comte de Villefranche, who had been made by Louis XVI. colonel of a regiment of infantry, and had received from him a pension of 30,000 livres]. I think they feel, both of them, that France is now their country."

Maria Theresa hesitated; she felt instinctively that the French would not like the appointment of a foreigner as *surintendante* of the Queen. This post was of great importance, the *surintendante* being as great a personage as the *camarera mayor* in Spain. She received a salary of 50,000 livres a year, and had besides a great patronage and many material advantages. The great friendship of the Queen and of Mme. de Lamballe excited much jealousy and much comment. "The Queen," writes Bachaumont, "has the greatest affection for the young Princess. It is known that her Majesty often has parties with her at the Petit Trianon, to which she admits no men, and only a few of her ladies. There she allows herself freely all the amiable liberties of her age." The Duc de Chartres and his friends once succeeded in entering this feminine circle, disguising themselves as bears and tigers. A showman introduced them in the garden, and the ferocious animals were soon recognized, and dined with the ladies. The Princess sometimes gave small balls at her own house, which the Queen could attend, and have supper with whomever she liked.

The reign of favorites is short. Mme. de Lamballe soon found a rival in Mme. de Polignac. Her health was bad, she was subject to neuralgia, and was sometimes obliged to leave the court and to go to some watering-place; and sovereigns, as La Bruyère remarks, like assiduity. While Mme. de Lamballe was at Plombières, she was forgotten. The favor of Mme. de Polignac alarmed her, and she tried to destroy her rival, who did not spare her in turn.

When Joseph II., the brother of Marie Antoinette, made his visit to Paris, under the name of Count Falkenstein, he dined once at the Trianon. He told his sister that Mme. de Lamballe had not pleased him. "The Queen," writes Mercy to Maria Theresa, "confessed that she had been mistaken in this favorite, and that she repented having placed her in the post which she occupied." The *surintendante* had soon the mortification of seeing Count Polignac made a duke; her rival had the *tabouret* of a duchess, and became the inseparable com-

panion of the Queen. She continued, however, her service, and we see her mentioned at all the great ceremonies, in all the visits of princes and sovereigns. She was glad to escape from court when she could, and to live with her excellent father-in-law at Eu, at Aumale, at Châteauvillain, at Amboise—the Duc de Penthièvre had many estates, his fortune was immense, and his charity boundless. He was very pious, and liked a retired life; Mme. de Lamballe was happy to forget in his company the difficulties and troubles of the court. Rambouillet was one of the Duc de Penthièvre's houses. Marie Antoinette coveted it, and the King expressed this desire to the Duke. He simply replied: "Your Majesty shall always be obeyed, but will allow me to take away from the place the remains of my ancestors." The coffins were taken out of the vault, and transported from Rambouillet to Dreux; the Duke following the procession all the way on foot. Dreux has ever since remained the burying-place of the Orleans family. Rambouillet became the property of the King, and is now the property of the State.

The States-General opened in May, 1789, and a new life began for Marie Antoinette. Everybody remarked her sad expression on the day of the opening ceremony. She had many enemies; abominable pamphlets had been written and were circulating against her; her most innocent actions had been turned as crimes against her. She was no longer the frivolous young Princess of Trianon, happy to forget for a moment that she was a queen. She was not mistaken in the character of the revolution which was beginning. When the Bastille was taken, Mme. de Lamballe was away, staying with the Duc de Penthièvre. The Comte d'Artois soon afterwards emigrated, the Comtesse d'Artois left for Turin. Mme. de Polignac, who had lived in the intimacy of the Queen, whom she had appointed governess of the children of France in 1782, offered her resignation and abandoned her royal friend.

The news of the events at Versailles on October 5 and 6, and of the forced return of the King and Queen to Paris, reached the Château d'Eu on the 7th of October. Mme. de Lamballe was there with her father-in-law. "O, papa," she said, "what horrible events! I must go at once"; and she left, nor did the old Duke try to prevent her. She took her place near the Queen in the Palace of the Tuileries, and became a witness of the long agony of the monarchy. The King continued his usual life, with an almost incredible calm and serenity. He went out shooting sometimes, and noted the game he had shot, as he had always done; the Queen was more conscious of her danger, and was in great trouble of mind. The diary of Louis XVI. records in the most laconic manner the events of the time. This is its style:

"February 22, Nothing. Hubbub at the Luxembourg.
"February 24, Nothing. Hubbub at the Tuileries.
"February 28, Nothing. Hubbub at Vincennes and at the Tuileries."

This hubbub (*train*), which he noted as nothing, became so loud that he thought of leaving France, in his turn, with his wife and children. The Memoirs of Mme. de Tourzel give us all the details on this project and on the journey to Varennes. We read also in the Memoirs of the Marquis de Clermont-Gallerande: "On the Sunday which preceded the departure of the Queen, Marie Antoinette told Mme. de Lamballe to go for a week to the country, and, taking her hand, said adieu to her with an intonation more tender than usual." Mme. de Lamballe was not informed of the projected flight of the royal family; she went to Aumale as soon as she had heard of it, and, in the hope of joining the Queen, she left, immediately after having embraced the Duc de Penthièvre and her sister-in-law, the Duchess of Orleans, for Boulogne, Dover, Ostend, and Aix-la-Chapelle. When she heard that the royal family had been brought back to Paris, she hesitated for a little while, and suddenly resolved to return to France. She knew well that she was going into the lion's den, for she made her will at Aix-la-Chapelle. Her friends remonstrated in vain. "The Queen desires me," she said; "I must live and die for her." She made the journey in a modest equipage, and when she saw Marie Antoinette again, she was horrified to find that, in a few months, her beautiful hair had turned almost white. When the King and Queen were imprisoned in the Temple, Mme. de Lamballe was not allowed to remain in prison with her mistress; she was sent to another prison, La Force. She was now resigned to everything. One day she was brought before a sham tribunal, and bade to swear hatred to the King, the Queen, and the monarchy. She refused. "I have nothing to answer; to die a little sooner or a little later is indifferent to me. I have made the sacrifice of my life." The President said: "Take her to the Abbaye." This word was the signal of death on that dreadful day of the September massacres. She was taken out, and as soon as she was at the door of La Force she was murdered. Her head was cut off and put on a pike; her body was dragged through the streets by a cord; and the murderers brought their trophies before the windows of the Temple, in the hope that they would be seen by the King and the Queen.

Thus ended this most unfortunate Princess. Facts are, in her case, so eloquent that nothing seems required in her biographer but accuracy and simplicity. M. George Bertin is accurate enough; his book is a compilation of citations and of notes; he has been content to place them in their chronological order, and does not seem to have been preoccupied with the desire to infuse life into his subject, to group his facts around a central figure, or to draw from them any moral lessons.

Correspondence.

THE METHODIST CONFERENCE.

To the Editor of The Nation:

Sir: The action of the members of the Methodist Conference lately held in New York, in excluding women as lay delegates, is an instructive lesson in the way the world at times moves backwards. There were, it seems, some four quiet, inoffensive "sisters of the Church" present, while the "brethren" numbered, counting the yeas and nays cast, four hundred and twenty-two. These four "sisters" seem in no way to have presented their cause, but left the discussion entirely to the overwhelming majority of men present.

It would be well for the ministers occasionally to review the history of Methodism, and to recall the assistance they received from women in the early stages of their organization; and to remember that Methodism itself was a dissent from the government of the few and a belief in the right of all its members to have a voice in church affairs. It had from the beginning a flexible government; it did a wonderful missionary work with volunteer assistance; it laid its foundations deep and strong in the individual right of every member to preach if he wanted to, or, as it was phrased, if he "had a call." Nor can the Church ever refuse to hold the names of Susanna Wesley, Lady Huntingdon, and Barbara Heck by the side of those of John and Charles Wesley and Whitefield.

Susanna Wesley has been called the mother of Methodism. In the absence of her husband, she read, prayed, and exhorted to the many men and women who came to hear her, explaining that she would not have done so had there been a man capable of taking her place. Her example, and afterwards her sympathy with, and ready assent to, this new method, convinced John Wesley of its value, and thus was added the strong corner-stone of lay preaching.

It is very questionable if Methodism would have succeeded, notwithstanding the character of the Wesleys, had it not been for the generosity of Lady Huntingdon. She gave, it is said, $500,000 for the cause of the Church; she sold all her jewels and erected chapels for the poor; gave up her residences and liveried servants, her equipages; purchased halls, theatres, and dilapidated chapels in London. She was, indeed, "their most important centre of union, and directed the whole Calvinistic movement of Methodism." Her call was not to preach, but to work, which she did for forty years with so much spirit, sense, and generosity that her biographers conclude that it was only a question of sex that prevented her ranking as the equal of John Wesley.

It is a matter of historic interest that women have never figured very conspicuously, with some brilliant exceptions, either in state or in ecclesiastical affairs; and for any church, however new or broad, to include the sex as a factor in its body politic one hundred years ago, was an astonishing event. But this the Methodist Church did, following in this, as in everything else, the guidance of John Wesley. "I think the case rests here," he wrote to one of the women exhorters, "in your having an extraordinary call. St. Paul's ordinary rule was, 'I permit not a woman to speak in the congregation.' Yet in extraordinary cases he made a few exceptions; at Corinth, in particular. . . . The difference between us and the Quakers is manifest in this respect: they flatly deny the rule itself, although it stands clear in the Bible; we allow the rule, only we believe it admits of some exceptions."

Every one will remember, to illustrate further, the character of Dinah in 'Adam Bede.' In the conversation between her and Mr. Irwine, he continues:

"'Your Society sanctions women's preaching, then?'
"'It doesn't forbid them, sir, when they've a clear call to the work, and when their ministry is owned by the conversion of sinners and the strengthening of God's people.'"

But afterwards, when Adam is telling Dinah of his meeting with Arthur Donnithorne, he adds:

"'Ay, and we talked a deal about thee. "I shall turn Methodist some day," he said, "when she preaches out of doors, and go to hear her." And I said: "Nay, sir, you can't do that, for Conference has forbid the women preaching, and she's given it all up, all but talking to the people a bit in their houses."'"

Notwithstanding this limitation, however, the Church has developed strong women as well as strong men within its folds. To limit women to still narrower work may be to deprive it, no matter what Conference may think, of a spiritual power hard to replace. If women would regard this as a species of taxation without representation, and *resent* it, and retire from the membership of every church that permits nothing but membership and work, we prophesy that not a year would

roll around before every office and dignity within its borders would be open alike to women as to men. E. B.

KEOKUK, IA., May 19, 1888.

THE POWER OF THE PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: The London *Economist* has an article upon the "American Presidency," of which the substance is in the following sentences:

"The gradual advance in the position of the President to immense power and responsibility has in part escaped the attention of Europe. Every country, even Germany, is now affected by the diplomacy of the United States, and that diplomacy is now in the main guided by the decisions of the President. Nor is his power really less within his own country. Scarcely any man not an autocrat has such direct personal power over his fellow-citizens' fortunes, or can use it with such little responsibility except to his own conscience."

As this seems to be the general idea in Europe, and as its correctness has much to do with judging as to the working of our Government, it is important to consider how far it is well founded. Certainly that was not Gen. Sherman's view when he declined to be a candidate for the Presidency, on the ground that that official has no power, but that "it is Congress which runs this Government." The *Economist* says that the Fisheries Treaty is approved by the President, by the Secretary of State, and the majority of prominent politicians, but that the Senate will postpone the decision till after the election. That seems a very queer illustration of the President's power. It says that the decision of the furious contest over the tariff will be postponed in the same way, as will every measure which greatly interests the people; and "so, we are told, will many large business arrangements, the fate of many railway schemes, of all protected factories, and of much financial business, really hang on the result of the election." Yes, and they will be postponed till the election of 1892, and again to that of 1896. These things show, no doubt, that Congress subordinates everything to party supremacy in the elections, but they do not at all show the power of this or the next President to get any of these questions settled.

"The message on the reduction of the tariff did more for free trade than any single speech from any premier would have done." Did it? That message was most creditable to the President, called forth a wide public response, and tended to identify the Democratic party with tariff reform, and the Republicans with protection, but whether it really affected the details of tariff reform or the action of the committees in the houses, remains to be seen. To those who know the connection of Sir Robert Peel and Mr. Gladstone with the British tariff, such a remark seems astonishing, though the words "single speech" may sufficiently restrict its meaning.

"Even his *obiter dicta* in answer to addresses, remonstrances, or the like, often powerfully affect opinion, and may, on occasion, completely arrest or materially forward enterprises of grave importance." No doubt such utterances raise an immense clatter in the newspapers, and may affect the personal standing of the President with the country, but their weight in the silent and secret deliberations of the committees, or in the action of the houses, is by no means to be measured by the same standard.

Upon our diplomacy depends "a serious question as to Samoa with Germany, the whole question of immigration with the Government of Pekin, the vital question of consular rights with the Sultan of Morocco, and it may next week have to decide whether it shall or shall not produce much financial ruin in Paris, and perhaps help to shake the republic, by its dealing with M. de Lesseps and the Panama Canal." If we consider that by the Constitution the Senate has the entire power of declaring war, and of raising and supporting an army and a navy, and that a two-thirds vote of that body is required before any treaty can be made, the imputation of such importance to the President must excite a smile. A man of the character of Jackson might, indeed, embroil the country in such a way as to render retreat impossible, but with the present promptness of outcry on the part of the press, and the jealousy of Congress in enforcing its control, there is but little danger until the disposition of the country and of Congress is very different from what it is at present. The exposure to Congressional snubbing, not to say impeachment, will be quite sufficient *in terrorem* to any man likely to be elected.

The one great power which the President does possess, and which is the foundation of the European idea as to his position, is that of appointments to and removals from office. But experience has abundantly shown that he does, and must, use that power in complete subservience to his party supporters in Congress. Here, again, he is held to the strictest responsibility to members of Congress, but to little or none as regards the country. So far as civil-service reform has been successful, it tends to deprive the President of the one power which he really has. G. B.

A POLITICAL QUARANTINE.

The steamship *Gaelic* sailed from Yokohama on the 24th of March and reached San Francisco on the 14th of April; there was no sickness of any kind among either crew, saloon passengers, or steerage passengers on the whole voyage. On arriving at San Francisco the saloon passengers were transferred to the steamer *Eastern Oregon* and held there in quarantine.

The steamship *Parthia* sailed from Yokohama three days after the *Gaelic*, came via Vancouver, reaching San Francisco on April 15th; her passengers were also placed in quarantine on the bark *Alden Besse*, although there had been no sickness on her.

The steamship *City of New York* sailed from Yokohama on April 4th, arrived at San Francisco April 22d, having had perfect health on the entire voyage, and her passengers were placed in quarantine.

While the passengers of these three ships were lying in quarantine in San Francisco Harbor, the steamship *Acapulco* arrived in San Francisco, having had smallpox on the voyage, and having put off several cases at a Mexican port. Her saloon passengers were allowed to land; the passengers of the three healthy ships being kept in quarantine.

Immediately on landing, the saloon passengers of the *Gaelic* held an indignation meeting, at which the following resolutions were passed: . . .

Resolved, That the action of the Mayor and Board of Health of the city of San Francisco in thus detaining the saloon passengers of a healthy ship is an outrageous abuse of power, which in no way protects the health of that city, and is apparently liable to be repeated at any time without notice.

Resolved, That we advise all passengers coming from Asia to avoid the port of San Francisco, and in the event of their being obliged to come there, we advise them to be careful about leaving the steamer on which they arrive until they are permitted to land. . . .

SAN FRANCISCO, April 28, 1888.

TO THE EDITOR OF THE NATION:

SIR: Will you do the country the favor to give room to the above in your paper? I am sure it is the duty of all to condemn such tyranny as is practised in San Francisco. It is a disgrace to America that such a thing is possible within our borders. Americans can see in it a mere political measure, and from it form their opinion of that section of our country, and the injustice of its course, when it resorts to such means in order to convince the country at large that Chinese immigration is attended with much inconvenience and danger. So far as sensible men in our own country are concerned, I am sure this is true, and the effect is to destroy all sympathy with our countrymen of the Pacific Slope in their crusade against Chinese immigration. But the damage is widespread and real, so far as foreign travellers are concerned. They go home with a contempt for a country where they may fall victims to a *political* and not a *sanitary* quarantine.

There can be no more doubt that this is a political quarantine than was the pretended one in N. Australia, which was admitted on all hands to be aimed solely at Chinese immigration. In fact, the Board of Health, in turning loose the *Acapulco*, which, according to their own showing, had been without smallpox over half a month less time than was the *Gaelic*, gave as a reason that she had not carried Chinese passengers. Is Chinese smallpox more tenacious and do its effects last longer than smallpox from other ports? But that we were not really a source of fear to the San Franciscans was further seen by the loose and inefficient nature of our quarantine. The cargo and mails were soon scattered over the country. Our soiled linen and that of the ship went ashore for washing. Our friends came alongside and we went down, shook hands with, sat beside, and (at least in the case of our ladies) *kissed* them, they returning ashore and we reentering our prison-house—prisoners with hard labor, *i. e.*, we had to work hard to keep down our angry passions under our treatment.

Again, we saw the Chinese inhumanly treated, in the way they were driven like dumb brutes into their crowded quarters, and we *heard* that those on the old hulk *Shenandoah* had already been there seventy days when we got there; we left them there still. It was said that new victims were sent to her, who, as they took the disease, were shipped to the pest-house, which even San Francisco papers pronounce to be a disgrace to the city. If these reports are true—and I fear they are—this hulk is kept as a sort of breeding-place for disease while present bills are pending in Congress. "A SUFFERER."

RAPIDAN, VA., May 11, 1888.

A PATENT-MEDICINE CANDIDATE.

TO THE EDITOR OF THE NATION:

SIR: We meet daily in the West people who appear sincerely to believe that Mr. Blaine is the greatest of living men—in all likelihood the greatest the world has ever known. They have what we understand you to have termed the Blaine mania. Not one of them can tell you why he is so "possessed" of the Knight. If you controvert his claim, he immediately goes into a fit, shouts, gyrates, sneers at Cleveland, and abuses the Mugwumps. He will discuss other subjects rationally, but will not endure any trifling with his malady. Is not such a state of mind, in people whose attachment does not spring from personal intimacy, induced by the same methods by which so many people who are physically ill are prepossessed in favor of nostrums? Who could have any faith in the staple drugs legitimate physicians prescribe, after reading and believing all that is advertised so abundantly in behalf of the evangelical and alliterative panaceas for all ills? Mr. Blaine has always seemed to me to be got up upon the fashion of the patent-medicine business. The compound is a secret its victims are not permitted to know. The success of the

business is not affected by the merits or demerits of the medicine, but depends entirely upon the extent and energy of the advertising. The minute examination of his character in 1884, they say, was a spurious analysis got up by the Mugwumps. The advertising has been done more extensively and skilfully since 1884. But why have they worked with an old medicine, when the same means would have made some one now unknown as great and more available?

ANTI-NOSTRUM.

KANSAS, May 12, 1888.

FORESIGHT AND HINDSIGHT.

TO THE EDITOR OF THE NATION:

SIR: In connection with the abolition of slavery in Brazil, it is interesting to note the following passage from a speech of Lord Macaulay, delivered in 1845:

"Fully admitting, therefore, as I do, that Brazilian slavery is a horrible evil, I yet must say that if I were called upon to declare whether I think the chances of the African race on the whole better in Brazil or in the United States, I should at once answer that they are better in Brazil. I think it not improbable that in eighty or a hundred years the black population of Brazil may be free and happy. I see no reasonable prospect of such a change in the United States."

Even the greatest of historians may not write history in advance without incurring some danger to his fame for philosophical acumen.

W. H. JOHNSON.

GRANVILLE, O., May 19, 1888.

Notes.

A NEW book of short stories by Miss S. O. Jewett, 'The King of Folly Island, and Other People,' is in the press of Houghton, Mifflin & Co.

T. Y. Crowell & Co. publish directly Tolstoi's 'Power and Liberty,' a sequel to 'Napoleon and the Russian Campaign.'

John Wiley & Sons have in preparation a translation of Rosenbusch's 'Microscopical Physiography of Minerals and Rocks,' by Joseph P. Iddings of the U. S. Geological Survey. The first volume is devoted to minerals.

Thomas Whittaker announces 'Christianity in Daily Conduct.'

Ticknor & Co. issue this week 'Along the Shore,' verse, by Rose Hawthorne Lathrop, and 'Olivia Delaplaine,' by Edgar Fawcett.

Mr. W. J. Linton is seeing through the press in London his 'Masters of Wood-Engraving,' a history of the art, with examples reproduced at the original scale in photographic facsimile, the print-room of the British Museum being drawn upon for fine impressions. There will be two editions, a lesser and a greater, of 500 and 100 copies respectively, sold to subscribers only. The larger will take in Dürer's "Triumphal Car of Maximilian."

Scribner & Welford will soon issue, in F. Hueffer's translation, a limited edition of the correspondence between Wagner and Liszt, of which our readers have already had a taste; also, 'Tropical Africa,' by Prof. Drummond, a book of recent travel. Chas. Scribner's Sons have postponed till the fall the publication of the second volume of Thomas Stevenson's 'Around the World on a Bicycle.' Nearer issues are a 'Manual of Christian Evidences,' by Prof. Geo. P. Fisher; 'The Five Talents of Women,' by the author of 'How to be Happy, Though Married'; and, 'The Residuary Legatee,' by "J. S. of Dale."

J. W. Bouton, 706 Broadway, sends us the illustrated catalogue of the Salon of 1888, containing 4,764 entries, in which it is noticeable that sculpture makes a nearly equal division with painting. Perhaps no other statement could so forcibly contrast the state of art in France and in the United States. In our exhibitions the statuary oftenest serves as a mere adornment of the picture galleries. The designs of the year in the Salon appear, from the memoranda here given with varying degrees of elaborateness and fidelity, to be about on the usual level.

Dr. Philip Schaff contributes to the series of the American Historical Association a paper entitled "Church and State in the United States." The circumstances attending the adoption of the constitutional provisions forbidding religious tests as a qualification for office, and prohibiting any establishment of religion, are narrated in detail, and some light is thrown upon the perplexing question how, in spite of these provisions, Christianity can be recognized as the lawful religion of the land. The line has to be somewhat arbitrarily drawn between preaching and practice in order to avoid the sweeping guarantee of the "free exercise" of religion. The more valuable portion of the paper, however, is not covered by the title, being an account of the existing religious laws of the several European states. There is an appendix containing the opinions in the leading cases in our courts which have involved the definition of religious liberty and the status of Christianity. The paper makes the fourth number of the second volume of the publications of this useful society.

Mr. George Faber Clark's 'History of the Temperance Reform in Massachusetts, 1813–1883,' is an unpretentious work executed in an orderly manner, and fills a gap. Something like this should have formed a chapter of the ill-digested 'One Hundred Years of Temperance,' published in 1886. Massachusetts was well in the front of the temperance movement, with the first State society, the first newspaper devoted wholly to the subject, and probably the first legislative committee appointed to consider the repression of intemperance. In Boston, too, was founded the American Temperance Society. Many other organizations, if not instituted in the State, were adopted, and one cannot resist the conviction that there were far too many of them. Of the majority the tale is one of decline and cessation at a date more or less ascertainable. Divisions rent not a few, particularly on the color-line. There is a chapter on rum-riots, and one on "Deacon Giles's Distillery," with others on presentations and welcomes, on conventions, on temperance newspapers, etc.; and there are a few portraits. The publishers are Clarke & Carruth, Boston.

The second number of American *Notes and Queries* (Philadelphia: William S. Walsh) is an improvement upon the first in external appearance, yet remains a very unattractive example of typography. This has too frequently to be remarked in the launching of such enterprises, though the difference between success and non-success may lie in the attention paid to so fundamental a matter.

Much superior in this respect is the *Bibliographer and Reference List* (Buffalo: Moulton, Wenborne & Co.), of which the first number has appeared. This issue is wholly devoted to the History of English and American Literature. Each title of a work cited is followed by a descriptive note. The "Reference List" embraces magazine articles, etc., and works out of print, though we fail to see why the latter should not have been entered in their regular places. Among these is Brewer's 'Reader's Handbook of Allusions, etc.'; but we miss Wheeler's 'Handbook of Allusions,' E. Edwards's 'Words, Facts, and Phrases,' and Percy Smith's 'Glossary of Terms and Phrases'—all kindred works. For slight errors we will point out "Spoffard" under No. 26, and "Adonias" under No. 70. But on the whole, both as regards fulness, accuracy, and judgment, this enterprise seems to make a good start. The next number will give a list of works on the history and science of elocution and oratory.

Mr. William Blades closes in the *Bookworm* for May his papers on the invention of the art of printing, and sums up with a present disposition to believe Holland the birthplace, while the very existence of Coster is questionable, and Gutenberg's claim as the first master of an art perhaps not his own by discovery is unshaken.

As we have had several inquiries for Mr. Lowell's recent address in this city before the Reform Club, we will mention the reprinting of it (in very small type, to be sure) in the Baltimore *Civil-Service Reformer* for May.

The March Bulletin of the New York State Museum of Natural History, just published, has a report on the "Building Stone in the State of New York," by John C. Smock.

The Rev. W. C. Winslow, 525 Beacon Street, Boston, asks for new and renewed subscriptions to the Egypt Exploration Fund, of which he is the Honorary Treasurer for America. It is desired both to promote the excavations in progress, and to provide for the publication of the next memoir, relating to Bubastis.

The general series of "Old South Leaflets," now put forth by D. C. Heath & Co., Boston, deserves to find a place in every school-house library. The United States Constitution, Articles of Confederation, Declaration of Independence, Ordinance of 1787, Washington's Farewell Address and Inaugurals, Magna Charta, Franklin's Plan of Union (1754), Nos. 1 and 2 of the 'Federalist'—such are some of the contents of the dozen politico-historical tracts thus far in view. They are sold at five cents each, or one hundred for three dollars. Their use as adjuncts to the Reader should not be overlooked.

An exhibition of some of Victor Hugo's manuscripts of his writings, together with drawings, original designs, and wood-carvings, also by his own hand, was opened in Paris on May 5 for the benefit of the fund for the statue of the poet. Among the manuscripts is that of 'Les Travailleurs de la mer,' with illustrations by the author himself. Mention is also made of a fireplace and chimney with panels carved and painted by him, as are also various articles of furniture and adornment. It is said that the complete collection of his illustrations for his own works and all his other drawings will be shown. A few of these have been engraved and published, from time to time, and among them Americans may remember the extremely Hugoish one of John Brown's gibbet, so widely reproduced after the execution.

The vacancy in the French Academy caused by the death of Eugène Labiche in January last has been filled by the election of another dramatic writer, M. Henri Meilhac, so well known as the joint author, with M. Ludovic Halévy, already a member of the Academy, of the librettos to Offenbach's "Belle Hélène," "Grande Duchesse," and "La Périchole," and of the plays of "Frou-frou" and "Tricoche et Cacolet," to mention only a few of the best known from a long list going back as far as 1861. There were only two other candidates for the vacant seat—M. Paul Thureau-Dangin, the historian of the Monarchy of July, and M. André Theuriet, the novelist. On the first ballot the votes were quite evenly divided, but on

the second M. Theuriet lost one vote to M. Thureau-Dangin and six others to M. Meilhac, giving him the seventeen necessary to make a majority of the thirty-three members present. Ever since the great success of his last comedy, "Décoré," produced in January, M. Meilhac's entrance into the Academy at no distant date was assured. This election, which took place at the meeting of the Academy held on April 26, increases the number of new members not yet formally received to four, leaving only one vacancy still to be filled, viz., that caused by the death of M. Désiré Nisard, a little more than a month ago.

M. Édouard Rouveyre, the Parisian publisher, has at last issued the third, and perhaps the richest, of his three illustrated volumes on book-binding—'Les Reliures d'Art à la Bibliothèque Nationale' (New York: F. W. Christern). As in the earlier works of MM. Octave Uzanne and L. Derôme, the plates and the letter-press have little or nothing to do with each other. In the present volume the text is from the learned and lively pen of M. Henri Bouchot, author of the pleasant little treatise recently turned into English as 'The Printed Book.' M. Bouchot in fifty pages sketches the origin and development of the fine art of book-binding in France, devoting the second and longer part of his paper to a characterization of the noble sequence of book-lovers of whom France has reason to be proud from Grolier's time to the dark days of 1793, when the 'Dance of Death' came to be the most fitting book. Then by themselves we have eighty plates in some variety of photogravure, by Aron Frères. These are all chosen from the picked books of the National Library. They are arranged in strict chronological sequence, and serve to give a lover of bindings an excellent bird's-eye view, as it were, of the rise of book-binding in France, from its rude and Teutonic beginnings, through its Italian splendor with Grolier and Mazarin, to its showy emptiness under Louis XVI. A few final pages of text contain the descriptions of the original volumes.

The fourth number of the "Petite Bibliothèque Française," published by the Librairie des Bibliophiles (Paris: Jouaust & Sigaux; New York: Duprat & Co.), has recently appeared. This little collection now contains 'Le Paysan,' by Jean Sigaux; 'Mademoiselle Abeille,' by Ferdinand Fabre; 'Une Dot,' by Ernest Legouvé; 'Dans l'Argonne,' by Jules de Glouvet. In point of mechanical execution this is the most beautiful of the various fifty-centime collections now in course of publication.

Among the latest publications of Hachette & Cie. is a collection of papers by the late Academician and philosopher, Caro, in two volumes, called 'Mélanges et Portraits.' Also, another of the little volumes of the "Histoire de France racontée par les contemporains," which M. B. Zeller edits with such practical and scholarly ability, called 'Henri IV. et Biron.' The preceding one, published about a month ago, was 'Henri IV. et Sully' (Boston: Schoenhof).

The third and final volume of the 'Journal des Goncourt' was published by Charpentier about the end of April.

The number of the *Gazette Anecdotique* for April 15 (Paris: Librairie des Bibliophiles; New York: Duprat & Co.) is full of interesting things: reminiscences of M. Felix Pyat and Eugene Sue; of Jules Sandeau and George Sand; of M. Charles Floquet as war reporter of the *Siècle* with Garibaldi in Italy in 1866; unpublished lines, said to be by Victor Hugo, and an extremely clever little poem dated "Guernesey, 188.," of which it is implied that Hugo is also the author. It is called "Petite Tristesse d'Olympio, poème inrime," and each of its lines, in a very lively measure, ends with one of the words that have no rhyme in French, with an unexpected and burlesquely Hugo-ish solemnity which produces an indescribably comic effect.

As the first of a series of "Monuments de la Géographie des Bibliothèques de Belgique," the Institut National de Géographie of Brussels publishes a reproduction of four maps, constituting a representation of the countries of Europe. They were found in a manuscript edition of Jacobus Angelus's Latin edition of Ptolemy, bearing the date of 1485, preserved in the Royal Library at Brussels. This manuscript contains also the twenty-seven Ptolemaic maps. Charles Ruelens, the editor, thinks the four modern ones are copies of a prototype of those made by Nicolaus Donis or (as sometimes called) Nicolas Hahn, for the edition of Angelus's Ptolemy of 1482, which he revised.

In the Introduction to his 'Histoire des Œuvres de Théophile Gautier,' Charles de Lovenjoul takes occasion to rebuke a recent American writer for alleged neglect to acknowledge duly material taken from a previous work of the French author. He says, "Avant de terminer, nous sera-t-il permis d'exprimer le vœu que M. Edgar Evertson Saltus n'use point de ce livre comme il l'a fait de notre Histoire des Œuvres de H. de Balzac, dont il a tiré la plus grande partie d'un volume intitulé *Balzac*, publié en anglais, à Boston, et sous son seul nom, sans aucune indication de la source à laquelle il avait emprunté presque tous ses renseignements bibliographiques?"

—The increased importance of the literary life as a career in this century is admirably illustrated by an excellent paper in the June *Atlantic*, in which the Parisian variety of it is broadly treated. The two great changes are that literature as a pursuit has become commercial and journalistic, and the consequences are far-reaching. In France, men of letters have filled a place in public and social life much greater than in other countries, and the prospects which literary success opened to young men of ambition and talent in Paris have been an object of envy, especially in the middle of the century, when Villemain said, in a passage here quoted: "Literature is a career which leads to everything, but often on the condition that a man abandons it; it is a pathway rather than a goal." At present it leads to fortune, and one need not abandon it if he wishes only for money. The difference between the time when Victor Hugo sold only two or three thousand copies of a book and De Musset only seven or eight hundred, and these days of great editions with corresponding profits, is one that has profound results both in the character of the popular works and of the men who produce them. The literary profession as a body is to be congratulated for its material prosperity, but it is more doubtful whether literature itself has profited. The literary art remains, and men of talent and taste practise it; they even look down upon and ignore the writers of books which have no merit except that of financial success; but literature does not remain unaffected by the mass of reading-matter which is without art, and by the gauge of pecuniary reward. Success, particularly the gross and palpable success of large royalties, must always attract imitation, and in the crowd of young men of active and versatile talents, but undetermined aims and unconfirmed tastes, it must happen the great proportion will go with the tide. It will hardly be maintained that the present literature of France, developed concurrently with financial and journalistic success, is a great one, or will hold any high rank in history; nor is there any better promise for the future discernible. This interesting paper gives many details, and throws light upon the course of the movement which has made the literary career a money-making one; and what is true of France is also more or less true of other countries. No other article in this number is of special interest, except Mr. Parkman's graphic narrative of the fortunes of the family of La Vérendrye, some members of which were the first white men to see the northern chains of the Rocky Mountains. Their story has been recovered from documents now being printed, of which we have here a foretaste. The poetry is the least excellent of the year, Miss Thomas's verses being hopelessly Emersonian; but we shall hope for less of this poetic ventriloquism.

—No. 30 of the Harvard University Library Bibliographical Contributions is a facsimile of Shelley's "Skylark" from a MS. volume in the College Library. Its interest consists in its fixing beyond doubt the reading "unbodied joy" for *em*bodied joy, and in the few corrections made by Shelley, all of which are great improvements. It seems unlikely that this is a first draft. At the end is an editorial note that gives the contents of the volume, which is a thin quarto of poems of 1819 and 1820, some in Shelley's and others in Mrs. Shelley's script. Unfortunately, the note is not of so much use as such a description should be: one cannot identify the poems from such titles as *Song*, *A Dream*, *England*, etc., which might mean any one of several of Shelley's poems. The first line should have been given in such cases. We are made sure, however, that stanza 17 of part iii of "The Sensitive Plant" should be erased, as in Mrs. Shelley's edition; and it is a happy erasure, the stanza being in Shelley's worst style. The date of this poem, also, is fixed as Pisa, March, 1820. The date of "An Exhortation," Pisa, April, 1820, is also valuable. Mrs. Shelley ascribes it to 1819. These dates seem to mean, however, the time of finishing the poems. Two poems, the "Sonnet to the Republic of Benevento" and "Young Parson Richards," are not known to us, at least by these titles. There is enough indicated in this defective note to make it plain that careful examination may be of considerable value to the text of Shelley on minor points. The collation of "The Indian Serenade" is especially to be desired.

—Another useful work, the result of that patient toil for which the Germans are noted, is offered to the classical world: 'Index Thucydideus, ex Bekkeri editione stereotypa, confectus a M. H. N. von Essen' (Berlin: Weidmann). The author tells us that the book owes its origin to the frequent complaints of his old teacher, F. W. Ullrich, that there was no such work to aid students of Thucydides. What Ullrich wanted, and what Von Essen has given us, is an index simply, not a lexicon, for the double reason that no one man's views as to meanings and constructions will always commend themselves to others, and because Bétant has left an excellent lexicon to Thucydides. The Index does for the historian what Frohwein does for the Homeric verb: it undertakes to give every passage in which a word is found, and gives the exact form of inflected words, and not only so, but we have separate groups of references for ἐπί, ἐπὶ, ἐπ', and ἐφ'; for τε, τέ, τ', and θ'; for βούλονται and βουλονταί. What surprises us is that a classification so minute as to the form under which a word presents

itself should totally ignore any distinctions of construction. Under εἰ, for instance, it could not have involved much additional toil to tabulate the references according to mood and tense. So of ἄν. So, too, we have nothing to show the case by which a preposition is accompanied. As Bekker's edition is the basis of the Index, we have no hint that in three places (4, 46, 3; 6, 13, 1; 6, 18, 6) ἄν is the undoubted reading of the MSS., and has been changed to ἐάν by the editors. (Stahl ἐάν, Classen ἄν in these passages. In his *Adnotatio Critica*, Stahl admits that the change has been made against MS. authority in 6, 13 and 6, 18. By what must be an accident, he omits to state that in 4, 46 only one MS. has ἐάν, though he has a note on that very passage.) In his preface, Von Essen notes as *id quod imprimis dolendum*, the fact that Bétant does not handle the particles. He will the more readily excuse us, therefore, for lamenting the deficiency we have pointed out in his own book. At the same time we feel deeply grateful for what he has done, and we mark his book as indispensable to all students of Thucydides.

—A rival to Volapük is in the field. 'Dr. Esperanto's International Tongue. Preface and Complete Method, edited for Englishmen by J. St. Price' (Warsaw, 1888) is a low-priced brochure capable of affording much entertainment. The opening words of the preface are: "The reader will undoubtedly take with mistrust that opuscule in hand, supposing that I am speaking about an irrealizable utopy"; and an unprejudiced hearing is bespoken. "I will not speak here much about the considerable importance for humanity of one *international*, by every one without any condition accepted *tongue*." Translations avail but little in putting us in possession of "outlandish literature." Socrates long ago pointed out to a sceptic the immense superiority the human tongue has over the tongue of animals, in being able to utter articulate speech. Our author ascribes to it even higher honor. "And yet the tongue is the first motor of civilization; thanks only to it, if we uplifted ourselves so high over animals. The difference of the tongue is a cause of antipathy, nay hatred among folks." The different "attempts made for giving to the public an international tongue . . . amounted or to a new system of signs for a short, self-made understanding, or to a natural simplification of the grammar with a change of the words, existing in the living tongues into arbitrarily fabricated ones." The first attempts were unpractical, "and so vanished away." The second were merely "cabinet essays, which are not realizing direct benefits," and "no wonder, if they made utterly fiasco." The popularity of Volapük is recognized, but is declared to be overestimated, for "you cannot—as of course—reckon the sum of sold exemplaries as equal to the sum of adepts, who learned the tongue." Moreover, "The number of enthusiasts, after having risen to a certain quantum, will stop and the indifferent and cold world shall never agree with the idea of taking pains in order to speak with a few, and so again, this attempt, like others, will vanish away." Dr. Esperanto found three main "difficulties to get through," the second of which was: "To set the adept in direct possibility of making use of his science with people of either nationality, no matter if the new tongue is agreed by the whole world, if it has many adepts or not." "Among the projects, emitted to the public at different times, often under the loud . . . name of an 'universal tone,' no one resolved more than *one* of the above-mentioned problems, and that only *partially*." The simplicity of the new method is likely to be against it, for "the greater part of men are inclined to bestow their consideration upon a thing, the more it is enigmatical, broad, and indigestive."

—The inventor's plan for introducing his tongue is a novel one. "Not feeling satisfied with *internationality*, the tongue is aiming to *universality*." "To count upon the aid of the public, it would be the same as to build a house on a wavering, even fantastical foundament; the largest part of the public does not like to aid any one or anything, but they would have all ready at once." "The learning of the international tongue . . . remunerates completely the little pain that must be taken for it. I could hope so, my tongue will be accepted at once by a mass of people. But I wish rather to be prepared for the baddest, than to have too splendid hopes"—and this determination, we doubt not, is wise. The plan is to get 10,000,000 people "to full out" a printed slip promising to learn this tongue "when the number of promises will reach ten millions." Not to fall in line and learn it, "would be then simply stupidity." "The underwriting of that promise does not request the smallest sacrifice of work, and in case of unsuccess of the enterprise, it does not lay any obligation upon the underwritten." "For every undertaking people *can* collect underwriters, but very few people *will* underwrite." "The refusal would not be neglect, but crime." We would fain hope that this would not be regarded as "an impardonable fault," in view of the following weighty reason for not underwriting: "The refusal could only be explained by the fear of birth-, science-, or money-aristocracy of finding their names on the list beside the names of people of inferior social position." But there can be no forgiveness. "Nothing will excuse in the future before society the persons, whose names will not be found in the list of vote. . . . With 'I did not know' no one will be excused," for editors are requested to give wide circulation to the project. We commend the book to any who are in low spirits and need to be cheered up. We have only given crumbs from the feast they will find.

—The indefatigable collector of Sicilian popular literature, Dr. Giuseppe Pitrè of Palermo, has just published the eighteenth volume of his "Biblioteca delle Tradizioni popolari siciliani" (Palermo: Pedone Lauriel), containing 'Fiabe e Leggende.' The *fiabe* correspond to the German *Märchen*, the *leggende* to our religious stories of saints, etc. After Dr. Pitrè's four volumes of similar tales published in 1875, it would seem as if little was left to collect, but the present volume contains 158 new stories or important variants of those already published. Two interesting classes of stories were insufficiently represented in the older collection, legends and fables. This lack is here fully repaired, and several very good stories given. One relates that during the creation of the world the Lord called Peter to him and told him to go and see what the people were doing. He did so, and said: "Master, they are all weeping." The Lord said: "The world isn't right yet." A few days later the Lord sent Peter again to see if the world was right, and the apostle saw that all were laughing. "It isn't right yet," answered the Lord. The next time he saw some weeping and some laughing. Then the Lord said: "Now the world is right." Another story tells us that when the ass was created and named, it was constantly forgetting its name, and running back to the Lord to be told again. At last the Lord, wearied by its stupidity, gave its ears a sharp pull, and cried out: "Ass! Ass! Ass!" That is why the ass has long ears, and why we pull a person's ears to keep him from forgetting a thing. Dr. Pitrè's great undertaking will be completed by four volumes of 'Usages and Customs,' now in press, and a volume of bibliography of popular tales. The present volume, we notice, is dedicated to an American scholar, Prof. Crane.

—The scientific study of the various religious sects in Russia is of comparatively recent date. During the last reign the scope of literature was first enlarged to the necessary extent, and the prohibition directed against the exposition of all the historical epochs and the various phenomena of the life of the people was removed. Ever since that time the history and the present state of sectarianism have furnished themes for zealous study. Thus have arisen extended essays on the historical development, and the creeds of the dissenters (*raskolniki*), their results in practice, and many separate tracts on special points and peculiarities. None of these, however, offer a broad review either of the history or of the present phenomena of sectarianism. This deficiency is to be supplied by the publication of a book entitled 'Raskol-Sektantctvo' ('Sectarianism of the Dissenters'), by A. S. Pugavin, of which one volume has already appeared. This contains a bibliography of "the old belief" and its ramifications, and is the first of four large parts devoted to "materials for the study of the religious and social movement of the Russian people." The second volume is to furnish a classification and the characteristic traits of all sects and divisions of which the "old belief" proper consists, and which have sprung up on the soil of schism. The third will contain a bibliography of mystical sectarianism (the *Khlisti*—the scourgers—the *Skoptsi*, etc.), the rationalists (the *Dukhobortzi*—wrestlers with the spirit—the *Molokane*, the *Shtunditzi*, etc.); and, lastly, the fourth volume will be devoted to the classification and peculiarities of all the mystico-nationalistic sects (heretics).

—The two modes observed in inflecting the verb in the Maya languages of Southern Mexico and Guatemala have been set forth in a lucid manner by Dr. Edward Seler in his German inaugural dissertation delivered before the Faculty of the Leipzig University (1887). The verb in Maya, as in other agglutinative languages, is a mere noun, and the two methods employed in its inflection differ in this respect, that the pronoun is either prefixed or suffixed to the verbal base. Whenever it is prefixed, that pronoun is a possessive pronoun, and the base is a *nomen actionis;* but when it is suffixed, the pronoun is a personal pronoun, hence the verbal base has to be considered as a *nomen agentis* or *actoris*. Both pronominal sets vary considerably among each other, and so do the prefixed pronouns among themselves and according to the various dialects. Placed before vowels, they often sound differently from what they do when standing before consonants. When a verbal base is used transitively, a possessive pronoun is prefixed to it; when a passive signification is intended for this same base, the personal pronoun will be suffixed to it. Chiefly such bases as exist in the form of radical syllables submit to this rule; but others prefer to assume the formative suffixes *-ax*, *-ix*, or *-tah* in the dialect of Maya proper. The tense function is not expressed by real tense forms as in the Aryan languages, but by particles or combinations of such, and this is frequently observed in other languages of the Pacific Coast. The title of the book of Seler (who is now exploring Southern Mexico) is worded: 'Das Konjugationssystem der Maya-Sprachen' (Berlin: Th. Grimm).

WASHBURNE'S RECOLLECTIONS.

Recollections of a Minister to France, 1869-1877. By E. B. Washburne, LL.D. With illustrations. Charles Scribner's Sons. 2 vols.

THE history of Mr. Washburne's mission in Paris during the Franco-German war forms one of the most honorable and instructive chapters in American diplomacy. Rarely have such demands been made upon an American minister, and rarely have demands of this kind been met with such skill and soundness of judgment. Appointed to what in ordinary times is a somewhat ornamental position, as a recognition of long and honorable service in the exacting business of home politics, Mr. Washburne found himself suddenly plunged into the maddest sort of political vortex, around which all the forces of European statecraft were surging tumultuously. That delicate equilibrium, the maintenance of which is the chief care of Continental diplomacy, was for the moment disturbed by a shock such as comes only once or twice in a century. The post of the American Minister happened to be at the point of collision, and circumstances connected him in a peculiar and almost unprecedented manner with both parties to the conflict.

When Mr. Washburne, after his first year of service in Paris, went off to Carlsbad in July, 1870, for a summer's recreation, everything in the diplomatic horizon was serene. Two weeks later came the news of the French declaration of war, and he was again at his legation. Here he remained for the next ten months. During this time Paris, as the final battle-ground of the war, and as the centre of revolutionary movement, was the theatre of events only paralleled by the great drama of 1789-1815. The actors were changed, the order of the scenes was inverted, but the incidents were largely the same: siege, capitulation, the fall of a Napoleonic empire, revolution, mob government, terror—each followed the other, on a miniature scale, perhaps, but with more breathless rapidity. In this succession of crises, the American Minister, remaining steadily at his post, was, if not an active participant, at least much more than a mere spectator, and his delicate and exacting duties were discharged with extraordinary courage, energy, and discretion.

Mr. Washburne found upon his arrival that the North German Confederation, on the point of withdrawing its embassy from Paris, had asked him to take charge of the interests of its subjects. Similar requests soon followed from Saxony, Hesse, and Saxe-Coburg-Gotha. The necessary authority was given by cable from Washington, the consent of the French Government was sought and obtained, and in less than a week after war had been declared, Mr. Washburne found himself the custodian of the German Embassy and its archives, and, what was much more serious and burdensome, the sole protector of German subjects in France. Of these there were estimated to be 50,000 in Paris alone. The news from the frontier served to inflame the bitter animosity with which they were regarded by the Parisians, and the duties of their guardian proved to be no sinecure. He was to stand between them and the mob on the one hand, and between them and the Government on the other.

The Government early found itself obliged to define its position. Notwithstanding the great importance of the question, there is no fixed principle in international law to govern the treatment of enemies found in the country on the outbreak of war. The ancient rule was, that they might be regarded as prisoners of war and their property confiscated, but the harshness of the rule has led to its gradual disuse. The usual course is to permit the enemy's subjects to reside at large in the country and to engage in their ordinary pursuits, subjecting them only to a surveillance strict enough to prevent them from giving information or assistance to their own state; while those who desire it are allowed to return home within a reasonable time, unless, of course, they belong to the enemy's army. This is the most liberal policy that a belligerent can be expected to pursue. A third course is to require the departure of all subjects of the enemy; but this rule, like the first, being harsh in its operation, is only resorted to in cases of military necessity.

In 1870 the question was therefore to a great extent an open one, and the efforts of Mr. Washburne did much to bring about a humane and enlightened settlement of it. The cause of the friendless Germans was espoused as earnestly and as skilfully as if their advocate had been one of themselves. At the beginning of the war the French Government resolved to adopt the second of the courses described. By the proclamation of July 20, German citizens were left at liberty to continue their residence in France, and were to enjoy the protection of the laws as before the war, so long as their conduct gave no cause of complaint. A question arose, however, as to the departure of those who did not wish to stay. The American Minister was at once overwhelmed with applications for permission to return to Germany, and he promptly urged the claims of the applicants upon the Foreign Office.

The Minister of Foreign Affairs, the Duc de Gramont, refused to grant the permission to males within the age of military service, that is, under forty years. In this decision the Government doubtless exercised its strict legal right. It is admitted that a belligerent may detain subjects of the enemy who actually form a part of his armed forces. Of the 100,000 or more Germans in France, a considerable number—enough, certainly, to add materially to the fighting strength of the German Army—were within the prescribed limits. It was evident that many of these were leaving France to take part in the war. Under the laws of their country they would be required to take part as soon as they found themselves within its borders. As far as increasing the numbers which Germany would bring into the field, and the numbers which France would be compelled to fight, it made no difference whether they were already enlisted or about to be enlisted. As the Duc de Gramont clearly put it in his letter to Mr. Washburne, "No rule of international law obliges a belligerent to allow the departure from his territory of enemy's subjects, who, from the day of their return to their own country, will be enrolled in the ranks to take part in hostilities."

Mr. Washburne's rejoinder to the letter of the Foreign Office was a masterpiece of diplomatic correspondence, a model state paper. He did not deny the absolute legality of the Government's decision; on the contrary, he distinctly conceded it. But with a deferential courtesy that disarmed all criticism, and a simple dignity and grace of expression, he pleaded the alien cause which had been committed to him. The embarrassments of his anomalous position disappear in his firm but polished sentences. He could not win his case, but so strongly were the French authorities impressed by his tone and temper that, from this time on, he never failed to obtain a respectful and friendly hearing, and in all cases where it could possibly be done, his applications were granted. In this way it often fell to him to secure that which no other man in Paris could have accomplished.

As the war went on, and it became evident that the army of invasion would penetrate to the heart of the country, the Government reversed its policy, and, on the 12th of August, adopting the third course of action in place of the second, decided on the expulsion of all the Germans in Paris. In view of the probability of a siege, hardly any other action would seem to have been possible. The measure was based partly on considerations of humanity; but, humanity apart, it was fully justified by the necessities of the situation. The removal began about the middle of August and terminated on the 3d of September, at which latter date the great body of Germans had received passports and been despatched to the frontier. All this was placed in Mr. Washburne's hands. The labor it entailed was enormous. Many of the cases presented required a hurried examination—there was no time for more than this—and arrangements for transportation were to be made with the railway companies. The setting-out of the parties at the railway station was superintended by a representative of the Legation, sometimes by the Minister himself. Untiring and in most cases successful efforts were made to secure the liberation of Germans arrested or detained by the police on suspicion, and the protection of the flag was given to those threatened with lawless violence. Through Mr. Washburne's earnest representations, the order for departure was modified, relieving the process of much unnecessary hardship. By an arrangement with the Government, the Legation was allowed to take entire charge of the removal, its visa on passports even being accepted in place of that of the police authorities; and, upon its application, permits to remain in Paris were granted by the Prefect of Police. The North German Government placed 50,000 thalers at Mr. Washburne's disposal to provide the expenses of removal, and to relieve the wants of the destitute, leaving the details of expenditure to his individual discretion. The apportionment of this fund was not among the least of his burdens and responsibilities. The extent of the work done by the United States Legation may be judged by the fact that by the 3d of September it had prepared, signed, and distributed 30,000 safe-conducts to the departing Germans, and had supplied 8,000 with railway tickets to the frontier, many of whom also received small amounts of money; while of those who remained during the siege, it provided in the closing month over 2,000 with the means of daily subsistence.

The fact that the American Minister occupied a close relation to each of the contending parties, and was equally trusted by both, pointed naturally to him as the most available intermediary, and led him into a direct and exceptional connection with their negotiations. It was an odd freak of destiny by which the veteran Illinois politician thus became a medium between Bismarck and Jules Favre—between the avengers of Jena and the men of the 4th of September. It was an even stranger train of circumstances that made him later the intercessor for the Archbishop of Paris with Raoul Rigault, and the instrument of securing the release of the imprisoned nuns of Picpus. Indeed, one is rather surprised to find that in that singular international episode, the rescue of the Empress Eugénie, which was begun by the Chevalier Nigra, continued by Dr. Evans, and completed by Sir John Burgoyne, the ubiquitous Minister had no part. He was, however, the means of saving the statue of the Prince Imperial from destruction in the Tuileries—a service for which the fugitive Empress sent

him a pretty note of thanks. The extraordinary fact throughout is, that in the successive upheavals of social and political forces that were taking place around him, Mr. Washburne should have continued, as he did, to command the unbounded confidence of all parties alike, so that each vied with the other in asking his services, and in acceding to his requests—Germans and Frenchmen, clericals and communards, Imperialists and Republicans. Pursuing calmly the even tenor of his way, his services to one side, whichever it might be, never cost him the friendship of the other. His legation was besieged alternately by multitudes of Germans whom he was passing to the frontier, and by deputations of Parisians thanking him for his prompt recognition of the Republic. Through him the protests of Count Bismarck in reference to alleged violations of the laws of war were transmitted to the Government of National Defence. During the siege he was the only man who received news from the outside world; and when Versailles and Paris became hostile French camps, the *laissez-passer* of Marshal Macmahon, and that of Rigault, both of which he held, enabled him to circulate freely in the lines of both armies.

Mr. Washburne's labors in behalf of foreign subjects did not lead him to forget the interests of his country or his countrymen. Great numbers of the latter had departed in haste, leaving their apartments, with all that they contained, to his protection. A proposition to quarter the Garde Mobile in the vacant apartments was checked by an order from Gambetta, issued at the instance of the envoy. Later, he induced Jules Favre to suspend the enforcement of a tax upon the dwellings of absentees decreed by the city of Paris. It was next proposed to use the apartments for the inhabitants of the surrounding villages who had taken refuge in Paris, then for those rendered houseless by the bombardment, and finally for the troops again. In obstructing all these attempts, Mr. Washburne's vigorous protests were successful, and the apartments were spared. He even found it necessary, notwithstanding his championship of distressed Germans, to cross swords on one or two occasions with Bismarck, and he stood his ground manfully in defence of his diplomatic rights, against the imperious Chancellor. The principal controversy arose in reference to the passage of diplomatic despatches to and from Paris, past the military lines of the besiegers. It was a serious question, involving the broad principle of the right of a neutral envoy to uninterrupted communication with his Government. At the beginning of the siege, Count Bismarck refused to allow the passage of the despatches of the diplomatic corps, except upon the condition that they should be unsealed. This impossible condition Mr. Washburne, and those of his colleagues who remained in Paris, absolutely refused to accept. Their protest was not successful in inducing Bismarck to recede from his position as to the diplomatic corps generally, but he made an exception in favor of the United States Legation, and thereafter once a week its sealed despatch bags were forwarded to and from London through the lines, under a flag of truce.

So matters remained until January, when, on the strength of certain passages in captured balloon correspondence, the German authorities formed a hasty and unwarrantable assumption that the privilege of communication had been abused in the interest of private parties. Bismarck thereupon addressed to Mr. Washburne a letter of complaint, and even went so far as to suggest that the despatch bags should be sent, not to London, but directly to Washington, and that the return bag of despatches should be sealed at Washington. To this most unjustifiable attack, Mr. Washburne immediately made a spirited reply, repelling warmly the imputation of bad faith, pointing out that most of the letters he had delivered to private persons had come from Bismarck himself, and adding:

"In this connection, permit me to observe that you will find enclosed herewith an envelope, containing certain letters addressed to persons in Paris, and which you sent to me by the last *parlementaire*. I know nothing of these persons, and I know no reason why I should deliver the letters. I therefore have the honor to return them to you."

In reference to the proposition to transfer his correspondence from London to Washington, Mr. Washburne said:

"With a knowledge of the views of my Government on this subject, and its opinion that it has a right to promptly communicate with me as its representative near the Government of France, it is impossible for me to acquiesce in the arrangement which you have done me the honor to recommend. I have concluded, therefore, to send you, by the *parlementaire* which I hope to obtain for Tuesday next, my despatch-bag addressed in the usual way to the United States despatch agent in London. If you should feel constrained to decline sending it forward without an unreasonable delay, I shall thank you to return it to me here by the first *parlementaire*. And, also, if you should feel constrained to retain my bag sent to you from London to Versailles beyond a reasonable time, I shall thank you to return it to London."

The letter produced an immediate disclaimer from Bismarck, and nothing more was heard of the proposition.

Mr. Washburne's narrative of his mission in Paris is marked by the same modesty, dignity, and justness that distinguished him in his public career. Although written somewhat stiffly, it gives a graphic picture from the standpoint of a close observer of the most striking episode in recent European history. It is disappointing only in its characterizations of the extraordinary men who figure on its pages, of whom Mr. Washburne gives rather superficial sketches, lacking in that subtlety and keenness of penetration which might be expected in one whose career had given him a sharp insight into human character. Notwithstanding this defect, the book deserves the high place which it will doubtless take among contemporary memoirs.

A DORSETSHIRE POET.

The Life of William Barnes, Poet and Philologist. By his daughter, Lucy Baxter ("Leader Scott"). Macmillan & Co. 1887.

William Barnes, whose pleasing pastoral poems in the Dorset dialect are not unknown in this country, belongs to a most interesting class of self-made men, who, with exceptional faculties, make themselves marked persons, but yet rise little, if at all, from their original place among the people. Such a one was our Elihu Burritt, whom Barnes recalls by his special aptitude for languages; such are those workingmen of whom we hear from time to time by the report of some Ruskin who has discovered them, who have a native taste for botany or geology, or it may be poetry. They are distinguished rather in their class than among the intellectual group with which, had they been more fortunately born and placed, they would have been naturally associated. Barnes was an unusual example of the type. He met with more success, and actually rose in social station; but he had the stamp of his country origin strongly impressed on him, and he never ceased to be thoroughly a man of the people from whom he sprang. He is of interest, also, as an excellent specimen of the sort of "original" which we appropriate too exclusively to our own nation; he possessed the versatility, the knack, the tool-using faculty, and the mental curiosity that we associate with the Yankee character, and his biography has the double worth of a life active in mind and in work.

Curiously enough, we are not told in this volume when Barnes was born, but from the chapter-heading it must have been in 1801. He came of farmer stock in Dorset, but in his babyhood he had not the physical vigor and frame that ought to be the birthright of one destined to be a farm-hand. It is related that some wise old woman comforted his mother with the remark, "Never you mind what he looks like, he'll get his living by learning-books and such like." He had some schooling, and was early put at a clerk's desk in solicitors' offices, where his good penmanship saved him from holding a plough, and, as he spent his leisure in acquiring knowledge from books, he early set up a school, and throve so well that he married in 1827 and took a larger house for himself and his pupils. He had the success he deserved, and, eight years later, finally settled in Dorchester, with which place his name and labors were closely associated during his active years. He had already shown the variety of his tastes by engraving wood-blocks, not with much talent, but for publication, nevertheless, and he had written verses in the newspapers. He made himself acquainted with many languages — Welsh and Hindustanee among the rest—and had begun his philological studies. Being discontented with the text-books used in his school, he wrote an arithmetic, a geography, and a grammar for the use of his pupils, upon what he thought better principles. He became a principal founder of the Dorset Museum, and took his boys out on scientific walks as a part of their education, and also to get specimens in the newly opened railway cuttings. He was an antiquarian, too, and took a leading part in the Society which examined and speculated about British and Roman remains; and, to mention a few other of his multifarious employments, he painted doors "artistically," as well as drew in water-color, made boxes, invented a pair of swimming-shoes which would not work, turned his own chessmen on a lathe, produced a quadrant and an instrument to describe ellipses, and played the flute, violin, and piano. He had the fixed habit of bringing his notions to practical forms, and we find him regulating the binding of his books and the margin and frames of his water-colors by "harmonic proportions"; and, to give one capital instance which does as well as any to put this aspect of his character before us, he adopted the theory that Nature never makes mistakes in colors, and that her juxtapositions must be the true harmonies, acting on which, he studied mosses, leaves, and fruits, and used the tints as arranged in them in his own sketching and decoration. Thus, on purchasing two old high-backed chairs, he chose for their covering "a certain gray-green damask, with a yellow-brown binding, the tints found on the upper and under side of a beautiful lichen."

He had determined in the midst of all this on entering the church; and in 1837 put himself down on the books of St. John's College, Cambridge, as a ten years' man. At the end of that time, having meanwhile been a prolific author in the magazines and in books, he received a small cure of £13 value, three miles from his school, and held it for five years, walking out and back every Sunday. His life went on in this way with teaching and preaching, philology, antiquities, lectures in the country, a diary in all languages, and poems in dialect, which

had always been popular in the district and slowly attracted the attention of literary men at London. But hard times came to him, his wife was dead (in his polyglot journal he wrote her name at the end of each day's entry for forty years afterwards), his school declined, and it was a matter of rejoicing when Palmerston put him on the civil list with £70 pension. At last, when his friend Colonel Damer gave him the living at Came in 1862, he found a home for his old age, and congenial employment until his death in 1886. As a rector he was much beloved, and went in and out among his people like one of them. His daughter tells of a woman saying to her, "There, miss, we do all of us love the passon, that we do; he be so *plain*. Why, bless you, I don't no more mind telling o' un all my little pains and troubles than if he was my grandmother. I don't mean any disrespec', miss;" and this story tells its own tale. He remained vigorous until near the end, and died in advanced age with the honor of the people among whom he lived and the respect of those in the larger world who knew his acquirements and talents.

But the biography was written because he was a poet. The name philologist is also upon the title-page; his philological work, however, was cumbrous, and had in it elements of crankiness. It consisted of numberless writings, some of which brought him £5 for the copyright, and some of which have never found a publisher at all. The *opera majora* in these are a 'Universal Grammar of all Languages,' an attempt at a rational formal analysis of speech which shall be true of each particular tongue or dialect; and secondly, 'Tiw,' an analytical scheme of roots and stems. He had also much at heart the reform of the English by eliminating all except Teutonic elements, and restoring to it such purity as the Welsh possesses; his practice of using in his later books only pure Teutonic words, numbers of which he was of course obliged to coin, with his habit of using figure-symbols, made them unreadable. Such are the traits of his philology. But his feeling for the plain and expressive quality, the homeliness, of country speech, to which his philological dreams were allied, is at the root of his extraordinary success as a poet in dialect. At the importunity of friends he translated some of these Dorset idyls into ordinary English speech, and the volume had little success—quite rightly, for the charm was gone. In his English verses he did not exceed commonplace. His poetic inspiration refused to flow except from the living rock of the speech of the country folk which had been familiar to his childhood. There is in all real dialect verse a certain correspondence of the feeling and the words, a fitness as inexplicable as that of a peasant's costume to his body, an adjustment of thought and burring inflections as perfect as is made in all things by use and wont; and this is the main element of their delight to the cultivated. All art reaches after harmony, but here is a harmony that seems before art, and comes to us like unbreathed-on nature. The peculiar forms are easily caught and understood, and they give the tang of life to the country manners which they are used to describe, to the simple sentiment and direct emotion which they convey.

Barnes had poetic feeling of the primitive kind, and so long as he dealt with this Dorset life that was interesting and dear to him, and used its own century-moulded vital speech, he wrote verses with a quality like the charm of a pastoral picture or the sight of the cows in the pool staring at you. These poems won him the attention of some London folk—Mrs. Norton among them, and a Mr. Tennant, whose letters to him are most pleasant in tact and temper; and after a while Patmore and Allingham became his friends, and Tennyson exchanged visits with him. It is said here that the "Northern Farmer" was written under the stimulus of this incident. Palgrave praised Barnes very highly. "This aged poet seems to me to stand second only to Tennyson in the last half century. He has a truth united always to beauty in his drawing of character and country ways—a pure love of nature, such as one sees in the best Greek or Roman writers, exalted and rendered more tender by his devout Christian spirit. I know not, also, if any of our poets have surpassed him in the number of original pictures or motives which his three precious volumes display." There is something of the over-exquisite critic in this, but it should be said that Palgrave has since explained that, in placing Barnes "second only to Tennyson," he meant to class him "with, not above," our other poets "in the foremost line of those after Tennyson." Still, his remarks indicate well enough the lines of Barnes's excellence. The Bishop praised rather the influence of his life and words in his community: "He has helped the people hereabouts to feel what they can be and do." To write verses to please Mr. Palgrave's nice taste, and to have been helpful by them to the humble people of Dorset, is to cover a wide reach of life, one thinks; it is a test of the singleness and simplicity of poetic art.

With one more striking glimpse of the old poet, we have done. He was always eccentric, it seems, in dress. The poncho, the plaid, the flowing cassock, and silver buckles served in turn, but he was especially fond of a red cap, and perhaps it was a favorite color in other articles; at least it flashes out finely in this sketch of him by Mr. Gosse in a letter to Patmore:

"Hardy and I went on Monday last to Came Rectory, where he lies bedridden. It is curious that he is dying as picturesquely as he lived. We found him in bed in his study, his face turned to the window, where the light came streaming in through flowering plants, his brown books on all sides of him save one, the wall behind him hung with old green tapestry. He had a scarlet bedgown on, a kind of soft biretta of red wool on his head, from which his long white hair escaped on to the pillow; his gray beard grown very long upon his breast; his complexion, which you recollect as richly bronzed, has become blanched by keeping indoors, and is now waxily white where it is not waxily pink; the blue eyes half shut, restless under languid lids. I wish I could paint for you the strange effect of this old, old man, lying in cardinal scarlet in his white bed, the only bright spot in the gloom of all these books."

BOOKS ABOUT THE STAGE.

A Memoir of the Professional Life of Thomas Abthorpe Cooper. By Joseph Norton Ireland. The Dunlap Society.

Their Majesties' Servants: Annals of the English Stage from Thomas Betterton to Edmund Kean. By Dr. Doran, F.S.A. Edited and revised by Robert W. Lowe. J. W. Bouton.

La Comédie-Française pendant les deux Sièges (1870–1871). Par Édouard Thierry. Paris: Tresse & Stock; New York: F. W. Christern.

La Tournée du Père Thomas. Par Pierre Giffard. Paris: Tresse & Stock; New York: F. W. Christern.

Adélaïde Ristori: Études et Souvenirs. Paris: Ollendorff; New York: F. W. Christern.

Adelaide Ristori: Studies and Memoirs. An Autobiography. [Famous Women Series.] Boston: Roberts Bros.

We have waited long for a minute biography of Cooper, the foremost figure of the American stage for the quarter of a century before Forrest came to the front; but it is not to be denied that this sketch of his professional career was well worth waiting for. All those who are interested in the American theatre owe a heavy debt of gratitude to Mr. Ireland for his invaluable 'Records of the New York Stage,' which was suggested, no doubt, by Geneste's 'History of the Drama and Stage in England from 1660 to 1830,' and which easily surpassed its model in orderly arrangement and in literary charm. The chief fault that we can now find with Mr. Ireland's 'Records' is that it ceases in 1860. It is greatly to be regretted that the past twenty-seven years have not yet found a chronicler. With loving care Mr. Ireland had also written a life of Mrs. Duff for Mr. Hutton's "American Actor Series." This biography of Cooper seems to us, if not better than the sketch of Mrs. Duff, at least more needful, for Cooper was far more prominent and of more importance in our play-houses than ever was Mrs. Duff. Cooper held his own against George Frederick Cooke and Edmund Kean and Junius Brutus Booth. He was the model that the young Edwin Forrest strove to imitate. In his youth the pupil of William Godwin and the friend of Thomas Holcroft, in his old age he was welcomed in the best circles of New York. What his career was, what his character, what his powers as a performer in comedy and in tragedy, can be seen fully set forth in Mr. Ireland's pages, which are studded with letters and playbills and casts of plays. The memoir is written in simple and straightforward fashion, and it is accompanied by a full list of Cooper's parts, which serves to show the range and variety of his histrionic faculty; and by an abundant citation of contemporary criticism, exhibiting the diversity of opinion which has almost always been manifested in regard to all great actors. The book is enriched by an index and adorned with a portrait and with a facsimile of one of Cooper's letters. It is beautifully printed at the De Vinne Press.

Dr. Doran's 'Annals of the Stage' is one of the best and best-known books about the theatre. It is, perhaps, a greater favorite in America than in England. There is, for example, an American large-paper edition printed at the Riverside Press a score of years ago; and in 1880 it was issued again in this country in two volumes in the more or less complete edition of Dr. Doran's writings, enlarged by a slight memoir of the author and an introductory and a concluding chapter by Mr. R. H. Stoddard. The present edition, by so competent a hand as Mr. Lowe's, is none the less welcome. Until recently, Mr. Lowe was known in America only as the contributor of certain admirable, though brief, biographical sketches of distinguished performers to 'Actors and Actresses of Great Britain and the United States'; but his 'Bibliographical Account of English Theatrical Literature' revealed his extraordinarily minute knowledge of the details of theatrical history. He is just the editor needed by so careless a writer as Dr. Doran, who had read much rather than well. Very wisely he has nowhere modified the pleasantly written text of 'Their Majesties' Servants,' contenting himself with a frequent note in which to give a more exact reference, or to correct a blunder. This is as it should be, and the result is most satisfactory. With all its obvious faults, Dr. Doran's book is the best existing history of the English stage; it is a gallery of portraits of authors and actors. That his Annals stop at the death of Edmund Kean—as Mr. Ireland's 'Records of the New York Stage' stops in 1860—is a misfortune;

and we wish that Mr. Lowe might be tempted to add a fourth volume to the three of the present edition, in which he would continue the history for half a century, bringing before us Macready, Charles Kean, Fechter, Sothern, Helen Faucit, Mr. Boucicault, and Mr. Irving, and digressing to relate the incursions of Miss Cushman, Forrest, and Mr. Jefferson.

The present edition is sumptuously printed and illustrated. There are fifty copper-plate portraits in the three volumes, and eighty wood-engravings—the latter printed on Japanese paper and mounted on the page as head and tail-pieces. The portraits are of varying value, and the success with which they have been reproduced is also variable. One strange error of ascription deserves to be pointed out: in the third volume there is a plate which the list of illustrations declares to be "Master Betty, the Young Roscius," but which is really a portrait of Master Burke, as surrounding sketches of the performer in his chief parts plainly indicate. Master Betty, for example, did not play the fiddle; the "Master Burke" of the past is now a teacher of music at Washington.

M. Édouard Thierry was one of the best managers who ever presided over the Comédie-Française, and it was his duty to guide it through the dark days of the Prussian siege and the revolt of the Commune. During this time he kept a journal in which he jotted down the details of the affairs of the theatre and the rumors of the greater strife which came to him from outside. It is this journal which he has now published, and it is very curious reading, of interest only to those who delight in studying the workings of French character under pressure, and to those who are collecting the minor facts of French theatrical history; other readers would no doubt find it dull. The great house of Molière was carried through the storm, partly owing to M. Thierry's skilful guidance, partly owing to the devotion of M. Got, who assumed a great responsibility in taking a part of the incomparable company across the Channel to play in London. M. Got's account of this first visit of the Comédie-Française to England has already been published by M. Georges d'Heylli, and this journal of M. Thierry's now supplements it by setting forth day by day the adventures of those of the company who remained in Paris and continued to act at their own theatre.

M. Pierre Giffard is a journalist who has had a hand in one or two plays. The experience acquired in his dual capacity he has utilized in a theatrical novel. 'La Tournée du Père Thomas' has been called a new 'Roman Comique'—but M. Giffard is not the first husband of Mme. de Maintenon! His is an easy sketch (*bon enfant*, the French would call it), lacking altogether in *documents humains*, and yet truthful enough in the main. *Aller en tournée* is the French equivalent of "going on the road," as we Americans say—"touring," the English call it. As yet no American author has told the tale of a theatrical company's season "on the road," with its ups and downs, its hardships and its pleasures, its exhausting railroad journeys and its equally fatiguing "one-night stands"; but there exists an English novel covering much the same ground as M. Giffard's, and it is instructive to compare the black and bitter 'Mummer's Wife' of Mr. George Moore with the good-humored 'Tournée du Père Thomas.' It is a sorry existence at best which we see depicted in either book; and if we knew a young person of either sex bent on going on the stage, we should suggest a careful study of both stories.

Mme. Ristori's autobiography appeared in Paris in French late last fall, and an English translation has recently been issued in London. In America this translation is published as a volume of the "Famous Women Series"—a very strange proceeding, and we earnestly hope wholly unauthorized on the part of the distinguished Italian actress, a lady as well as an artist. Two actresses, Rachel and Mrs. Siddons, have already been included in the "Famous Women Series"; but they were at least the more admissible as being dead, and therefore open to "traditional" treatment. It is the *traditions* about the artists of the stage (and this holds true in large measure of artists in painting, and the plastic arts, and in music), and not their stories, that are of value. This is not only the first autobiography, but the first biography of a living woman that has been given in this series—an innovation to be regretted, and the choice is in every way absurd. Shall we have later the autobiography of Sara Bernhardt? She is more deservedly *famous* than Mme. Ristori, as well as much more given to advertisement. The seventeen preceding volumes have, with the exception of the two just spoken of, had for their subjects, rightly, women who were remarkable for force of character, and who exercised by their writings, or otherwise, an influence of longer duration than their mortal lives. For no actress can this be the case beyond an insignificant degree.

The first half of the volume, containing the narrative of Mme. Ristori's life, is inexpressibly dull; and the last half, containing the analyses of her conceptions of six of her principal characters, and her mode of acting them, is not less trivial and commonplace. It is even vastly inferior to Lady Martin's (Miss Faucit's) vapid criticisms of her own Shakspere parts. In conclusion, the book is badly written, and worse translated, and is altogether a wretchedly paltry piece of work.

Harvard Reminiscences. By Andrew P. Peabody, D.D., LL.D. Boston: Ticknor & Co. 1888.

Dr. Peabody graduated in the eminent class of 1826, and his aim in composing this little volume has been to commemorate every college officer whose name was catalogued with his while he was undergraduate, theological student, and tutor. He devotes a special chapter to life at Harvard sixty years ago, and incidentally, too, throws much light upon it. Only five years before he entered, a Hebrew oration had been a regular feature of the Commencement exercises. Examination in the Greek Testament (at a time when no Greek-English lexicon was to be had) was still obligatory. The course in mathematics lasted four years. The mere statement of these three particulars shows, in comparison with the present elective system, how far the College has swung away from its ancient ecclesiastical moorings. Dr. Kirkland was President during our author's academic education, and, with a single exception, for more than a century none but clergymen had held the office. He was succeeded by a layman, Josiah Quincy, who quickly swept away one of the obnoxious survivals of the day when "pious citizens of Boston used to send their slaves to Commencement for their religious instruction and edification," until the custom simply amounted to a riotous holiday:

"When I entered college," says Dr. Peabody, "the entire Cambridge Common, then an unenclosed dust-plain, was completely covered on Commencement-Day, and on the nights preceding and following it, with drinking-stands, dancing-booths, mountebank shows, and gaming-tables, and I have never since heard such a horrid din, tumult, and jargon, of oath, shout, scream, fiddle, quarrelling, and drunkenness, as on those two nights."

By far the largest part of the actual instruction was by lectures, and there can be no doubt that the courses then available, imperfect as the scientific part necessarily was, richly compensated the defects of the routine curriculum. A body of very remarkable men communicated not merely their learning but their personality to Dr. Peabody's college generation. Chemistry was practically neglected, but "we had courses on physics and astronomy by Prof. [John] Farrar, of whose surpassing eloquence I have already spoken; on technology by the late Dr. [Jacob] Bigelow; on anatomy by Dr. John Collins Warren; on hygiene by Dr. [James] Jackson; on law by Chief-Justice [Isaac] Parker; on French and Spanish literature by Prof. [George] Ticknor; on the canon of the New Testament by the elder Dr. [Henry] Ware." Of the regular instructors, Edward Tyrrel Channing, brother of the more celebrated divine, undoubtedly possessed the highest qualifications for his profession. His appointment, at the age of twenty-nine, to the chair of rhetoric and oratory "was perhaps the most important ever made in the interest of American literature," says Dr. Peabody; and in this opinion he does not stand alone.

The lights of the Unitarian denomination are prominent on Dr. Peabody's roll, and one more tribute is paid to the lamented Follen, who in these athletic days might well be remembered by bust, painting, or memorial window as the first to introduce gymnastics, *more Germanico*, at Harvard. Dr. Peabody does not allude to the true cause of his losing his professorship, the pro-slavery intolerance of the time, and one thinks of this omission after having read the almost unbroken series of kindly judgments and what we may call Christian certificates bestowed on the subjects of these sketches. We would quarrel with none of the characterization as unwarranted, yet in the application of all their admirable qualities to social and public life they notoriously differed on the absorbing question of slavery—Follen, for instance, ranging with Palfrey and Quincy on one side, Story, Ticknor, Everett, Felton, and Peirce together on the other. During the period of the so-called Salem régime, the political, intellectual, and social weight of Harvard College as an organized institution was distinctly given to the side which now has hardly a champion even south of Mason and Dixon's line.

Dr. Peabody's pages are enlivened with many humorous touches by way of anecdote and otherwise. Speaking of the *American Monthly Review*, founded by Sidney Willard, he says that he never saw Felton angry but once, after having passed in a contribution to the *Review*:

"He had written, and sent to the press, an article somewhat rhetorical, though by no means distastefully high-flown; and the proof came to him with 'Froth' written in the margin against the most ambitious sentence in the copy. Felton went at once to the printer to complain of the insolence of his compositors in presuming to make insulting criticisms of the work under their hands. The explanation was promptly and satisfactorily given: at precisely that point, the work was passed over to a compositor named Frothingham."

The state of literary criticism at that period is illustrated by the fact that the *Review* being conducted by Unitarians, a scathing notice of Prof. Moses Stuart's edition of Cicero's 'De Officiis' was treated as sectarian, and cost the magazine almost every Calvinistic subscriber, although written by an orthodox Yale professor. So the exposure of a charlatan in geology drew off scores of his admirers, and brought down the enterprise in ruins.

Negro Myths from the Georgia Coast, Told in the Vernacular. By Charles C. Jones, jr., LL.D. Boston: Houghton, Mifflin & Co. 1888.

Two pleasant surprises await the reader of this book, viz., that so many additions can still be made to the store of "Uncle Remus," and that Mr. Jones's transcription of "the vernacular" is worthy to be ranked with Mr. Harris's. This Georgia-coast dialect is nothing else than the primitive speech of Daddy Jack, but, as here rendered, it will be found, owing to its syntax, especially, much harder to understand, and especially to read aloud, than its forerunner in 'Nights with Uncle Remus.' It is a little complicated, too, by some phonetic inconsistencies, as when *for* is written in two ways in a single paragraph—"fur eat," "fuh eat" (p. 25), or again, "fur me" (p. 3) compared with "fuh mo" (p. 15). This may very well represent a divided usage, also observable in the curious locative word *duh* or *der* (in the, of the, to the, into the, etc.), *e. g.*, "Eh see de King Crab duh squat een de water *duh* bottom er de boat"; "een de closet *duh* garret"; "fuh feed ehself un eh fambly *duh* winter time"; "eh gone *der* bottom." The identical meaning of these two forms is not pointed out in the glossary, nor is *duh* (which is much the commoner in Mr. Jones's handling) allowed the above signification at all; "was" and "were" being the sole recognized equivalents. Apparently this sense is assigned to a very prevalent and curious use of *duh*, to form the only present participle employed in this collection. In the examples which we shall now give, however, *duh* seems rather to stand for "do" with the infinitive: "Eh couldn't ketch um *duh tief* de water"; "Wen Buh Wolf yent *duh watch* um" (wasn't watching him); "Wuh you *duh do* yuh anyhow?" "Buh Tukrey Buzzard rise wid de Crab *duh heng* on ter eh leg"; "Eh meet Buh Rabbit *duh siddown duh wait* [sitting down waiting] fuh hire somebody fuh cahr him meat ter him house," etc. Another unfamiliar term is *blan*, as: "Enty you *blan* tek water outer me spring?" (ain't you in the habit of taking). Finally, the substitution of *b* for *v* is noticeable: *mobe* (move), *bex* (vex, vexed).

When we come to the substance of the fables, we find no inconsiderable number which are mere variants of Uncle Remus. Such are the widespread myth of the race between deer and tortoise, the ever-delightful Tar Baby, Buh Wolf ridden in triumph by Buh Rabbit, the stories of "Buh Rabbit, Buh Fox, an de Fisherman," of "Buh Rabbit, Buh Wolf, de Dog, an de Goose" and the parallel "Buh Rabbit, Buh Wolf, an de holler tree," of "Buh Alligatuh, Buh Rabbit, an Buh Wolf" (Daddy Jack's inimitable "Brother 'Possum gets in trouble"), etc. Mr. Jones undertakes no framing of his fables—no machinery of the cabin and its inmates—so that, dialect apart, there is a direct comparison between his mode of narration and Mr. Harris's, whose greater art is well exhibited in the common tale of the 'coon and the 'possum. On the other hand, Mr. Jones's appended morals are very pithy and taking—as, touching saying grace at the right time, "Bes plan fuh er man fuh mek sho er eh bittle [victuals] befo eh say tenky fuh um."

Buh Rabbit remains the hero of this black folk-lore; but though his "schemy" character is again and again illustrated, not without occasional disapprobation, it cannot truly be said of him, "Ebry time you yeddy bout Buh Rabbit, you fine um duh come out head." In the division of the cowmeat, he is cheated out of his portion by Buh Pattridge, contrary to his better luck on a similar well-known occasion. And we may say here that the birds play an interesting part in this collection. The impudent Buh Sparruh, who "yent much fur wuk," rivals Buh Rabbit in laziness and untruthfulness. The parable of the fowl-hawk who, "Lord er no Lord," in a season of scarcity, "manage fuh fine all him want fuh eat," but impales himself by mistake on a stump, and so furnishes a meal to the starving but still pious buzzard, is irresistible. "'De man wuh trus in ehself,' moralized Daddy Sandy, 'guine fail; wile dem dat wait topper de Lord will hab perwision mek fur um.'" The alligator, as was to be expected, cuts a relatively conspicuous figure in these pages.

We must not close without mention of the stories distinctly derived from Europeans, like "De Debble an May Belle" (Bluebeard), "De Two Fren an de Bear" (Æsop), "Buh Lion, Buh Rabbit, Buh Fox, an Buh Roccoon" (a very noticeable version of Herodotus's story of Agamedes, the thieving architect of the treasure-house of Rhampsinitus, whose unhappy rôle is here taken by the coon), and such Orientalisms as "De King an eh Ring" and "De Ole King an de Noung King." For these, as well as for the strictly African myths, Mr. Jones and his publishers deserve the hearty thanks of the reading public.

The Chess-Player's Manual. By G. H. D. Gossip. Revised and edited and with an American appendix by S. Lipschütz. Geo. Routledge & Sons.

It may be said of books on chess as the Kentuckian said of brands of whiskey—some are better than others, but all are good. The game stands supreme among intellectual amusements: its combinations are infinite, and its fascinations imperishable. There cannot be too many books about it. From the inexhaustible field of discovery every faithful laborer can bring something of interest. In this age we have chess-writers, chess-players, chess champions, and chess clubs, and there is no danger that the noble game will die or even decay; but it is to be regretted that it has not a stronger hold at the fireside. Properly speaking, it has no rival, but there are amusements, some of them evil, which to a great extent supplant it. Of the young people of the present day probably ten know the value of a "flush" and a "full"—and know it "for stamps," as they say—where one knows the difference between a bishop and a knight.

The manual before us is an octavo volume of 882 pages, published in 1874, and now republished with an appendix of 120 pages by the champion of the Manhattan Club of New York. The original work and the appendix are valuable in themselves, and, taken together, they may be regarded as exhaustive of the subject to the present date. The large bulk of the volume is due, of course, to the heavy demand made upon space in presenting tabular statements of games necessary to explain the openings, and to show by the games actually played by the best players the changes that time has produced in attack and defence. The work is commendable not only to beginners, but to the most advanced chess students.

Homestead Highways. By Herbert Milton Sylvester. Boston: Ticknor & Co. 1888.

This volume is in the same style as the author's previous 'Prose Pastorals,' and describes scenes of New England life of the sort of which Whittier's 'Snow-Bound' is the lasting memorial. The greater part of the volume is taken up with pictures of the snow-storm on the eve of Thanksgiving, the drive to the meeting-house and the sermon by the old pastor, the farm-house dinner, and the fag-end of the day; and in a second paper the opening of the district-school, the scenes of school-boy life, and the personality of the teachers. The remaining chapters lack the directness and concentration of these two. The style is pleasant, and always touched with that reverence for the early days of country life, and loving reminiscence of them, which are traits of the New England nature; and in living the old time over in these sketches the author has depicted it with such reality and simplicity that his own past has the value of a type, and will be a welcome reminder to the lovers of this kind of literature, who are not few, of the humble annals of many country homes.

BOOKS OF THE WEEK.

Scribner & Welford's

NEW BOOKS.

Caldecott's North Italian Folk.

Sketches of Town and Country Life.

By MRS. COMYNS CARR.

Illustrated by Randolph Caldecott. 8vo, cloth. $6.00.

NOTE.—A new issue of 250 copies, colored by hand, each numbered.

By Author of 'Handley Cross,' etc.

Hillingdon Hall;

Or, The Cockney Squire. A Tale of Country Life. By R. S. Surtees, author of 'Handley Cross,' 'Jorrocks's Jaunts and Jollities,' etc. 12 full-page illustrations by Wildrake, Heath, Jellicoe, printed on Whatman paper and colored by hand. Demy 8vo, 520 pp., cloth, net, $4.00.

NOTE.—This, one of the best of Mr. Surtees's works, was originally commenced in the "New Sporting Magazine," and illustrated by the inimitable artists, Wildrake and Heath, but was not completed in that magazine. It was afterward published complete in a three-volume edition. The five illustrations now added are by John Jellicoe, and illustrate the latter portion of the work not done by Wildrake or Heath.

Princetoniana:

Charles and A. A. Hodge, with Class and Table Talk of Hodge the Younger. By a Scottish Princetonian, the Rev. Charles A. Salmond, M.A., Rothesay. With portraits, etc. Crown 8vo, cloth, $1.25.

"A very interesting work. . . . The agreeable conversational style in which the brief memoirs are written makes this part of the work pleasant to read beyond the common run of similar memorials. The collection of jottings from the lectures and table talk of Dr. A. A. Hodge is valuable for the racy vivacity and point of the various utterances, which have quite as much biographical as theological significance. . . . Will be welcomed as an interesting memorial of two memorable men, and as a vivid sketch of the manner in which theology is taught at Princeton."—*Scotsman.*

The Bastille.

By Captain the Hon. D. A. Bingham. With numerous illustrations, 2 vols., demy 8vo, cloth, $8.00.

"Captain Bingham's work is exhaustive, and it will take rank as an indispensable and most valuable book."—N. *Y. Tribune.*

Baedeker's European Guide-Books.

FULL SUPPLY OF LATEST EDITIONS just received. Illustrated with numerous maps, plans, panoramas, and views.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE,

With Dictionaries and other Books of Reference,

Comprising in all Translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin and Greek.

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS.

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from Original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New Edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By Georg Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but academic English."—*St James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M. A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M. A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS.—THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon.) 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 3 vols. Transl. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock, also complete lists of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Special Net Books ready. New Catalogue of Choice and Rare Books.*

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

READ

The Railway Articles

IN

Scribner's Magazine.

THE JUNE NUMBER

CONTAINS:

THE BUILDING OF A RAILWAY. By Thomas Curtis Clarke, Engineer of the Poughkeepsie Bridge, of parts of the New York Elevated Road, etc., with 40 illustrations by A. B. Frost, Walter Shirlaw, A. M. Turner, J. D. Woodward, and others.

A NOVELETTE by Henry James, "A London Life," begins in this number.

SOME GENTLEMEN IN FICTION. By Robert Louis Stevenson.

CORYDON—A PASTORAL. By Thomas Bailey Aldrich.

HOSPITAL LIFE. By A. B. Ward. With illustrations from drawings by J. Alden Weir, W. L. Taylor, Francis Jones, and Charles Broughton.

THE STORY OF A SAND PILE. By G. Stanley Hall.

CARDINAL NEWMAN. By Augustine Birrell. With two portraits.

LALOR ABBOO SINGH. A Striking Short Story. By George H. Jessop, the well-known dramatist. Serial, poems, etc., etc.

*** Among the handsomely illustrated articles in the Railway series which will immediately follow are:

FEATS OF RAILWAY ENGINEERING. By John Bogart, State Engineer of New York, etc.

AMERICAN LOCOMOTIVES AND CARS. By M. N. Forney, author of the "Catechism of the Locomotive."

RAILWAY PASSENGER TRAVEL. By Gen. Horace Porter, who writes of the comforts and luxuries of modern travel. Illustrated.

THE RAILROAD MAN'S LIFE. By B. B. Adams, jr., who was formerly in active railway service, and will tell, in a popular way, of the duties, dangers, and pleasures of the employee's life.

25 CENTS A NUMBER; $3 00 A YEAR

*** For sale by all Dealers.

743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, MAY 31, 1888.

The Week.

AMONG the really telling speeches on the tariff question that the present debate has brought out, that of Mr. Fitch of New York is entitled to preëminence for calmness, sobriety, and common sense. It is the second Republican speech during this session of Congress that has put the fiscal aspect of the tariff above the partisan aspect, that of Mr. Nelson of Minnesota being the other. These two have discussed the question as though it were one of taxation and of dollars and cents, in which Republican taxpayers are as much interested as Democratic. They alone have approached the schedules of duties on imports with the understanding that men may honestly differ as to the rightfulness of a particular rate on any particular article of commerce. No other speaker on that side has admitted that a duty of 100 per cent., for example, should be reduced to 99 per cent., or that the question of reduction can properly be raised and drawn into debate, except on the single article of sugar. Here there is a wide difference in the Republican camp. Mr. Kelley and his school of Chinese-wall builders would not allow the smallest reduction on sugar, any more than on pig-iron. But the majority of the party would gladly throw the sugar-planters, and also the beet and sorghum cranks, overboard in order to save the remainder of the protected classes. They tell us that the doctrine of protection does not apply to sugar, because after half-a-century of continued effort we have not succeeded in increasing the product of home grown sugar. This is substantially true of hemp, flax, carpet wools, tin plate, woollen dress goods, and many other things, the duties on which the Republicans will not allow to be touched, and would not allow even to be talked about if they could have their way. But the argument as applied to sugar has a strange sound when we listen to the appeals of the beet-root growers in California and the sorghum experimenters in Kansas, who tell us that if we will only have patience and continue to pay $60,000,000 a year, they will show us a "development" equal to that of France and Germany in the production of sugar. These appeals are based upon the true protectionist philosophy, and they are supported by an example of much force in the Old World.

When Mr. Fitch insists upon looking at the separate items of the tariff in order to see what inequalities, and, therefore, what wrongs and injustices, it may contain, he merely reverts to the principles of common sense which such leading Republicans as Sherman, Garfield, Allison, and even the author of the Morrill tariff, avowed, and which two-thirds of the party in the House sustained by their votes, a few years ago. The present position of the party, as Mr. Fitch says, is that although the tariff needs amendment, it should only be amended by its friends. The present inequalities, wrongs, and injustices should be continued until the Republicans secure a majority of both branches of Congress. And here Mr. Fitch makes what we consider his strongest point, namely, that this argument requires that acknowledged wrong and injustice should be continued for ever unless the Republicans carry a national election. But, he says, when the Republicans do carry a national election on this issue, it will be urged with irresistible force that the people's verdict is against any meddling with the tariff, so that the wrong and injustice must be equally perpetuated whether the Republicans carry the election or not. The conclusion is enforced by all the experience we have had since the close of the war, that if the reform of the tariff can only be made by its friends, it will never be reformed at all, no matter how odious and oppressive it may become. The Republicans cut down the duties 10 per cent. in 1872, but they restored them to the old figure in 1875. They created the Tariff Commission in 1882, only to upset and nullify their reformatory work in the following year. Then they went out of power, and took the position that no reform must be made or attempted until they got into power again. This dog-in-the-manger policy Mr. Fitch has exposed thoroughly, and has made a national reputation by so doing.

The arguments made in the House in favor of the bill to prohibit the transportation of goods manufactured by convict labor from one State to another, were of the nauseous character usual to demagogues when they address themselves to Labor. Remark that the prohibition is not directed against commerce in hurtful articles, but merely in articles produced in a certain way. The same arguments employed to prohibit the transportation of goods made by convict labor would be equally effective and valid to prohibit that of any other goods. The bill, in fact, opens the door for a general scheme of inter-State protective legislation. It would be quite in keeping with such legislation to pass a law prohibiting the transportation of cheap manufactured goods from Massachusetts to the Southern and Western States where "infant industries" have been started. In fact, the arguments used by Mr. Cabot Lodge in favor of this bill are exactly adapted to support such a measure. Mr. Lodge cited the case of cocoa matting produced in the Pennsylvania State prison. This cocoa matting, he said, had severely crippled the manufacture of such matting in his own State. Perhaps so —perhaps not. Every manufacturer is interested in getting a rival out of the way, whether it be the product of prison labor or of free labor. His word is not to be taken upon that point without thorough investigation. But supposing that the manufacturers of boots and shoes in Illinois find that the competition of manufacturers in Massachusetts "severely cripples" them, is there any constitutional reason why they should not have a law passed to prohibit the transportation of boots and shoes from Massachusetts to Illinois? Moral reasons there are in plenty, but we are speaking now of constitutional reasons. We can see none whatever, but we can see plainly that Mr. Lodge and those who agree with him are blazing the way for inter-State protection laws, from which the older manufacturing States will be the first and principal sufferers.

The Anti-Prison Bill, if it could be put in force at all, would disorganize all the prisons in the country. The Governor of California protested against it, saying that that State, after multiplied efforts to employ convicts on work not performed by free labor in the State, had got to work at last on jute-bags, which are sold to farmers in Oregon and Washington Territory, and that the passage of the bill would cut off that resource and leave the prisons a sheer burden on the taxpayers, all of whom are now satisfied with the happy settlement of the prison-labor question. Mr. Outhwaite of Ohio said that 700 prisoners in his State were out on parole under a ticket-of-leave system, working for wages, and that the bill would drive them back to the prisons to be supported by the money of the taxpayers, because nobody would hire them if their products could not be sold. The case was cited of the manufacture of saddle-trees in the Missouri penitentiary for the Mexican market, 95 per cent. of the product being exported to Mexico, none of which could be sent out of the State under the provisions of the bill. Mr. Adams of Illinois said that the penitentiary authorities of his State, after infinite trouble in meeting the demands of labor, were experimenting in the manufacture of brick for the lower Mississippi districts, where there was no clay suitable for brick-making, and that this resource would be cut off by the bill, to the great injury of the State of Illinois, which made the bricks, and of the States which desire to purchase them. All was of no avail. The bill passed by a vote of 185 to 44, and thus Labor secured a great triumph in the way of increasing local taxes in order that convicts may have plenty to eat and nothing to do. But it was shown in the course of the debate that the real movers for the bill were a few manufacturing firms in the larger cities, who, of course, did not omit the opportunity to show that wages were depressed by convict labor, and that they would be enabled to do much better by their workmen if prison labor, amounting to 54-100 of 1 per cent. of the mechanical labor of the country, were suppressed altogether. The prospect of an increase of 54-100 of 1 per cent. in the rate of wages must be very alluring to the working classes. But where is the

guarantee that employers of labor will pay it to the workmen when they get it?

The *Tribune*, backed by Mr. Joseph Nimmo, jr., has conceived a sudden liking for foreign commerce, and calls loudly for duties of 40 per cent. against goods transported by the Canadian Pacific Railway in order to get some. There is a better way to attract foreign commerce than the establishment of discriminating tolls against the carriers of the same. What the country needs, and what it is in a fair way to obtain, is the lowering of existing duties, not the enactment of new ones. If Canada chooses to subsidize a railway across the continent, she only follows our example of twenty years ago. We hope she will not have as much trouble with her Pacific-railway subsidy as we have had with ours. If she chooses also to subsidize a steamship line to Asia, here again she only follows our example, and here again we hope she may reap more wholesome fruits than we did.

The *Times* has information from Washington that the special Committee of the House appointed to investigate the Reading strike are considering favorably a bill to put any railroad in the hands of a receiver which fails for thirty days, on account of any difficulty with its train hands, to discharge its duties to the public as a common carrier. The bill is said to provide, also, that train hands must give at least ten days' notice of intention to strike, and that railroad companies must likewise give at least ten days' notice of an intention to reduce wages. It would, of course, be improper to criticise such a measure in detail until its details are furnished, but if any such measure is contemplated, it is difficult to see how it is to be reconciled with article 5 of the amendments to the Constitution, which says that no person shall be deprived of his property without due process of law, and that private property shall not be taken for public use without just compensation. The appointment of a receiver is a judicial act, and cannot possibly be made a legislative or an executive act. A receiver is, in fact, an officer of the court. He stands in the place of the judge as to certain things. All his acts, from taking possession of the property to the sale or rendition of the same, are the acts of the court. Now, the proposition is that the judges of the United States courts shall take possession of and operate all railroads that have disputes with their train hands, provided the train hands seize the road or terrorize the community so as to prevent the regular running of trains for thirty days. We do not believe that any court will assume the responsibility of appointing a receiver to take possession of a solvent railroad which is making due and diligent efforts, as the Reading Railroad certainly did, to discharge its duties as a common carrier.

The negotiation of about $25,000,000 of Reading 4 per cent. bonds and $12,000,000 first preference incomes, as announced on Friday, is the culmination of one of the largest business undertakings of modern times. We say the culmination, because the negotiation of this first instalment of the new securities to replace others bearing a higher rate of interest insures the negotiation of the remainder. There is an increasing demand among the investing public for low-interest bonds that are well secured, as is shown by the firmness with which the West Shore 4s have always been held. This demand is accentuated by the purchases of Government 4s and 4½s by the Secretary of the Treasury, and by the near extinction of the latter class of securities, which run only three years longer. When the remainder of the $100,000,000 of Reading 4s (less the portion reserved for prior-lien bonds, etc.) are taken, the total fixed charges will be reduced $1,500,000. The other and minor parts of the plan of reorganization have always hinged upon the success of the $100,000,000 loan. It may be assumed, therefore, that the contemplated reduction of fixed charges is within sight. The plan of reorganization embraces the Coal and Iron Company as well as the Railroad Company, and among the fixed charges under the new mortgage is a sinking fund of ten cents per ton of coal mined to replace the capital represented by the coal so disposed of, this sinking fund to be invested either in the company's securities or in the acquisition of other coal property. The company owns about 36 per cent. of the anthracite in Pennsylvania, and the supply is computed to last until the year A. D. 2057, allowance being made for a progressive increase of consumption.

Senator Stewart of Nevada has made his promised speech in support of his proposition practically to abolish the veto power, by allowing a majority of Congress to pass a bill over the President's objections, and a curious sort of speech it was, filled largely with complaints of the Government's policy regarding silver, the purchase of bonds, the disposition of the public lands, etc. When he came down to facts about the matter in hand, he showed himself utterly misinformed. He said, for example, that "there is a growing sentiment in the States against the veto power," and in support of this statement declared that "nine of them have already qualified it, so that a majority of the Legislature can pass a bill over the veto of the Governor." The truth is that the tendency has been strongly in the opposite direction. Five of the original thirteen States at first gave the Governor no veto power, but have since conferred it upon him, Connecticut in 1818, New Jersey in 1844, and Maryland, Virginia, and South Carolina since the war. Moreover, instead of a disposition to qualify the power by reducing the proportion of votes necessary to override a veto, the drift has been strongly the other way. Only two States have ever made such a change, Kentucky having changed from a two-thirds vote in 1792 to a majority vote in 1799, and Nebraska, which began in 1867 with two-thirds, having changed to three-fifths in 1875, while Missouri, Florida, and Illinois have changed from a majority to two-thirds. Furthermore, New York, Pennsylvania, and some other States have increased the veto power by giving the Executive the right to disapprove single sections of appropriation bills.

It would be easy to show that this steady increase of the Executive's share in the business of legislation has been to the public advantage. Four of the States have never given the Governor any veto power—Rhode Island, Ohio, Delaware, and North Carolina—while Ohio does not even require the Executive signature to a legislative act. The result is, that the Governor of Ohio exercises but little influence, and there is no check upon the folly of a Legislature. Even the limited veto power which can be nullified by a majority vote, is better than none at all, as Gov. Buckner of Kentucky repeatedly proved during the recent session of the Legislature. That body passed a number of ill-considered acts which he could not approve, and though a majority could overcome his objections, he was sustained in every important case, so strong were his messages. But the pride of legislative opinion is usually so great, and the force of partisanship generally so strong, that as a rule the Executive needs the requirement of at least a two-thirds vote to overcome his objections. The development of our institutions has shown that the early fears of the Executive's grasping too much power were groundless, and that the centring of responsibility upon one man, through the veto prerogative, may save the people from terrible evils which the representatives of the people, with their divided responsibility, may be ready to sanction, as when Congress passed the Inflation Bill in 1874, and a majority (but not two-thirds) of the Senate voted to pass it over Grant's veto. Instead of diminishing the present veto power, the next change is likely to be its extension, through a provision which will give the President the right to veto separate items of an appropriation bill.

The Maine Democrats have made a most admirable nomination for Governor in selecting Mr. William L. Putnam of Portland as their candidate. Mr. Putnam is a lawyer of such ability and standing in his profession that he was properly regarded as within the range of choice when the vacancy in the Chief Justiceship was under consideration. He has been Mayor of his city, was one of the Commission which framed the Fishery Treaty, and would make an excellent Governor. Mr. Putnam recently made an interesting contribution to political discussion in a thoughtful letter to a Portland club, giving his views as to the national reforms which are now most needed. Beginning with the proposition, which everybody will concede, that the methods of government in a republic should be so simple that there need not be an official class, he pointed out that "a republican form of government ceases to be

truly republican when, by reason of its complex nature or of monopolization by a body of interested persons, it passes in its principal relations beyond the ordinary understanding of the professional man, the merchant, the mechanic, or the farmer, or is shielded from the just influence which citizens in the ordinary walks of life ought properly to wield." He then showed how the protective tariff and the spoils system are separating the ordinary citizen from the administration of public affairs; the former by so complicating our taxing systems as to put them beyond the comprehension of anybody but an expert, while the latter "continuously promotes the growth of an interested class, at times salaried by the Government, and always encouraged to devote itself to grasping a monopoly of public affairs." His conclusion, therefore, is, that "at present the most important thing is to resist the tendencies to segregation of the mass of the people from direct intervention in the affairs of government," by reform both in the tariff and in the civil service.

Anarchism and Socialism had a disagreement on Sunday at a joint meeting held at 201 Broome Street. Mr. L. Spector, or Spectre, was the presiding officer, and the question under debate was whether the "Russian Progressive Union" of New York should become a more radical organization than its name implies, or whether the radicals and the conservatives—*i. e.*, the Anarchists and the Socialists—should separate from each other and push their respective doctrines in different ways. The Socialists, being in the majority, voted to dissolve the union. Thereupon the Anarchists, according to the *Herald's* report, did "howl, wail, and gnash their teeth with fury." This was to be expected, but why did they call their late allies "scoundrels and thieves," as the report further narrates? How is a man lowered in the esteem of Anarchists by calling him a thief, or even by proving him to be one? This ought to be considered the highest title of honor except that of homicide. We were compelled to lament the inconsistency of the Chicago Anarchists—those who were not executed—when they cried out against the judicial murder of the bomb-throwers. We pointed out that if Lingg and his associates were, as they alleged, hanged contrary to law and without having had a fair trial, that was a public vindication of anarchy, and ought to be accepted as such, and not mourned over as a calamity. So, too, if the Socialist branch of the Russian Protective Union of New York is composed of thieves, who take property by a majority vote, they ought to be cheered and not hissed by their Anarchist neighbors.

The laying last week of the corner-stone of the great Catholic university which is to be reared in Washington was not only a noteworthy event in itself, but was given peculiar importance and significance by the remarkable address delivered on the occasion by the Right Rev. John L. Spalding, Bishop of Peoria, Ill. One could not imagine a more striking proof of the change which is coming over the Roman Catholic Church, and the wonderful adaptability to new conditions which it displays, than is shown by this eloquent address. "To do the best work," Bishop Spalding frankly said, "the Catholic Church must fit herself to a constantly changing environment, to the character of every people, and to the wants of each age." "If there are Catholics who linger regretfully amid glories that have vanished," he said further, "there are also Catholics who, in the midst of their work, feel a confidence which leaves no place for regret; who well understand that the earthly environment in which the Church lives is subject to change and decay, and that new surroundings imply new tasks and impose new duties." The keynote of this address was the supreme value of the higher education and the celebration of the true university as its seat—a university which "will be the home both of ancient wisdom and of new learning; will teach the best that is known and encourage research; will stimulate thought, refine taste, and awaken the love of excellence; will be a nursery of ideas, a centre of influence." The truth is, that a candid Protestant may read this address from beginning to end, not only without finding anything to arouse his indignation or excite his apprehension, but with a growing surprise at the elevation of its tone, the breadth of its view, the comprehensiveness of its scope.

The international controversy between the Lotos Club of this city and the Savage Club of London appears to turn on the question as to whether a mutual agreement to exchange "courtesies" means that the members of one club shall have the unrestrained privilege of getting drunk in and knocking down the members of the other club, and vice-versa. The Lotos Club takes the ground that it does not, and has severed the agreement because a London visitor to its quarters did get drunk and attempt to knock down an "Italian gentleman" who happened to be present as a member's guest. This is made the excuse for the discontinuance of "courtesies," but there are intimations from London that the decision to sever was first reached by the Savage Club because some of its members, many of whom belong to the theatrical profession, have suffered gross indignities in the Lotos quarters when they have sought to enjoy the "courtesies" promised them in the agreement. One of them is said to have heard himself called a "bum actor" when he was sauntering through the Lotos parlors, which, if true, must naturally have shaken even a Savage's confidence in Lotos courtesy. It is a painful controversy, and is in danger of casting a gloom over the Lotos banquet to the next eminent English actor who ventures upon our shores.

The long-delayed official explanation by the Mexican Government of the terms of the last foreign loan leaves even less ground than had been supposed to exist, for regarding it as a proof of a great advance of Mexican credit in Europe. Instead of eighty-six, at which figure it was at first reported the German banker Herr Bleichroeder would take the loan, seventy is the exact amount realized. The net result, therefore, is simply that the Mexican Government has been able to get money loaned it at a little over 9 per cent. interest, and that, too, only by making extraordinary pledges to guarantee punctual payment of this high interest, in the shape of a practical assignment to the bondholders of 20 per cent. of the customs receipts, together with nearly all the direct taxes of the Federal District. Inasmuch as Secretary Dublan represents the principal advantage of the new loan to consist in enabling him to pay off the floating debt, with its "heavy interest," it may be imagined at what rate he has been forced to pay the National Bank for moneys advanced to make good the annually recurring deficits. If it is a great stroke to get funds at 9 per cent., it is not so strange that popular rumor has made the rate before paid 12 or 15. It is to be remembered, also, that but one-third of the total loan proposed has yet been taken. It would not be strange if the whole scheme ended with this. Certainly European investors who should conclude that the new Mexican loan was promising, would have to do so in the face of such weighty financial authorities as the London *Times* and *Economist*, and the Berlin *Nation*. It was the latter journal that remarked, referring to the German subscriptions to the new Mexican loan, that "it was a new example of the old truth that no one is so confiding as the small capitalist."

M. Paul Leroy-Beaulieu, in the *Économiste Français* of May 12, finds reason to believe that a real revival of business is taking place in France, notwithstanding the depression of agriculture due to the bad harvest of last year. He sees evidence for this opinion in the gradually improving dividends of the finance, industrial, and navigation companies and the railroads, and in the gradually increasing yield of the general taxes and the octroi of Paris. The drawbacks to French prosperity are protectionism, political uncertainty, the apprehension of war, and the Panama Canal. "Without exaggeration," he says, "it is plain that all the symptoms, or nearly all, show a tendency to a sure revival of business. We see only two classes of adverse facts. On the one side, France is committing the folly, under the instigation of the ruling powers, of plunging deeper and deeper into the ruinous enterprise of Panama, which will swallow all the savings put into it without any return whatever. On the other side, politics does not seem to grow more reassuring. If we could oblige our radicals to give a little social peace to the country, to stop their agitations, their pretended reforms, and disturbing intrigues, if they could be induced to put our budget in equilibrium simply by economies that are not impossible, we should see the revival accentuated and unfolded; even the agricultural distress, grave as it is, lessened; and the country return to that prosperity which its many resources seem to make its normal condition."

THE ADMINISTRATION AND THE CUSTOM-HOUSE.

MR. MAYNARD, the Assistant Secretary of the Treasury, sent to the New York *Evening Post* the following telegram, which appeared in its issue of April 7:

TO THE EDITOR OF THE EVENING POST:
SIR: I have just seen the editorial statement in your issue of the 5th instant, that "pressure of the most extraordinary kind is being brought to bear on the Custom-house in this city by Assistant Secretary Maynard, to compel the officers to do things which he well knows would violate the President's pledges, degrade the public service, and debauch the party in power." The statement is utterly false, and as a journal with a reputation for fairness I shall expect you either to retract the charge or produce the proof that it is true.
J. H. MAYNARD.
WASHINGTON, April 7.

This letter was sent to Senator Hale, the Chairman of the Senate Committee appointed to investigate the operation of the Civil-Service Law under the present Administration, with a request that the Committee would visit this city, and inquire into the truth of the charge which Mr. Maynard so flatly denied. The Committee came accordingly, and the investigation has been made, beginning on Thursday of last week.

We wish to be strictly moderate in describing the result, and shall therefore simply say that there is only one way in which Mr. Maynard can escape the conclusion that in writing that letter he was guilty of deliberate falsehood. That way is by maintaining that the practices which he has just been proved to have indulged in at the Custom-house were not such as to discredit the President and degrade the service. This plea, however, if he put it forward, would be simply an inference of his own. The facts as proved before the Committee are, that he made out a "black list" of fifteen employees in the Appraiser's Department, and called on or "suggested" to Mr. McMullen, the Appraiser, to "recommend" their removal. One of these fifteen was Mr. Sherer, a sugar chemist of the highest standing in his profession, who had entered the service of the Government at its solicitation, and to his own pecuniary disadvantage, and whose removal without charges was therefore a distinct professional discredit. But no charges could Mr. Sherer succeed in obtaining. He was told that there was nothing against him. Mr. Maynard was distinctly informed, both by Mr. McMullen, the Appraiser, and Mr. Moore, the Assistant Appraiser, that the whole fifteen persons whose removal he had "suggested" were valuable officers, in whom their immediate superiors could find no fault, and whose removal would be a distinct loss to the service. Mr. Moore even said to him that if he was removing them as Republicans, he agreed that it was a good thing to do, but that if he was removing them as incompetent, he could tell him that they were in all respects most competent.

Mr. Maynard denied that he was removing them as Republicans, but still persisted that they must be removed. Two exceptions he made—one, that of Mr. Jacobs, whose name he struck from the list on hearing that he was a son of ex-Senator Jacobs of Brooklyn; the other, that of Mr. Leimbach, who took the precaution of going to see him and plead for his retention, in company with "Tim" Campbell, the Congressman from this city. On hearing from "Tim" that Mr. Leimbach was a constituent of his, Mr. Maynard struck his name from the list also. About the others he was inexorable, although as a matter of fact only four of them were actually removed; the remaining nine, as well as the two who were pardoned, were left in, probably owing to the fuss about the affair which began to be made when Mr. Maynard's appearance in politics, through his post-office circular, attracted attention. The pressure brought to bear on the Custom-house officers to effect these removals was sworn to in the most positive manner by its victims, Mr. McMullen and Mr. Moore, and their testimony was supported by Mr. Maynard's own letters, some of which it is not too strong to call shameful reading.

This was not all, however, nor the worst. It was proved that a man named McElwee was dismissed for insubordination and drunkenness. "Influence" went to work to get him restored. His restoration was actually ordered—that is, Mr. McMullen was ordered to recommend his reappointment, and he did it. It was then discovered that the reappointment was illegal, being forbidden by the Civil-Service Regulations, which provide that an officer dismissed for misconduct cannot be restored within a year. Nothing daunted by this, the brave Mr. Maynard got the rule modified to meet the case of this insubordinate drunkard, and had him put back, and he is in the service now. He is the son of the late Surgeon-General of the Confederate Army, and his "influence" is Mahoney, the Brooklyn Congressman.

We shall have more to say about this investigation hereafter. We merely wish now to call attention to the fact that Mr. Maynard has been proved guilty, not only of doing things which discredit the President, considering the promises he has made, and which degrade the public service, but of indulging in denials about it which ought to cause his prompt dismissal from his present place, and would cause it if he were in the service of any other civilized State, except France—for Boulanger's case unhappily proves that in France untruthfulness does not ruin a Government officer.

Secretary Fairchild has telegraphed, or caused or permitted to be telegraphed, from Washington an explanation of Mr. Maynard's doings in the Custom-house in this city, which unfortunately explains nothing. The only new contribution it makes to the subject is an acknowledgment that the Secretary knew of and authorized his subordinate's dismissals, removals, and restorations—something which those who have as much personal respect for Secretary Fairchild as we have will be very sorry to hear, because it is, though a generous sacrifice, a wholly useless one. Nobody—literally nobody—on whom the revelations made by the investigation on Thursday and Friday have made any impression will be in the slightest degree affected by it.

Mr. Fairchild appears to be living in that fool's paradise in which everybody, after three or four years of official life in Washington, seems to take up his abode. Two or three years ago, the apology he now puts forward for Mr. Maynard would have been accepted as, if not conclusive, at least weighty. But after the experience people have had during the last two years of the way the civil service has been managed, or rather mismanaged, in Maryland, in Pennsylvania, in Indiana, and Illinois, and of the indifference with which the remonstrances and protests of the Independents have been treated, of the coolness with which the public continued to be assured, in the teeth of notorious facts, that everything was going on as well as could be expected, and that there was nothing for any reasonable man to complain of, official "explanations" from Washington, whether they take the form of denials or lamentations, count for nothing. In other words, everybody connected with the Administration, from top to bottom, is discredited as an apologist touching Civil-Service Reform.

Therefore, if Mr. Fairchild, or any one else, wants to make it appear that his manipulations of the civil service have all had in view, not the fixing of caucuses and conventions, but the public good, he must go on the witness stand, papers in hand, and stand examination and cross-examination; and he must not take refuge behind "legal evidence" either. He must furnish us with human evidence—that is, the evidence on which men transact the ordinary business of life. For instance, when the Appraiser is ordered to ask for the dismissal of fifteen trusted and competent subordinates, without knowing why, and one of them is restored or exempted on the simple request of Congressman "Tim" Campbell, and another because he is the son of Senator Jacobs, it will not do to say that this was all along of those "sugar frauds," and that if we knew all about those "sugar frauds" we should see it was all right. It cannot be made right without telling all about those "sugar frauds," and convincing us that there are or have been any such frauds. Moreover, when a man of the personal and professional standing of Dr. Sherer is dismissed suddenly without cause assigned, and consequently dismissed with a stain on his reputation, it will not do for either Mr. Fairchild or Mr. Maynard to get rid of him and the public by mysterious nods and winks about "sugar frauds." Dr. Sherer's character is as high as Mr. Fairchild's, as high as Judge Maynard's, as high as President Cleveland's, or that of any member of the Cabinet; and people will never be content with seeing a stigma inflicted arbitrarily on such a man because he has had too much self-respect to get a "Tim" or a "Jake" to intercede for him at the Treasury.

Nor, when it is alleged on oath that Deputy-Collector Davis, and ten subordinates of his, all from Binghamton, N. Y., are allowed to absent themselves frequently from their duties here, in order to manage caucuses and conventions in Broome County, and that Davis got options

in real estate in Binghamton in order to sell a building site to the Government, and we ask is this true, and if so, how is it to be reconciled with the President's frequent pledges and promises about the political activity of office-holders, it will not do to answer us by crying, "Sugar frauds," and saying that Judge Maynard is a good man. We need a real explanation, not a sham one.

We might multiply these illustrations, but what would be the use? The painful truth is, that we doubt if a single independent voter in this State, of the thousands who supported President Cleveland in 1884, any longer attaches any importance to the utterances of the members of the Administration on the subject of Civil-Service Reform, or any longer refuses to believe that the President's promises and professions have been violated or disregarded on a great scale, with the utmost boldness, in sundry places and in divers manners, and that men like Judge Maynard and Surveyor Beattie have actually been detailed or told off to practise as much civil-service abuse as can be readily concealed or disguised when they are found out and exposed. Of course they must be shielded. It would be the worst kind of baseness to desert or sacrifice them.

We do not mean to say that anybody else has done better either in President Cleveland's or Secretary Fairchild's place than he has done. It will be a good while before we shall find men for high executive places who will be able to resist for a full Presidential term the influence of the purely official or political atmosphere at Washington in producing insensibility to the better sentiment of the country at large, even when it is that better sentiment which has given them their honors. Therefore, it is most desirable that the Senatorial investigation, such as is now pending in New York, into the operation of the Civil-Service Law, should be held annually. Nothing else will prevent its being evaded or nullified on a greater or less scale. Before its passage, the use of the offices as political spoils was a recognized and lawful practice, and there was, therefore, nothing for Congress to overhaul or inspect. Now, all this is changed. An annual visit from a Senatorial Committee to the leading post-offices and custom-houses would undoubtedly prevent such abuses as the present investigation is bringing to light, for they never would be perpetrated if exposure was certain within a year.

TWO NEW FIELDS FOR THE CIVIL-SERVICE RULES.

Secretary Fairchild in doubting, in his speech in Brooklyn the other night, whether the competitive system could be extended much further than it is at present, must have forgotten the Railway Mail Service and the Indian Service. Both of these are now exempt from the operation of the Civil-Service Law; both are, so far as the unofficial eye can see, just as fit fields for its operation as the Treasury or the Post-office, and both are suffering seriously, if not from their exemption from the rules, from the unchecked operation of the spoils system. We have never heard of any reason for exempting either of them. The work of the clerks in the Railway Mail Service is exactly like that of clerks in the post-offices. If there be any difference between them, it lies in the fact that the clerks in the Railway Service need better health, better eyes, defter fingers, and quicker perception and greater energy than the other Post-office clerks. They have not only to do much of their work at night, but have to contend, in sorting letters, reading addresses, and making up the bags, with the motion of the cars, and they have to display great promptness and despatch in putting out the mails at the various stations, and to be more than usually faithful and conscientious, because they are largely exempt from supervision or inspection and from the quick discovery of mistakes. If, therefore, the competitive system be a good way of discovering the best men for any department of the postal service, it is a good way of discovering them for this. If it be necessary in any department, it is still more necessary in this, because the duties are more wearing and responsible than in any other.

Nevertheless, the rules have never been extended to this branch of the service—why, we do not know. We have often inquired, but have never got any answer. In fact, this extension to the Railway Mail Service seems to be regarded in official circles at Washington as one of those things which it is elevating and ennobling to hope for and think about, but which it is useless to expect in a world as imperfect as this is. We believe Mr. Cabot Lodge some time ago introduced a bill in the House making the extension mandatory, but we have lately heard nothing of it, and fear it was intended rather to "make it hot for the Democrats," by calling attention to their enormities, than to curtail their powers of mischief. At present the general impression is, we fancy, both in and out of Congress, that the true reason of the exemption of this branch of the service from the rules was simply a desire, to use Tweed's expression, "to do something for the boys." That is, it was felt that it would not do to take the whole postal service away from the Congressional spoilsmen at once; that some residue of their old power would have to be left them, on the theory that they would not submit to total bereavement. But whatever the cause, the result is that the strain on the Railway Mail Service, considered as patronage, is greater than it was before there were any rules at all. That is, the fewer places there are left in which a Congressman can put his dependents, the more dependents he puts in each place. The situation is somewhat like that of a man who has been used to both whiskey and beer, and from whom the doctor has cut off the whiskey, and who accordingly trebles his consumption of the beer.

The same things may be said, *mutatis mutandis*, of the Indian Service. It, too, if any branch of the Administration needs the rules, needs them sorely. The duties are most responsible, and have to be performed where public observation or criticism of the manner of their performance is impossible. They need not only great intelligence, but very high character, and in some cases special training. In fact, the character and intelligence of men who represent a Christian nation in its dealings with helpless savages cannot be too high. If competitive examinations be a good mode of selecting men for responsible positions, the Indian Service is, in a peculiar degree, the place for it. If the surrender of any branch of the public service to Congressmen as spoils be objectionable anywhere, it is nowhere more objectionable than on the Indian reservations. All the arguments against it in any department apply to it with double force in this. Then why are Indian agents, farmers, and teachers not selected under the rules? We have never heard of any reason, and know of none, except the one we have suggested in the Railway Mail Service—a desire "to do something for the boys"—that is, leave some place where the Congressmen could revel in their old pastimes. The result has been that, owing to the fact that the Commissioner is a Tennesseean, the Indian Service is just now a sort of hunting-ground for the Congressmen of that State, as the Post-office Department used to be for the Indiana men in the old days of Morton and Brady. The Indians do not like it, and suffer from it, but the Indians do not vote or write for the press. Many of the results are discreditable and distressing, but the public does not see them, and has that fortitude under other people's woes for which even the meanest and weakest of us is distinguished.

THE INTERNAL REVENUE.

There is quite general agreement among the opponents of the Mills bill that instead of the reductions it proposes there should be a greater reduction in the internal-revenue taxes. This proposition is endorsed even by prohibitionists like Mr. Kerr of Iowa, and hence must be regarded by the party as its only escape, and may by outsiders be fairly held to be its settled policy. And it is to be further said that a number of protectionists have gone on the record, to which their constituents ought firmly to hold them, in favor of the total abolition of all internal-revenue taxes. The recent Congressional speeches in favor of such abolition are so numerous, and will be scattered so widely during the campaign, that we shall be obliged to pay some attention to them in order to keep abreast of the campaign.

Some indignantly deny that they propose free whiskey. What they do propose is, that the taxation of whiskey shall be left entirely with the States. They endeavor to win favor among their constituents by calling attention to the vast saving this would accomplish in local taxation of real estate and other taxable property. It affords them, in fact, no small bribe to offer to voters having heavy State taxes to pay. Herein lies its strength, but also its weakness, for there are several prohibition States where this bribe can have no force or value. Under their present laws Kansas, Iowa, and

Maine could get none of the surrendered whiskey revenue. Hence it is on other grounds and with other ends in view that such men as Kerr favor the abolition. Theirs is the high moral view, expressed in his speech, that it is a sin against heaven for any government, State, local, or national, to derive any revenue from the liquor traffic. So they will have nothing but absolutely untaxed whiskey.

Here, then, we have the two alternatives offered by the abolitionists—untaxed whiskey and State-taxed whiskey—offered by them; but what right have they to make the offer? The States must decide the matter, and the abolition of the national whiskey tax will place them under not the slightest legal or moral obligation to replace it with State taxes. If they did not do so, then prohibition would have hard sledding in the States where it has been adopted. With whiskey costing perhaps twice as much per gallon as it now costs per drink, and no Federal inspection, there would be no reason why any inhabitant of a prohibition State should go without it, or go far to get it; and especially since the Supreme Court, in the Bowman case, has opened wide the channels of inter-State transportation of such goods.

But suppose the States did undertake to appropriate the revenue lost to the Government by the abolition. How would that plan work? Could they agree among themselves, and make the tax everywhere equal? Think for a moment of the herculean task of bringing about this exact agreement between thirty-eight States, whose divorce laws, for an instance of something wherein they ought to agree, differ so widely. And remember that here there would be a heavy premium on bad faith in keeping the bargain. The State which first slightly reduced the tax, unless immediately followed by the rest, would gain in public revenue and in private manufacturing prosperity.

But suppose the agreement were kept. Suppose the State Government of each State collected as much tax on these articles as the Federal Government now collects within that State's bounds. What would be the share of each State in this mighty bribe which is offered them? Would there be any equality in the division? It is not hard to find out. Here are the internal-revenue collections in a few States for the fiscal year 1887:

Maine.....	$50,284	Mississippi.	$42,608
Illinois....	24,825,704	New York.	15,101,203
Vermont..	30,120	Alabama..	78,543
Kentucky.	12,417,530	Ohio.....	13,898,227

Illinois would get nearly 500 times as much as Maine, Kentucky 400 times as much as Vermont, New York 375 times as much as Mississippi, and Ohio 175 times as much as Alabama. Between these extremes the inequality would be as great as it possibly could be. How long would the States thus bled to gorge the treasuries of sister commonwealths cling to the arrangement? More than half the internal taxes of last year were collected in four of the States above named. The present Federal surplus is nothing to what theirs would be, and of course these hoards would be drawn from the States whose citizens consumed the goods—but not very long, for the simple reason that no such nonsense would be endured. It is bad enough to be contributing of one's hard earnings to a surplus of a common treasury; but pouring a surplus from one State into the treasury of another is certainly worse.

And there is no other way to avoid free whiskey, if the Federal tax is taken off. Unless the stuff is taxed in the State where it is made, it will flow unchecked and uncontrollable into adjoining States. There is no way to diffuse the tax geographically. At least, no advocate of the abolition has yet proposed one worth considering.

CHILI'S COMMERCE AND FINANCES.

THE last report of the Chilian Secretary of the Treasury serves to accentuate freshly the astonishing commercial advance of what is now, in many respects, the most vigorous and powerful of the South American nations. This advance may be summarily indicated in the statement that, during the last ten years, the country's revenues and foreign trade have each rather more than doubled. The Government, which in 1866 could count upon an income of but little more than $9,000,000, and in 1877 upon one of a little under $17,000,000, can now bring in estimates for 1888 of $32,439,736, and can point, at the same time, to a probable surplus of over $11,000,000. Foreign commerce has for some years reached a total of over $100,000,000 annually, as against $40,000,000 to $60,000,000 for the twenty years prior to 1872. Recalling the comparatively small population of Chili—probably still under three millions—the scale of commercial activity denoted by the figures now given is such as undoubtedly to put Chili at the head of all Spanish America, if not of the entire Latin race, in point of the proportion of foreign commerce to inhabitants. Indeed, we doubt if any nations except Great Britain, Belgium, and Holland surpass her in this respect.

The financial status of Chili is shown with sufficient clearness in the important operations of funding the foreign debt which have been recently consummated. Like most of the other South American republics, Chili had contracted a long series of foreign loans of various amounts and at varying rates of interest. These have now practically all been funded in a new issue of $30,000,000, taken by the Rothschilds, in February, 1886, at 96, with interest at 4½ per cent. The remaining foreign indebtedness brings the total up to $34,601,270, as the account stood at the beginning of 1887. To this must be added a domestic debt of $49,223,429, estimated in paper money, involving an annual interest charge of something more than $2,000,000. This is relatively a large debt, incurred, in great part, for the execution of the vast schemes of public improvements upon which Chili had already entered before the long war with Peru and Bolivia put new burdens upon her. That she will be able to carry them all seems to be the judgment of the money-market, always the best test of national credit.

The revenues of the Government are derived from customs duties, both import and export (the latter principally on saltpetre), from the railroads and telegraphs under public control, from taxes upon incomes, legacies, and land, from patents, sales of public lands, guano, etc. The complicated system of internal taxation is highly burdensome, and with the tariff laws calls urgently for revision, which the Government is anxious that Congress should at once set about. The estimated income for 1888 is $36,000,000, which, with a surplus of $8,000,000 carried over, will put at the disposition of the Government $44,000,000.

An analysis of the foreign trade of Chili, with an eye to determining our share in it, can only result in the same mortifying showing that we make in the commerce of all Central and South America. We have, in fact, had no part at all in the wonderful commercial expansion of Chili. Our trade with that country stands almost at the same figures which it had reached in 1860; and whereas our trade of about $4,000,000 then represented 10 per cent. of the total foreign commerce of Chili, now it stands for less than 4 per cent. In our studied indifference to all "abroad," we have sat idly by to see ourselves distanced even in those articles of manufacture in which we have boasted that we were unexcelled—Germany, for example, selling Chili, in 1882, $109,000 worth of sewing-machines to our $7,000, $112,000 worth of pianos to our $7,000, $234,000 worth of boots and shoes and $500,000 worth of candles, while we sold not a dollar's worth of either. The figures for 1886, as given in the 'Estadística Comercial' for that year, do not materially differ from those just cited. In all the great manufactures, in iron, cotton, and woollen, even in machinery and railroad materials, we are hopelessly beaten by England and Germany. In lumber we head the list, simply because our rivals have none to sell; as we do also in petroleum.

The current tariff discussions have made the reason for this state of things abundantly clear, as also its remedy. Roving commissions to "investigate" the state of our trade in South America can accomplish little. We observe that Mr. Hopkins, in his recent address before the Chamber of Commerce, asserted that the last one did American interests more harm than good. Nor can much be expected from Pan-American Congresses, in the line of the pending McCreary bill. This is clear from the nature of the references to that measure in the Spanish-American press. Its political aspects, its aim to promote a solidarity of feeling and community of aspiration among the American republics, meet hearty sympathy; its commercial bearings are looked upon with either disgust or ridicule. Indeed, the great republic of the North is regarded with a strange mixture of sentiment throughout all Spanish-speaking America. There is pride in her history and development, a desire to copy her institutions, and eagerness to keep step with the march of her civilization; but there is amazement at her commercial folly—seeking to get everything and give nothing—and laughter at the appeals we make to the

pockets of the Hispano-Americans in the name of their patriotism.

THE ENGLISH EXCHEQUER OF THE JEWS.

A LEARNED and interesting lecture on "The Exchequer of the Jews of England," which Dr. Charles Gross, a young American scholar, delivered in London last June, is published from the office of the (London) *Jewish Chronicle*. The Exchequer of the Jews was a branch of the great Exchequer of England, and was wholly devoted to the affairs of the Jews. It is referred to by Green, who mentions that Richard I. organized a mixed court of Jews and Christians for the registration of their contracts; and by Hume, who says that the revenue arising from exactions upon the Jews was so considerable that there was a particular court of exchequer set apart for managing it. Not quite so scant a notice may be found in an elaborate treatise on the modern history of the Jews, contributed in 1850 by Selig Cassel to Ersch and Gruber's 'Encyklopädie' (section 2, vol. xxvii, p. 117).

Dr. Gross derives his materials at first hand from researches in the Public Record Office, and even one of his printed authorities, Prynne's 'Demurrer,' is not mentioned at all by the writers named above. He is thus able to present many details which are not otherwise easily accessible, and which are full of interest to the student of history. He is led by his investigations to infer that the Jewish Exchequer was not established until nearly the end of the twelfth century, which would limit its existence to a hundred years, as the Jews were expelled from England in 1290, and were not permitted to return until the time of Cromwell. The position of the Jews in England in the Middle Ages was much the same as on the Continent. They had no legal status. As Green says, they were simply the king's chattels, and their lives and goods were at the king's mercy. Dr. Gross makes the surprising statement that the kings of England posessed greater power in this regard than the rulers of France and Germany. We read in Hallam that the policy of the kings of France was to employ the Jews as a sponge to suck their subjects' money, which they might afterwards express with less odium than direct taxation would incur. In like manner the German emperors, particularly Louis the Bavarian, and Charles IV., in public rescripts expressly declared that the lives and property of the Jews were theirs, to dispose of as to them seemed good. Any pretext was good enough to justify this pretension; but, however the pretexts may have varied in various countries, the practice was everywhere the same. The actual fact was, that the Jews needed the royal protection from indiscriminate spoliation, and had to accept the comparatively discriminating spoliation of the kings as the lesser of two evils. Whatever little was thus left to them was so much clear gain.

Although they were grievously oppressed and robbed, there was occasionally a monarch who took a little pity on their distress and showed that he felt some slight qualms of conscience. Hume relates that in 1255 the Jews, worn out with their sufferings, besought Henry III. for permission to retire with their effects out of the kingdom. The King replied, "How can I remedy the oppressions you complain of? I am myself a beggar. I owe above 200,000 marks; and if I had said 300,000, I should not exceed the truth; I am obliged to pay my son, Prince Edward, 15,000 marks a year; I have not a farthing, and I must have money, no matter where it comes from or how." He then sold the Jews to his brother Richard, Earl of Cornwall, in order, as Matthew of Paris says, that those whom the one brother had flayed the other might embowel. It is gratifying to know that Richard took compassion on their poverty.

The Exchequer of the Jews was an ingenious device for enabling the kings of England to levy contributions upon the property of the Jews. Its principal officials were stationed at Westminster, and were known as "Justices of the Jews," or "Wardens of the Jews." They varied in number from two to five. They were barons of the Exchequer, and were appointed by the king. There were also subordinate officers, such as a keeper of the rolls and writs, an escheator, and clerks. The "Presbyter of all the Jews of England," who seems to have held his office for life, was also an officer of the Jewish Exchequer. Dr. Gross conjectures that he scrutinized and verified doubtful Hebrew contracts, and would be appealed to by the Justices for information concerning disputed points of Jewish usage. All contracts between Jews and Christians had to be made in writing in the presence of two Jews, two Christians, (these being the four chirographers), two scribes and two clerks. The charters or acknowledgments of debt were in the form of a chirograph, *i. e.*, two duplicate deeds written upon one membrane, afterwards severed into two parts along an indented line, dividing horizontally the word *chirographum*. The part with the seal of the debtor remained in the hands of the Jew; the counterpart was deposited in the common chest or ark, which had three locks, the two Christians keeping one key, the two Jews a second, and the two clerks a third. There were also three seals distributed in like manner. When the debt was paid, the Jew wrote out a release or quitclaim, on presenting which to the custodian of the chest the debtor received the counter-chirograph duly cancelled. If the counterfoil of an obligation was not deposited in a chest of the chirograph, the Jew could not lawfully claim the money due him; if he released the debtor privily, *i. e.*, without giving notice to the chirographers or to the Justices of the Jews, the debtor could be called upon to pay a second time. In order to sell or transfer a debt, it was necessary for the Jews to secure permission from the King.

It will be seen that this system has some resemblance to our present system of recording deeds and mortgages and satisfactions of mortgages; and it may be that it was originally designed to serve a similar purpose, and to prevent Jewish creditors from claiming more than was justly due them, or Christians from evading the payment of their just debts. So far as it performed this function it was perhaps beneficial to both parties, and particularly to the Jews. But it developed two other very important functions: it enabled the kings to gauge the wealth of the Jews, and, secondly, to collect the contributions which they did not pay willingly.

The chief source of crown revenue from the Jewry consisted of tallages, which were arbitrary taxes levied at the pleasure of the king, and sometimes amounted to enormous sums. It is generally said that King John once wrested from the Jews a sum equal to a year's revenue of his realm. If any one refused to pay his tallage, or perhaps only the last instalment of it, it was the custom of the Exchequer functionaries to confiscate the debts that were due him. When a tallage was contemplated, delegates of the Exchequer went to the various towns where chests of chirographs were kept, and made an inventory of all the obligations found therein, which were afterwards entered in the rolls of the Justices of the Jews. Occasionally even the chests themselves were brought to Westminster. These lists served to give the King a clue as to the tallageability of the Jews, and afforded him a means of compensation in case they did not pay the impost. The chirographs of confiscated debts were sent from the local chests to Westminster, where the debtors came to liquidate them and to secure the cancelled obligation. A similar proceeding is not entirely unknown to a generation still upon the stage. In 1860 the Confederate States Government declared all debts due by Southern merchants to their Northern creditors confiscated, and called upon the debtors to pay the money into the public treasury, thus taking a leaf out of the book of the English kings of the thirteenth century.

Besides its fiscal functions, the Jewish Exchequer was the court that tried all civil and criminal actions in which a Jew was concerned. Its jurisdiction was exclusive, other courts being warned not to interfere with pleas belonging to the Justices of the Jews. Dr. Gross declares that on the whole it redounded to their benefit, and was the ægis of Israel against excessive popular and baronial violence. It accorded them more justice than they could have expected from the local civil and ecclesiastical courts. On the other hand, he says (and his view seems a correct one) that the constant confiscations by the Royal Exchequer of debts due to the Jews added greatly to the hatred of the Jews that culminated in their expulsion. It seems very likely, indeed, that the great barons who owed money to the Jews, much preferred to deal with a class of creditors whom they could browbeat or cajole by turns, and placate by a payment on account, rather than face the monarch whose need of money was pressing, and who had the means of enforcing his demands. In Magna Charta, King John agreed that, if a debt should happen to fall into his hands, he would not take more than the property pledged in payment of the debt. In 1257 the petition of the barons prays Henry III. to remedy the grievance that the lands of wards, pledged to the Jews for debts, fall into the hands of the great men of the realm, who will not give them up again, even when payment of the debts is offered.

Dr. Gross concludes with an appeal to the Jews of England to give to the world the still unpublished records of their past by printing a selected portion of the rolls of parchments in the Public Record Office containing the memoranda and transactions of the Justices of the Jews. Of these there are some 122 rolls, consisting of about 720 membranes, of which the average size is about two feet long and eight inches wide. His testimony to their great value as affording material for Anglo-Jewish history will be readily accepted by his readers, and it is to be hoped that his suggestion will be followed up. If an occasion of this kind presented itself to the public-spirited and wealthy Jews of New York, it would be improved without delay.

THE PAPAL RESCRIPT.

DUBLIN, May 11, 1888.

FOR many months it has been felt that some definite expression of opinion on Irish affairs was impending from the Vatican. British influence was evidently being exercised to this end. Few, however, were prepared for the rescript that has reached us, containing such a complete condemnation of the Plan of Campaign and boycotting, untempered by any expression of sympathy, which would have seemed so natural,

towards the Irish movement in its general drift and character. So momentous a step was not taken without full consideration. Monsignor Persico, on whose impressions the rescript was probably formulated, was in Ireland for some time; he associated with all classes, consulted men of every shade of opinion, and, I believe, made every effort to arrive at fair conclusions. Yet, if we are to judge by the rescript, he has not grasped the salient points of the situation, a failure which would not be surprising in any stranger after a few months of personal inquiry into the affairs of any country. A bare condemnation of some of the means used to advance the cause is a poor result of studying the enigmatical Irish question by an authority so deeply interested in its solution as the Vatican. This is but another, added to the innumerable instances that might be cited, of the mistakes made in supposing that difficult political and social problems can be best studied on the spot. Carried away by individual cases and experiences, the inquirer loses sight of those general principles and considerations which afford the only clue to a just estimate. Prof. Cairnes's conclusions regarding the principles really at stake in your war of the Rebellion, arrived at in the seclusion of Trinity College, Dublin, after consulting those who had devoted their attention to American affairs, and studying writers and thinkers on both sides, were far more correct than they would have been if derived from a brief sojourn at the seat of war.

The rescript virtually requires the Irish people to surrender at discretion. The Plan of Campaign might be abandoned—it never had Mr. Parnell's full approval, and has always been somewhat doubtfully accepted by thoughtful men; but to receive into Christian fellowship those "who in the exercise of their right take vacant farms," and those who support the Government in the present conflict, would be to abandon the very key of the position. That Monsignor Persico should arrive at any other conclusion was not likely. The envoy is an ecclesiastic. The Vatican regards everything from an ecclesiastical point of view. Men and nations are important to it only in so far as they affect the supremacy of the Church. Leaving his own country covered with the wrecks of suppressed monastic institutions, a country where ecclesiastics are fettered in many ways; where, if we are to judge by such books as Garibaldi's 'Memorie,' hatred of his order has deeply penetrated large classes in the community—Monsignor Persico comes to Ireland to be fêted by high and low; to find the progress of that order entirely unimpeded; to see splendid monastic institutions rising on all hands; to find industrial and reformatory establishments managed by ecclesiastics enjoying large and increasing Government grants, practically uncontrolled in their application; to find the Government, the representatives of the class in England hitherto most opposed to Catholicism, ready to promise anything if only agrarian and political turmoil were subdued; to find also the Irish people as Catholic as possible, and Catholicism in the dominant country—largely through the influence of men like Cardinals Newman and Manning—more respected than ever before since the Reformation. Perceiving all this, could he conclude otherwise than that a cessation of the present struggle would be desirable?

Probably neither he nor the Vatican was prepared for the spirit in which the rescript has been received. The bishops have not yet spoken, but, whatever attitude they take up, can hardly materially influence the situation. The Unionists have performed a complete volte-face regarding the Papal supremacy. "I am beginning to think that we Protestant home-rulers are the only Protestants left in Ireland," writes an Episcopal clergyman from the south. "Where am I at all?" said another of the same cloth in my hearing. "Am I a Catholic or am I a Protestant? Where am I to go to seek spiritual consolation—to Rome, to my Primate, or to the Presbyterians? I wonder could the Quakers give me any?" A portrait of his Holiness is advertised as exhibited by the chief Conservative print-seller in town. A Unionist comic paper has a cartoon this week in which Erin is depicted taking refuge on a chair from a swarm of cockroaches, "Dillon," "Davitt," "Parnell," "Gladstone," "Home Rule," etc., while his Holiness as St. Patrick, an aureole round his head, deluges them with scalding "Pope's decree vermin-killer," and comforts her with the words: "Have patience, Erin, and I will rid you of the wretched vermin."

On the other hand, the Catholic representatives of public opinion meet the rescript in a spirit of most determined opposition, which, in any other cause, would have the sympathy of all Protestants, supposed lovers of liberty and independence. The *Freeman's Journal*, after an elaborate inquiry into "What the decree really is," concludes that it is binding only in so far as the supposed facts on which it is based are true; that the Plan of Campaign is condemned by the rescript only where the rent objected to "has been fixed by mutual consent," and where the law courts have afforded an opportunity of their being fixed "within the limits of equity"; and that boycotting is unjustifiable only where it has proved "a new form of persecution and proscription, ruthlessly put in force against persons who are satisfied with, and are prepared to pay, the rent agreed on with their landlord." *United Ireland* is more emphatic:

"Their position [that of the Irish people] now is simple. They will regard this pronouncement of the Fathers of the Inquisition as a pious opinion founded upon grotesquely fallacious premises, and draw a salutary warning from it of the dangers of coming to conclusions upon imperfect and misleading information. . . . This circular will pass, like the one six years ago [that fulminated in vain against the testimonial to Mr. Parnell], without making more than a momentary ripple on the consciences of the Irish people, and yet without impairing in the faintest degree their respect for the authority and wisdom of the princes of the Church."

The last reservation is as puzzling to some Protestant minds as are the sentiments with which the paper begins the consideration of the subject:

"Divine it [the Church] is, and perfect, informed with the Wisdom and the Spirit of its Founder, the Rock of Ages, the Lamp of Truth, the Refuge and the Ark of fallen human kind. The Church never makes mistakes; its human engineers sometimes do. The Divine Inspiration cannot err; the clerks, the secretaries, the dignitaries, the individual human beings who man its bureaus, can err just as freely as any other men."

John Dillon is clearer:

"It does seem to me a curious thing that one of the great grounds on which we decline—and I think justly decline—to be ruled from Westminster is that we object, as every people in the world who have ever tasted of liberty, or who have any self-respect, object, to be ruled by men in temporal concerns who don't understand the circumstances under which they live. And are we to be told that while we struggle and make sacrifices, and have maintained for years the desperate strife against a foreign rule at Westminster, we are to submit or accept the foreign rule of a number of Italians in Rome, no matter how holy they may be? It is a monstrous doctrine; it is a doctrine which, I venture to say, the authorities in Rome will never attempt to maintain, and which, if they did attempt to maintain to-morrow, the Irish race would stand up like one man and refuse to submit to it. No, the Irish people have shown, as I contend, in the face of almost unparalleled difficulties and sufferings and dangers, that the sacred cause of liberty is as dear to them at least as to any other race of men who inhabit this earth. They have shown that they will submit to no foreign domination on the soil of Ireland. And while we have shown in the past, and shall show in the future, a devotion to the Head of the Church in whose doctrines we have been reared, and our fathers before us, which will compare favorably with the devotion of any of the great Powers of Europe, or of our friends the English Catholics, we will show also, I trust and believe, that we know what liberty means, and we know how to draw the distinction between devoted obedience to the Church in spiritual matters and absolute independence of everybody except the Irish people in temporal matters. . . . The people of Ireland would be idiots if they dropped these weapons. No one who has not lived among the people of Ireland, no one who has not Irish blood in his veins, and who has not been born and bred up among the circumstances in which we are placed, is fit to judge of the policy which the Irish people should follow and adopt."

These, and similar pronouncements from other leading Catholic speakers, have been received with vociferous applause by the assemblages addressed. They show the spirit in which the rescript will probably be regarded by the Irish people in the main, while there are, of course, many Catholics outside or on the borders of the National ranks inclined to say, "We told you so," and who will accept it much more literally and obediently. On the whole, the incident will be beneficial. William O'Brien and John Dillon meant only what was right and just in promulgating the Plan of Campaign; as worked by them directly it was used only in cases where a desperate remedy was needed for a desperate position. But the promulgation established a dangerous principle, and conduced to aggravate the tendency, already too rife here, to harry all landlords, good and bad, and to render as difficult as possible the collection of all rents, however moderate. So with boycotting. There is every difference between the social ostracism of those who take farms from which have been evicted tenants willing to pay just rent, and "boycotting" as practised in Kerry, where harmless men are shot down in the midst of their agonized families by cold-blooded ruffians, and where those who have helped in the slightest degree to convict the criminals are shunned like lepers. The rescript will compel the people at large to consider their ways more narrowly than they have heretofore done, and will prevent the clergy from following too blindly and invariably the prejudices and passions of their flocks. Moreover, it will further the cause of Home Rule in England, by tending to dissociate from it the idea of Rome rule. In the interests of liberty and independence of judgment all the world over, it will have good effects. While not rendering the Irish less Catholic in all that is best in Catholicism, it must help to undermine their theoretically implicit submission to the Vatican as a power in the ordinary affairs of life. John Dillon's indignant denunciation of foreign domination cannot be taken to apply only within the four seas of Ireland.

Seldom were the Irish people calmer, more resolute and determined than they now are. Their national cause has shed much that was base, and is being urged upon a distinctly higher plane, which facilitates its being further joined and influenced by the noblest and purest minds in the United Kingdom. This tendency was strikingly illustrated by the proceedings at the Eighty Club the other evening, and especially by Mr. Parnell's speech. D. B.

—Since the foregoing was written, a letter

has appeared from Archbishop Walsh, the most responsible Irish ecclesiastical politician. It is dated from Rome last Monday. In it he says (the italics are his own):

"The Irish people, whether at home or abroad, will, I trust, accept my assurance that neither the Nationalist movement nor the National League is in the smallest degree injuriously affected by the recent decree. Beyond this I do not wish to go. As no one would be justified in supposing that the Irish cause is even indirectly censured by the recent act of the Holy See, so neither should we be justified in asserting that the Holy See was influenced in it by a desire to hasten on the triumph of our great constitutional movement. *But that this will be the necessary result of what has taken place, I, for my part, have not the shadow of a doubt.*"

THE NEW GALLERY.

LONDON, May 11.

THE opening of the New Gallery on the 8th inst. by invitation to a very crowded private view, and on the 9th to the general public, has been anxiously expected by artists and lovers of art as an event of the greatest importance. All doubts and fears as to the success of this undertaking are now at rest, and have given place to the unlimited satisfaction of artists, critics, and society in general.

All praise is due to Messrs. Hallé and Comyns Carr, the directors, who, in the incredibly short space of three months, have erected the most delightful picture gallery we have yet seen in London, and they are to be congratulated on their courage in carrying on their work in the face of so many difficulties and doubts and such half-hearted support from many of the artists themselves. It is true that they had the entire sympathy of Burne-Jones, Watts, and Alma-Tadema, and the certainty of their sending all the work they could have ready and could dispose of to the new exhibition, although the latter two were under the obligation to send to the Academy also. J. E. Millais, Holman Hunt, W. B. Richmond, A. Parsons, Onslow Ford, Giovanni Costa, M. R. Corbett, H. Herkomer, and A. Legros also promised pictures, although they determined at the same time to give some of their work to the Grosvenor and to the Royal Academy. It was feared by the pusillanimous that the three exhibitions could not flourish at the same time, and that to compete with the well-established Grosvenor Gallery would be more than rash. Perhaps under better management the Grosvenor might have been a formidable rival, but now that the three exhibitions are open, the artists who chose to remain faithful to Sir Coutts Lindsay are very indignant at the want of courtesy and discrimination shown them in the hanging of their works, and also at the exclusion of certain pictures at the last minute which had been personally chosen and solicited by the director himself. Complaints are very general on those grounds, and not a little surprise is expressed at the lack of management and of common politeness, in such strong contrast with the treatment received in former years.

The entrance of the New Gallery is in Regent Street through a narrow passage (which we hear is to be converted into a more appropriate entrance), to a beautiful marble hall of *giallo antico*, round which runs a gallery supported by columns of cipollino marble; a fountain plays in the centre, and shrubs and plants in groups serve to set off the sculptures in marble and bronze here displayed. This hall is of very charming effect, both in color and arrangement: the balustrade running round it, at present gilt and ordinary in design, is to be changed for small columns of alabaster ornamented with gold. From below, one sees the water-color drawings, pastels, and silverpoint studies in the balcony, hung on a background of gold Japanese paper.

The chief pieces of sculpture are Prof. Legros's "Young Satyr," exquisitely modelled and executed with great knowledge and ease; Mr. Swynnerton's large design for a fountain; Mr. Bates's "Peace and War"; a dead Christ bas-relief in bronze by Miss Elinor Hallé; and a small statuette of the "Mower," by H. Thornycroft, with many interesting busts and medals.

On entering the west gallery the work of Burne-Jones faces us. Those who are in sympathy with his pictures are unanimous in declaring that he has surpassed himself in producing the most exquisite piece of pure bright color in his "Danaë and the Tower of Brass"; the most powerful of all his designs in "The Doom Fulfilled," besides the most perfect drawing of the nude in both the figures of Andromeda. In the first of the series, "The Rock of Doom," the maiden is chained to the rock near the shore, expecting her death, while Perseus, passing in the air with his winged sandals and helmet of darkness, first sees her. The action of Perseus exactly expresses that he is independent of any firm footing: he just skims above rock and sea, his feet nearly touching them—his handsome face full of surprise and devotion as he gazes at the maiden whose timid, resigned look answers his. Joppa is the background—very gray, with sober bits of green cliff between; the sea is blue-green; Perseus, in sombre armor beautifully designed, serves as a foil to the ivory pallor of the naked Andromeda. The idealization of the female form is very successful, and a study for this figure in the gallery above, and others for Perseus's armor, show how thoroughly this master prepares himself for every part of his design. There is no bright color anywhere, and yet the whole work is quite powerful and harmonious. In the companion picture, "The Doom Fulfilled," Perseus is slaying the monster after having fought with it. The long, dark-green, slimy dragon is a wonderful invention. In its coils Perseus is balancing himself while he is prepared to strike the cruel head still hissing defiance at him. The maiden, seen from behind, chained to her rock, which makes the background to the coils of the dragon, is anxiously watching the combat. The design and carrying out of every detail leave nothing to be desired, and the sombre color harmonizes perfectly with the character of the subject. Between these two Perseus subjects is placed the taller picture of "Danaë and the Tower of Brass." The slim, fair-haired maiden, clad in a closely pleated inner garment of purple, with a drapery of bright crimson wrapped round her, stands beside a dark cypress tree. Her pale face looks startled and full of foreboding of a disastrous future, as through an open bronze door she sees past the cool courtyard a troop of workmen erecting a brazen tower, already well advanced. King Acrisius stands among them urging them to activity. It is in this picture that we have all the magic power and intensity of color of the earlier work of this great painter, combined with all the delicate, sensitive workmanship of these later years. Every inch of canvas is exquisitely finished: the deep-blue flags in the foreground, the paving-stones of the yard beyond, the cypress tree, and the blue-green bronze door—all are treated with minute skill, forming as a whole a delightful harmony.

Immediately opposite to Burne-Jones is Legros's "Femmes en Prière," a very perfect work, and we greet with delight the appearance of this painter after several years of absence from exhibitions. Here we have austere tints of gray, black, white, and flesh-color in the kneeling figures of the praying women, of whom the one in front holds a lighted taper. Their faces, framed in white caps, have the innocent, healthful charm of village life. The painting is throughout very masterly, especially in the treatment of the masses of warm black in the women's cloaks. There is also a "Dead Christ" by Legros in this same room, less interesting as a subject, but, for its knowledge of anatomy and in its appropriate realization, equally fine. Holman Hunt exhibits a portrait of a gentleman, careful and hard and metallic in execution, as most of his recent work is. In G. F. Watts's "Angel of Death," No. 30, we see a grand, powerful figure in slaty gray, with head swathed in white, the figure encircled by strong black wings, holding in her lap a dead baby, whose face her hand hides from our view. The angel, in her whole attitude, expresses consolation and tenderness rather than relentless power. The execution is in Watts's best manner, with the peculiar charm of suggestiveness which he considers appropriate for allegorical subjects, though the baby seems scarcely enough carried out, its hands being hidden in the angel's lap without sufficient reason for their disappearance. Although not one of his best works as a whole, this is a very characteristic one, and bears the magic touch of true genius.

Among the imaginative works must be mentioned Mr. J. M. Strudwick's little picture of "Acrasia." The knight, in beautifully designed armor, sleeps in the "bower of bliss." He has been pelted with roses, and is lying in the shade of an apple-tree, through whose branches beautiful girls, in closely pleated white draperies, are seen watching his slumbers. One, who plays on a lute, is probably intended for Acrasia, the "false enchantress" of Spenser's tale. This work of Strudwick's carries perfection of finish and design to the very highest point, and yet, although each leaf of the apple-tree is most carefully drawn and studied, as also each plant among the grass, the whole is perfectly in keeping, and has a misty feeling of dreamland in its wan color, a perfume of romance and the ideal world, strongly differing from its impressionist neighbor, "Homewards," by E. Stott of Oldham. Nothing could illustrate better the unsatisfactory nature of exhibitions than the proximity of these two works, as different in aim as in manner. Mr. Stott's early spring-green landscape, with a rosy-cheeked ploughboy driving calves beside a stream, makes Strudwick's work look colorless, while Mr. Stott's study looks too crude and sketchy beside this highly finished picture. Even the best intentions to hang everything most advantageously must fail somewhere, and I only mention this instance as an example of the disappointment a painter feels at an accident which lessens for the time the value of his work.

Sir John Millais sends two female studies, the one, No. 99, "Forlorn," very garish in color. A maiden, leaning on a balcony on which is thrown a Persian rug, looks far away towards an evening sky, with distant country. Her dress is red, and hastily painted in streaks; her face is of a chalky white, with carmine cheeks, quite out of harmony with the background. "The Last Rose of Summer" (No. 157), in the same room, is more carefully painted, though lacking any definite intention, as do most of the works of this master of late years. A girl in a dark-red cloak over an orange-colored skirt, with a broad-brimmed black hat, stands before us, holding a rose; the background is distant

gray sky. It is a pleasing and forcibly painted portrait of the model, and that is all.

Tadema has sent five works, but of these only one (No. 131), "He loves me, he loves me not," gives an adequate idea of his skill. This artist always seems to us at his best in his smaller canvases, and this one, for freshness of detail, clever painting, and grace of arrangement, leaves nothing to be desired. Two girls, in their clinging draperies, are lounging on a couch, while one of them pulls a marguerite to pieces. The window behind them is open, and between the blind and the window-sill one sees the tops of temples and palaces and bits of gardens and trees. In the room all is cool and subdued, but beyond the fierce light of a southern summer touches everything. In "Venus and Mars" we have a small child in a pink-red shirt, holding a toy; behind him is the inevitable white marble balustrade, beyond which is a vividly blue sea. The oyster-shells on the ledge are very perfectly painted, but the *tout ensemble* is decidedly unpleasant. The sketch for the "Heliogabalus" now at the Academy, and two portraits, which look true enough to nature, but have no living quality, complete his contributions.

Mr. C. E. Hallé, the director, exhibits a large picture of "Paolo and Francesca," a well-worn theme, which he has treated with more movement and expression than we are wont to expect. The lovers are in a garden, the book is falling to the ground; Paolo, on his knees, is clasping Francesca's hands; her face is full of ecstasy. The draperies are harmonious in color; in the foreground a tiny fountain plays, and we cannot help finding fault with its miniature dimensions, which must strike the most unpractised eye as serving neither for use nor for beauty. Mr. Hallé sends also a portrait of the late Stephen Heller, the delightful pianist and composer, and a lady's full-length portrait, as refined and graceful as his portraits of women always are.

There is no lack of portraits at the New Gallery. Herkomer, Holl, E. A. Ward, Fairfax Murray, John Sargent, Shannon, John Collier, Mrs. Swynnerton, and W. B. Richmond, all have exhibited, and most of them more than one. They are generally good examples of their different manners, but no one has shown so many and such thoroughly good works in this line as W. B. Richmond. His portrait of Miss Gladstone (for Newnham College) is admirably painted. The lady looks austere and dignified; the color of the dress is a subdued dark red. Sir Edward Malet, in full court dress, is also a very interesting work by the same artist. Mrs. Andrew Lang and Mrs. Cunningham Graham are excellent, both in tasteful arrangement and in the care with which all the detail is painted and chosen; but most delightful of all is the portrait of Mrs. Drummond. This lady wears a dress of dull heliotrope-colored brocade, the background being dark blue. The movement of figure and hands is very graceful, and the pale, expressive face turning towards the spectator seems about to speak. No wonder that Mr. Richmond is so popular as a painter of fine ladies, for he spares no pains to make each portrait a picture which will always be interesting even when the likeness will count for nothing.

I pass by many large compositions filling up spaces on the walls, because they seem deficient in interest and ordinary in treatment. The landscapes are very good and of every variety. The poetic school is well represented by Giovanni Costa of Rome, No. 77, "The First Smile of Morn," by M. R. Corbett, who also sends a morning effect of sunlight striking a pine wood —an Italian landscape of great beauty. Mark Fisher sends spring effects, with the exquisitely dappled sky which is his specialty. G. H. Boughton's "Harvest of the Dawn" represents him fairly well: the mushroom gatherers are rather dull-like in action, but the landscape has more color than most of his later work. William Padgett and David Murray send many canvases of merit, and Arthur Lemon, compositions with centaurs of remarkable imaginative power. In "A Struggle," No. 48, two centaurs are wrestling near the sea on a dreary cold wave-beaten shore; in "A Vendetta," the scene is in a forest glade beside a pool: the centaur has been struck by an arrow, and is this time struggling with death. The composition of the landscape and its color are very fine.

There is no space to write of the water-colors in the balcony and the silverpoint drawings and studies for pictures, although they form an interesting feature of the exhibition. I hope that imaginative art may have found encouragement and a just appreciation in the New Gallery, and that this new venture may prove as successful as it promises to be. The system of hanging each picture with a space between it and its neighbor, which has been adhered to, is much to be commended. The walls are covered with National Gallery red flock paper.

Correspondence.

A SWISS POPULAR ASSEMBLY.

To the Editor of The Nation:

Sir: Some time since you published an interesting account of some researches made at the City Library of Trèves by Mr. George L. Burr, Instructor in History in this University.

I now send an extract from a letter recently received, giving an account of his visit to the Landesgemeinde of Canton Appenzell, thinking it may interest your readers, as giving an example of democratic procedure, pure and simple.—I remain very truly yours,

Andrew D. White.

Cornell University, May 22, 1888.

"We were welcomed at the home of Oberrichter Sturzenegger, and given a window which looked out directly into the great square, into which the twelve thousand odd voters were closely packed. All came *anständig gekleidet*—as the law provides—in solemn black, and with the swords of their ancestors at their sides. At the appointed hour of eleven, the Landammann (no longer Colonel Roth, who has claimed the exemption from the burdens of office to which every functionary is entitled at the end of six years), the six other members of the Regierungsrath, and the Land-Weibel, or crier, were escorted with great ceremony to the platform which stood near one end of the square. The proceedings were opened by a moment of silent prayer, and by a national anthem which was sublimely sung. Then the Landammann delivered an address which, judging by its reception, must have been eloquent, though at our distance I could hear only occasional sentences. Thereupon the assembly proceeded to its first order of business—the auditing of the year's accounts. The question was upon their acceptance as correct, or the appointment of an auditing committee, and they were accepted outright by an enormous majority. Never have I seen a more curious sight than the coming up of all those white hands out of that black crowd. Next came the election of officers. The question was first put always upon the *re*election of the present incumbent; and in every case the reëlection was almost unanimous—a fact which is perhaps less surprising when one remembers that the highest salary paid to any public official in Appenzell is two hundred francs a year—the judges of its Supreme Court get six francs a day, but only during the session. As Judge Sturzenegger laughingly said, it is the way the canton manages to lay a tax on brains—for every man elected is bound to accept or move out. He added that there is at present in the canton only *one* regularly educated lawyer, and he has to eke out an existence by keeping a *Wirthschaft* besides.

"Funnily enough, only over the unimportant but noisy office of Land-Weibel was there a sharp contest. As the chief qualification is a stentorian voice, each of the candidates was required to recommend himself to the voters in a short speech, and you can think of nothing more comical than this competition; for, whether the aspirant piped or roared at the outset, he always ended in a squeak.

"The manner of taking the votes is singularly fair to minorities. We had occasion to note this, especially in the filling of the two vacancies in the Regierungsrath. A mass of nominations were made, and taken down in writing. Then the question was put separately on the name of *each* candidate. From these the *two* who had received the fewest votes were now eliminated, and the question taken on each of the remainder, and so on until only two were left, when the decision was, of course, apparent, though more than once the vote had to be taken over and over before the Landammann would trust his eyes to declare it. On the announcement of the final vote, the position of the successful candidate in the crowd was shown by the thrusting up of all the swords in his vicinity, and the band sallied forth to escort him to the platform. For the second vacancy the question was then put again, as before, upon all the candidates but the elected one.

"After the elections came the legislation. Only three bills were submitted. The first, the repeal of a practically obsolete law for the guarantee of cattle, met with no opposition. The second, the proposed forcible closing of the *Wirthschaften* at twelve at night, was rejected by a considerable majority. The third, providing that even *resident* peddlers should pay a license, and that a license—not yearly, as with us, but once for all, at the opening of the business—should also be required of the keepers of *Wirthschaften* (a bill, that is, to abridge the right of every citizen to peddle or sell wine as he pleases), was in both its clauses voted down overwhelmingly. The defeat of these measures was explained to us, and I think justly, as proceeding far less from any opposition to the ends they sought than from suspicion and impatience at their encroachment upon personal liberty.

"The business being ended, there remained only the oath. It was read solemnly by the venerable clerk, and taken first by the Landammann. Then, with bared heads, and three fingers lifted high in air, that army of freemen listened to its terrible clauses of vow and imprecation, unchanged from the Middle Ages, and rumbled with one voice its repetition of them. No man dared be silent in that throng. Then came another anthem, and the Landsgemeinde was over. It had lasted three hours.

"Never have I seen such perfect order, such perfect quiet—not even in a body of a tenth its size. Yet there were no police, not so much as a constable. Once or twice, after the most exciting votes, a slight murmur passed through the host, but a cry or two of 'Quiet!' (*Ruhig!*), as the business began again, brought a hush, as of death. The only break in the gravity of the proceedings was during the comical scene of the Land-Weibel competition. Did you ever hear twelve thousand men smile? It was like the ripple, dash, and vanish of a wind-blown thunder-shower.

"We dined with our Oberrichter, saw with him the modest splendors of the cantonal capital, and under his escort were off over the mountain on our homeward tramp."

CLEAR, THE ADJECTIVE, USED SUBJECTIVELY.

To the Editor of The Nation:

Sir: Upwards of forty years ago, during my early days in India, I transmitted to the late Dr. Worcester a large quantity of materials supplementing his Dictionary published in 1846. Among the things which I then remarked on, as overpassed in it, was the subjective sense of the adjective *clear*, a sense for which I furnished him with excellent and abundant authority. This, to my surprise, when he brought out a new edition of his Dictionary in 1860, I found to be unrecorded there, though he had availed himself of hundreds of the particulars supplied by me. Nor has any other dictionary that I am acquainted with recognized it. That, however, it has been in our language close on three centuries, and that it has the practical counte-

nance of numerous authors of repute, will appear from the quotations and references which follow:

"I am *cleere* in it, that many then in that darkness did (as the proverbe is) 'See day at a very little hole.'" "I am so *cleere* in this, as in any of the two former, that there is no such difficulty in the faculty of reading," &c. Rev. Samuel Hieron (1604), *Works* (1624), Vol. I., pp. 500, 513.

"Some Preachers . . . published that Doctrine, affirming that Saint Austine had said so only in heat of disputation against the Pelagians, and not because he was *clear* in that opinion." Sir Nathanael Brent (1616), translation of *Father Paul's History of the Council of Trent* (ed. 1676), p. 168.

"For my own part, I am *clear*, without scruple, that what we have resolved is according to law." Sir Benjamin Ruddierd (1628), in Dr. Thomas Fuller's *Ephemeris Parliamentaria* (1654), p. 155.

"Yet we know, that, at the same time, there were Philosophers at Rome that were most *clear* and full in their Belief and Faith of it." Dr. Richard Burthogge (1674), *Causa Dei* (1675), p. 316.

"But this the lawyer was *clear* in, that his client might move his lodging." John Asgill, *Apology*, &c. (1713), p. 21.

"His disciples themselves were not so *clear* in their belief of him," &c. *Id.*, *The Metaphorphosis of Man*, &c. (1727), p. 27.

"In all the things I nam'd I am very *clear*." Dr. Bernard Mandeville, *An Enquiry into the Origin of Honour*, &c. (1732), p. 238.

"The Event can only determine my Judgment in this matter; but [I] am *clear* in this, . . . I am *clear* in his having my vote to be Captain of the Band." W. Horsley (1746), *The Fool* (1748), Vol. I., p. 6. Also in Vol. I., p. 86, and Vol. II., pp. 214, 297.

"And doth he pretend to the Gift of discerning the Spirits, so as to be *clear* which, or whether any, of them had it?" Bp. George Lavington, *The Enthusiasm of Methodists and Papists Compared*, Vol. II. (1751), p. 5 (ed. 1754). Also at p. 57.

"I am *clear* in it, that a play must be his next undertaking." Miss Catherine Talbot (1754), in *Letters between Miss Elizabeth Carter and Miss Talbot*, &c. (ed. 1809), Vol. II., p. 190.

"Your being so very *clear* that he was made on purpose for me." Miss Elizabeth Carter (1765), *ibid.*, Vol. III., p. 255.

"I am not *clear* as to the particulars; but there was a prodigious riot," &c. Mrs. James Harris (1769), in *Letters of the First Earl of Malmesbury*, &c. (1870), Vol. I., p. 179. Also in Vol. I., p. 186 (1770).

"Why, he is *clear* that his client never gave such a note." Samuel Foote, *The Lame Lover* (1770), Act II., Scene I.

"Of this I am *clear*, that, if it stood over to another year," &c. Arthur Murphy (about 1776), in George Colman the Younger's *Posthumous Letters*, &c. (1820), p. 204.

"Both Count Goertz and myself, however, were not *clear* of the manner and time in which he was disposed this alliance should take place." James Harris, First Earl of Malmesbury (1782), in his *Diaries and Correspondence* (1844), Vol. I., p. 521.

"I am by no means *clear* that I might not have been a wealthy merchant, or an eminent lawyer, at this very moment." R. B. Sheridan (about 1784), in Thomas Moore's *Memoirs* of him (1825), Vol. I., p. 145.

"I am not *clear*, from this information, that the profits arising from the entertainments at the Pantheon are included." *The New Spectator* (1784), No. XX., p. 5.

"I am *clear*, without doubt, that my sons' concert is after the will and order of Providence." Rev. Charles Wesley (before 1788), in Southey's *Life of Wesley* (1820), Vol. II., p. 544.

"We were, by a great majority, *clear* for the experiment." James Boswell (1791), *Life of Johnson* (ed. 1826), Vol. IV., p. 77.

"Are you *clear* that this haste will not mar, instead of make, an understanding?" William Godwin, *Caleb Williams* (1794), p. 36 (ed. 1849).

"Both think that a son ought to obey his father, and both are *clear* that a good man is better than a bad one." Rev. Sydney Smith (1804), *Elementary Sketches of Moral Philosophy* (1850), p. 20. Also at p. 25.

"I am not perfectly *clear* that the word 'little' ever occurs, in Scripture, in the sense of 'morally worthless.'" Rev. G. S. Faber (1805), *A Dissertation on the Prophecies*, &c. (1806), Vol. I., p. 125.

"Of all my friends, Coleridge is, perhaps, the only one who thinks with me upon this subject; but I am *clear*, in my own mind." Robert Southey (1807), in the Rev. C. E. Southey's *Life and Correspondence* of him (1850), Vol. III., p. 68.

"About the middle of July—but I am not *clear* of the date—the news was assured," &c. Madame D'Arblay (1815), *Diary and Letters*, Vol. VII., p. 181 (ed. 1846).

"I am *clear* that . . . is much the more elegant Latin expression of the two." Henry Hallam (1818), *Middle Ages*, Vol III., p. 567 (ed. 1829).

"I am not at all *clear* that they are not right." Lord Byron (1821), *Works* (ed. 1832, &c.). Vol. V., p. 115.

"On the whole, I am quite *clear* as to my original position." Dr. Thomas Arnold (1837), in Stanley's *Life and Correspondence* of him, p. 428 (ed. 1846).

"In the first place, I am not *clear* that the object is a good one. In the next place, I am not *clear* that," &c. Lord Macaulay (1841), *Biographies* (1860), p. x.

"You may be *clear*, in future, with whom it is fitting to hold communion." Cardinal Newman, *The Church of the Fathers* (1842), p. 106. Also in the same author's *Apologia*, &c. (1864), p. 124.

"I am not at all *clear* that I shall not have to claim," &c. Prof. Augustus De Morgan (1846), in Sir William Hamilton's *Letter*, &c. (1847), p. 16.

"And clearness of view as to regeneration, conversion, and justification will enable us to be *clear* as to all the remaining stages of the spiritual life." Bp. Samuel Wilberforce, *Addresses*, &c. (1860), p. 46.

Additional relevant quotations, which are at hand, but which it must be needless to copy out, are from Hartley Coleridge, Mr. Charles Dickens, Mr. A. H. Clough, Mr. Thomas Carlyle, Mr. James Spedding, Mr. Charles Reade, Lord Strangford, "George Eliot," Dr. W. G. Ward, Mr. John Ruskin, Miss Charlotte M. Yonge, Mr. Leslie Stephen, Mr. Richard Congreve, Mr. William Minto, and other well-known writers, to the number of from twenty to thirty.

Many of the foregoing quotations I have had by me half my lifetime. Among them, under the date of 1770, is that from Foote, which Mr. T. L. Kington Oliphant brings forward, as if he thought it a striking novelty. See his *New English* (1886), Vol. II., p. 184.

As contributing to illustrate the matter under treatment, the subjoined passages are noteworthy:

"Now, for the integrity of Moses, for us Christians, wee are sufficiently *cleared* and satisfied by the authority of the Holy Spirit of God," &c. Dr. John Donne (before 1631), Translation of *Aristeas's Auncient History of the Septuagint* (ed. 1633), p. 214.

"Sure, I confesse I grow dim-sighted, and, in this point, so *darke*, that I cannot, with helpe of my spectacles, see your inference, except," &c. Dr. William Sclater (1621), *The Quæstion of Tythes Revised* (1623), p. 85.

"The great mass of the population are either stark unbelievers in it, or deplorably *dark* about it." Cardinal Newman, *Essays, Critical and Historical* (1871), Vol. II., p. 341.

As in Dryden and Lee's *Œdipus* (1679), so in Charles Coffey's *The Devil to Pay* (1731), Act I., Scene II., a blind man is called *dark*. In its subjective acceptation, *dark* has, further, the sense of "reticent." Meanings of two classes attach to *close*, also, and to a whole host of adjectives besides.

Transferred, as a qualification, from the object perceived to the percipient, *clear*, primarily "apprehending distinctly," has come to denote "certified," "convinced," "confident," "unwavering," "positive," "sure," "determined." It will be found that one or other of these definitions equates *clear*, in all the instances of its use which are cited above.

The fact being, that the omission here dwelt on has to be multiplied by hundreds, and even by thousands, in order to represent the deficiencies of old-school dictionaries, the call for such a work as that of Dr. Murray, the fruit of enormous coöperation, cannot but be obvious.

F. H.

Marlesford, England, February 4, 1888.

THE VETO POWER.

To the Editor of The Nation:

Sir: The speech of Senator Stewart is very apropos to a discussion of the President's power. It is not a mere partisan speech—Republican against Democrat—but a stroke in the great battle of legislature against executive, with which probably more than half the Democratic members of both houses sympathize at heart, though party discipline compels them to suppress the feeling. If there is one thing, apart from his tariff message, which ought to, as I thoroughly believe it will, secure for the President the support of the country, it is his moral courage in the use of the veto power. Yet how unfair it is that such an attack should be made upon him without the power of reply. For the President can hardly take the ground, as he well might, that Congress is far more dangerous to the liberties of the people than he is. Will there be a single member of either house to raise his voice in defence, on other than party grounds, of the rights of the Presidential office? How many speakers in the autumn campaign will take the side of the President squarely against Congress? I know of one, at any rate, who proposes to exercise that privilege.

Observe the old cry, which has served the purpose of demagogues since the world began—"No man ever lived who could be safely intrusted with the liberties of the people, and no people had ever surrendered their liberties to one man without losing them eventually. If the people desired liberty, they would have to preserve it in their own keeping." What a pity there was not some one to ask the Senator what had become of the liberties of nations when intrusted wholly to a representative body; what was the history of the Long Parliament in Great Britain, of the French Convention of 1792, of the Chambers in 1848, or what is the outlook in France to-day? It would not have been amiss to glance at the history of the Continental Congress and the Confederation which succeeded it, and to balance the amount of good and evil to this country which resulted from intrusting power to one man by the name of Washington, or to have reviewed the course of Congress in the ten years preceding the civil war, and its management after that war broke out, and what were the results when the people of the United States, by tacit consent, gave a practical dictatorship to Abraham Lincoln. An appeal might then have been made to the candor of the Senator to state whether he thinks the present Congress shows itself particularly suited for the guidance of the destinies of a great nation.

The only way to achieve great things, whether military or civil, is through power intrusted to one man, the important question being to *what kind* of man it is intrusted; and safety lies not in checking and hampering his power, but in taking care that it is rightly exercised. The real trouble is not that the President has too much, but that he has too little, power as well as responsibility. There can be no question of the utter absurdity of Mr. Cleveland's position in standing, like Hercules with his club, and beating down, to right and left, the hydras that emanate from the so-called deliberations of Congress. But the very last remedy that should be adopted is to reduce the vote required for overriding his veto to a bare majority—in other words, to deprive him of it

altogether—and so leave Congress to launch upon the country whatever vagaries or political jobs may be lobbied through that body. The only effective relief from the present false situation is to give to the President, through his Cabinet officers, a voice in the guidance of legislation, so that the views of the executive, as well as of the legislature, of the responsible national authority as well as of private interests, may be heard before it takes final shape, and so that, if it finally comes to a veto, the merits of the case and the contestants may be thoroughly understood by the country.

Meantime it is greatly to be feared that Senator Stewart's anxiety about the liberties of the people may be seriously increased by the results of the autumn election. G. B.

Boston, May 26, 1888.

Notes.

Mr. Lowell's address before the New York Reform Club will terminate a volume of political essays derived principally from the *Atlantic Monthly* and *North American Review* during the past thirty years. Houghton, Mifflin & Co. will be the publishers.

'The Poets of Maine,' compiled by Geo. B. Griffith, is almost ready for delivery by Elwell, Pickard & Co., Portland.

The Palestine Exploration Fund announce the publication of three important works: 'The Survey of Eastern Palestine,' by Captain Conder, R.E., with all the author's original drawings, maps, and plans, and with the results of Herr Schumacher's work in the same district; 'The Results of the Archæological Mission of M. Clermont-Ganneau,' with all the original drawings of M. Lecomte; and 'The Natural History of the Wâdy Arabah,' by H. Chichester Hart, with illustrations. The edition will be limited to 500 copies, and the subscription price will be three guineas for the first volume, and two guineas for each of the other two. The agent for these publications is Mr. A. P. Watt, 2 Paternoster Square, E. C., London.

Mr. E. Towry White, 31 Charing Cross, London, S. W., announces the publication of a list of the kings of Egypt, giving in hieroglyphic characters their names and titles, and the names of their wives and children so far as at present known, with an index giving the ordinary name, and also the literal reading of the hieroglyphics. To this will be added a list of the names of the Roman emperors and of the Ethiopian kings as they appear in cartouches. The work will consist of 175 plates, printed only on one side of the paper. The subscription price is one guinea.

Mr. Ferdinand Ongania, Venice, having completed the work of years in his 'Basilica of Saint Mark in Venice,' with a commentary, historical and artistic, by Venetian writers, offers new terms of subscription to this extraordinary illustration of one of the world's most precious monuments. Payment may be made in the course of three years in quarterly instalments, the first on delivery of the entire work. The total cost is a little more than £93.

To "Bohn's Select Library of Standard Works" (London: George Bell & Sons; New York: Scribner & Welford) has just been added 'Selected Plays of Molière'—"The Miser," "Tartuffe," and "The Shop-Keeper Turned Gentleman"—a little volume of two hundred pages.

A useful arrangement, by the way, of the plays of Molière has been made by M. Maurice Albert, son of the late Paul Albert, the well-known *professeur de faculté* and very clever writer on French literature. This 'Théâtre choisi de Molière' (Paris: Armand Colin; Boston: Schoenhof) contains in full the six plays demanded in the official programmes for higher public instruction: "L'Avare," "Le Bourgeois Gentilhomme," "Les Précieuses ridicules," "Les Femmes savantes," "Le Misanthrope," "Le Tartuffe." To these six plays M. Albert adds extracts from most of the other comedies, connecting them by abstracts of the omitted scenes. A very fair and sufficiently complete impression of the author is thus presented in a 12mo volume of 520 pages. The work is completed by an excellent biographical introduction, historical notices of each play, abundant explanatory foot-notes, and a valuable "literary explanation" of "Les Femmes savantes," given as an example of the kind of work that should be required in the school study of Molière, or any other dramatist. It may be seen from this summary how useful the volume would be to any one beginning the study of Molière.

M. E. M. de Vogüé's well-known work, 'Le Roman russe,' until now only to be had in the large octavo edition, has been published by Plon & Nourrit in the convenient 18mo form.

Two more volumes have also been issued of the same publishers' edition of the complete works of Dostoyevsky (Boston: Schoenhof)—'Les Pauvres Gens,' his earliest novel, which, when it appeared, at once established his reputation, and 'Les Frères Karamazov,' the work in course of publication at the time of his death. M. Victor Derély is the translator of the first of these, and the second, which has been in progress for several years, is done by MM. Halpérine-Kaminsky and Charles Morice, a literary partnership which seems to have produced the most satisfactory results, judging from a long episode which appeared in 1886 in the *Revue Contemporaine*.

Prof. Kluge's interesting tract, 'Von Luther bis Lessing,' which we have already described at some length, has reached a second edition, without material alteration, but with a colored language-map of Germany (Strassburg: Karl J. Trübner).

In the annual report of the Provost of the University of Pennsylvania, we remark Prof. Dolley's account of a biological excursion to the Bahamas in June, 1887, with a view to establishing there a zoölogical station like that at Naples. The University wisely took a table at the Naples station, Prof. Dolley being its representative for a year, and will reap the fruit of its liberality if, as is to be hoped, he is able to set up at Nassau a marine laboratory in connection with his department at the University on the Schuylkill.

Turner's habit of embellishing and composing, rather than imitating, the natural landscapes to which he attached a definite name and locality, is well exemplified in the May *Portfolio* (Macmillan). Here, side by side, are shown an original drawing of the Reichenbach by J. R. Cozens, and a copy of it made by Turner, who has much improved upon it, artistically speaking. There are several interesting facsimiles of Turner's pencil drawings in the same article ("The Earlier English Water-Color Painters: Turner and Girtin"). Mention should also be made of at least two of the full-page illustrations, viz., the etching by G. M. Rhead after H. Sorgh's "Card Players," and the mezzotint by F. Short after Cotman's "St. Mary Redcliffe."

The May Proceedings of the Royal Geographical Society opens with an interesting paper on the ruby mines near Mogok, Burma, by Mr. Robert Gordon, who has recently visited them to survey the region in which they are situated. This ruby-bearing region is an area of about ten miles long by five wide, and consists of groups of small valleys, lying some sixty miles north of Mandalay. The population is divided into two classes, the mining numbering about six thousand souls, and the agricultural about half as many. The people are of several distinct tribes, who, though they have lived for centuries side by side, never intermarry, and so preserve their peculiar tribal characteristics. Their houses are well built and comfortable, and there is a general appearance of wealth throughout the district. Three different methods of mining are employed. The first, and that of the least importance now but probably the most valuable in the future, is by working in fissure veins. The second is by washing, and on a very insignificant scale. No attempt has yet been made to wash the hillsides by water under pressure. The third and most important method is by digging pits. The rubies are rarely found in the crystal form. When flawless and beyond a certain weight they are worth ten times as much as diamonds of the same weight. In the discussion which followed the reading of the paper, Mr. Streeter stated that two Indian-cut rubies had recently been received in London, one of which, after recutting, weighed 38½ carats and was sold for £20,000, and the other, 32¼ carats, sold for £10,000.

The *Scottish Geographical Magazine* for May contains the second and concluding part of Mr. J. Y. Buchanan's paper on "The Exploration of the Gulf of Guinea." While his ship was anchored off Ascension in an unusually heavy sea, which prevented their landing for several days, a series of measurements of the waves were made, with the following results: The height of the highest roller was twenty feet from trough to crest; the medium length from crest to crest was 625 feet, the largest measuring 770 feet, and the waves travelled at the uniform rate of 23.4 nautical miles an hour.

The *Revue Scientifique* for May 12 contains a paper read before the Paris Geographical Society on the "Geographical Distribution of the Population in France," by M. Victor Turquan, Chief of the Statistical Bureau of the Ministry of Commerce. He fixes the mean density of the whole country at 72 inhabitants to the square kilometre, the mean density of the earth being 10. This puts France in the sixth place among the European nations, Belgium leading with 201, Netherlands 133, Great Britain 119, Italy 105, and Germany 86. He dwells upon the striking solitude of large tracts in Champagne, the hills of the Côte d'Or, the great central plateau, the Landes and Berri. The country for a great extent about Paris also is very sparsely populated. The present groupings of the people he regarded as being largely dependent upon the nature of the soil that nourished them, and therefore comparatively stable and permanent. The paper was illustrated by maps, one series of which was so colored as to represent the population of the different communes. A section of this map is reproduced in the *Revue*.

M. Victor Develay's slippered view of the late Désiré Nisard in *Le Livre* for May is brief and unsatisfactory, and the portrait of this professorial light of the Second Empire which it accompanies may be thought a better vindication of his public character by his private. One still recalls Béranger's inuendo—

"Pour moi Nisard sera-t-il l'éloquence?"

In another part of *Le Livre* we read that Nisard left memoirs for posthumous publication. M. Julien Lemer comes nearer the personality of his subject in "Quelques Autographes in-

times de Charles Baudelaire," which ends with censure of the poet's family for suppressing certain unpublished works referred to in this correspondence, after his death. Opinions will differ on this point, accordingly as one esteems Baudelaire's productions as "pourriture" or otherwise. M. Lemer approves Hetzel's idea that after a certain period the state should abridge the property right of an author's heirs or successors, and, as in Mr. Pearsall Smith's plan, throw the works open to all publishers, on the sole condition of paying a fixed percentage on the selling price, which the state would return to the heirs. M. A. Quantin pays an affectionate and reverent tribute to a veteran publisher lately deceased, Henri Fournier, who began an apprentice of Didot and ended an associate of Mame at Tours, and had, between, an honorable career on his own account at Paris. His establishment in that city eventually fell to M. Quantin himself.

Any one who has read Tolstoi's 'Physiology of War: Napoleon and the Russian Campaign,' will be repaid by following M. Albert Sorel in his discourse before the École des Sciences Politiques on Tolstoi as an historian. A somewhat condensed report of it was given in the *Revue Bleue* for April 14. The critique is the work of an admirer unable to accept the theory of the uselessness of great men in determining the course of history. M. Sorel, without feeling, exposes Tolstoi's treatment of Napoleon and his generals in 'War and Peace,' and consoles himself for the anti-French bias by remarking that if Tolstoi is "très sévère aux Français—il l'est incontestablement—il l'est aussi, sans aucun doute, et plus encore aux Allemands; il professe pour eux, en toute occasion, un dédain colossal." The most suggestive part of the paper, however, is M. Sorel's showing how Tolstoi makes a Shaksperian use of Thiers's history, as in the episode of the Cossack who talks freely with the Emperor, not recognizing him; and the hardly fortuitous parallel between his views on war and those of Joseph de Maistre, notably in the latter's 'Soirées de Saint-Pétersbourg.'

We have received the seventh instalment of the Codici Palatini of the Florence Central National Library in the "Indici e Cataloghi" issued by the Italian Ministry of Public Instruction. Like the foregoing, it contains a highly interesting description of the several MSS., with an array of first lines in the case of the poems. Dante, Petrarch, Boccaccio, and many lesser luminaries stud the pages.

We print on another page the last of the late Michael Heilprin's critical contributions to the *Nation*—the review of Sayce. It was delayed in getting into type till his fatal illness overtook the writer.

—*Harper's* for June continues the papers upon the West which were promised as one of the features of the magazine for the current year. Of the extremely favorable view which Mr. Warner takes of the city of Chicago we have already spoken, but his discovery that it is a modest city in his first article hardly prepared us for the announcement in the second paper this month that it is an uncommonly moral city. The opposite view, which has not been hitherto opposed, is the prevalent one, and certainly one does not need to go far to find grounds for it. Mr. Warner ascribes it to the influence of the press of the city, which he thinks is not representative of the real facts; on the other hand, he gives no reasons for his own conclusion that Chicago is more wholesome morally than other cities of its size, and than many much smaller. A less doubtful distinction of the city is its attention to education, in which, like the entire West, it is eminent; but, notwithstanding Mr. Gunther's collections, to which Mr. Warner gives much space, Chicago libraries and museums must be regarded as things of the future. The other article in this field is upon Kansas, of which State a comprehensive account is given, so far as its soil, climate, and material progress are concerned. We observe in it a new word, which has certainly sprung from the soil, "urbiculture"; and as an American equivalent for what the Greeks called "colonization" it is not without a meaning, but it will probably be some time before it becomes established as a branch of human activity and is taught in the universities of the prairie. Mr. Bowker finishes his survey of "Literary London" with notices of the novelists and portraits; but it is the latter that make the article. A sketch of Capri, which does not lose its attraction as a subject, is not very good, nor are the views those which give the island its peculiarity; and the paper upon life with the Arabs is equally unsatisfactory. In the Easy Chair Mr. Curtis defends the American press with skill, and says a good deal which is worth remembering by those who look for a virtue in it which does not exist in the community, of whose interests and tastes it is the expression; disinterestedness is perhaps really greater in it than in any other business enterprise.

—*Scribner's* begins its series of railroad papers with a number of beautiful illustrations, by means of which a view of engineering is given to the eye that is an effective aid to the text. The characteristics of American railroading, in the department of construction, are very clearly pointed out, especially the substitution of other modes of surmounting the difficulties of the lay of the land for the method of tunnelling, which is so much more resorted to in Europe. It is an advantage, too, that the writer begins at the beginning, with the planning of a line, and dwells on the great importance of this to the cost and the success of a road. He defends the American system of building rapidly and cheaply, and then, as the business of the line develops, rebuilding with better material, and he remarks upon the good fortune of the West in having the railroad to go first and determine direct and inexpensive lines of communication on which the grouping of the population afterwards depends. There are other features of the article, showing the development of railroading in the change from iron to steel and such particulars, which contribute to make it an excellent introduction, though it must be said that in attributing the amelioration of all things in this century and *in futuro* to the railroad, the writer gives to one element in modern civilization a primacy which has been unrivalled since the days of Aaron's rod. An article upon life in the hospitals will be of interest to the many who are concerned indirectly in charities; Prof. Hall's "Story of a Sand-Pile" is for social philosophers; Mr. Birrell's notice of Cardinal Newman, with two excellent portraits, is welcome, but very inadequate; Mr. Stevenson's discovery that Fielding was a gentleman deserves to be chronicled; and of Mr. Aldrich's pastoral we have only to say that it is in the most finished form of the popular, piquant, society school of verse, and bears comparison with anything in its vein.

—Halliwell-Phillipps writes to an American friend: "This winter has been a season of sore disappointment to me. I was greatly in hopes to have made good progress in the arrangement of my still very large stock of unpublished materials illustrative of the life of Shakspere, but a succession of minor illnesses has sufficed to limit my work for months past to the composition of a few controversial letters. All this is rendered the more disappointing by my publishers' notice, just come to hand, that they have sold out all of the last edition [the seventh] of my 'Outlines.'" No one who has read a page of the Life of Shakspere, which Mr. Phillipps still modestly terms 'Outlines,' though the last edition has swelled to 848 pages, will wonder that a new edition is called for every year. It is hard to believe that any one can read through that work and still remain unconverted from the Baconian heresy. Whoever recalls how Mr. Phillipps, when first putting his hand to the 'Outlines,' deplored that "the time he had occupied in gathering together the necessary artistic and literary material had practically excluded him from making an effective use of his accumulations," will not easily believe that he will not still bring forth fruit up to the old age of Gladstone.

—The activity of our State legislatures is strikingly shown in Mr. Raymond L. Bridgman's little book, 'Ten Years of Massachusetts' (Boston: D. C. Heath). Under a dozen general heads—Public Administration, Labor Legislation, Education, and the like—he has grouped the substance of the most important statutes passed by the General Court since 1878; and in a number of cases he has added instructive comment on the growth of legislation, and on the influences which have brought about particular acts. In nearly every field of legislation there has been an honest attempt to correct abuses and to advance civilization; many of the acts are models which other States would do well to copy. The significance of the book is, however, its unconscious testimony to a change which seems to be coming over the popular conception of government. Year by year the Legislature has entered upon new fields. The record shows a large number of acts on forests, foods, the water supply, and public health. Additional protection is provided for passengers on railroads and employees of railroads and factories. Children are protected from cruelty, from acting in theatres, from roller-rinks, and from toy-pistols; and they are instructed in temperance hygiene. The Commonwealth has gone to the point of putting mufflers on "pop-up" safety valves. Moreover, the State more and more assumes the administration of local laws, either by creating commissions or by limiting the police, taxes, and debts of municipalities. Another striking feature is the number of new laws which are notoriously not executed. Such are the provisions for a secret ballot; against betting and gaming, the selling of "police" illustrated papers, the selling of cigarettes to boys; and the saloon-screen law. The influence of "labor" is plainly seen in acts on convict labor, the regulation of factories, and weekly payments, and in the proposal, which was almost carried, that the State should build small houses to be paid for in instalments.

—Library catalogues are seldom of interest, unless to specialists. One noteworthy exception is the earliest 'Catalogue of the Library of the United States,' published in 1815, pp. 170, xxxii. This work was the production of Jefferson, and the only one of the kind that can boast a President or ex-President as its author. The Congressional Library had been burned by the British on August 24, 1814. Within a month Jefferson wrote, offering to sell his library to Congress on its own terms, and forwarding a catalogue which, in its plan, dated from his first study of Bacon, but which in details had grown with the growth of his collection. His proposal was

at once accepted by the Senate, and unanimously, as it was felt that the Jeffersonian gathering contained more books specially needed in Congress than were elsewhere within reach, and also that, having been accumulated with much pains, day by day, during Jefferson's Parisian residence, it would form a good nucleus for future accretions in all departments. In the House, however, the bill for making the purchase encountered steady opposition. At the outset a motion to postpone indefinitely was only defeated by a vote of seventy-three to sixty-nine. It was then proposed to purchase only such a part of the Jefferson books as were suitable for Congressional purposes. When it was ascertained that the books must all be bought or none of them could be had, there was talk of "selecting such books as might be useful to members and selling the rest at auction." But the most memorable motion was made by Mr. King of Massachusetts, who moved "to instruct the Library Committee, as soon as the Jefferson volumes should have been received in Washington, to select therefrom all books of an atheistical, irreligious, or immoral tendency, if any such there be, and send the same back to Mr. Jefferson without any expense to him." "The debate," says the chronicle, "became rather too animated, and was checked by the Speaker." The purchase was at last voted by a majority of ten.

—The threefold division of the Catalogue was no doubt suggested by these words of Bacon: "The parts of human learning have reference to the three parts of man's understanding, which is the seat of learning: History to his memory, poesy to his imagination, and philosophy to his reason." Under these three heads the books are classed in forty-four chapters. The volumes were reckoned by their owner about ten thousand, and the price paid was less than $25,000. It is unlikely that any American library of its size was more valuable, or better selected. It is a shrewd saying: "If you would find out what a man's character is, get a sight of his personal account-book." Jefferson's book catalogue is suggestive of secrets regarding his life, and so it ought to be bound up with his works, and if possible in facsimile. In a book published at Boston in 1712 John Wise, a Puritan parson, wrote the following words: "The end of all good government is to promote the happiness of all, and the good of every man in all his rights, his life, liberty, estate, honor," etc. This and others of his utterances gave Wise fame as the first American Democrat. Two editions of his work were republished at Boston in 1772, for no pre-Revolutionary writer was such a master of style. The similarities in Wise to phrases in Jefferson's Democratic Declaration have wakened curiosity as to whether Jefferson had read the work of Wise. Much fruitless search has been made. The catalogue has an entry which may serve to thicken other proofs, in an index of the surnames of authors which Jefferson himself made, as he expressly states. Among them is the name Wise. The reference there made to chapter xv is erroneous. But the occurrence of the name tends to show that he had the book, and the more as the work of Wise was a pamphlet of not more than a hundred pages. In the chapter on Politics are many volumes of Political Tracts without authors' names. No. 183 is an octave of Tracts from 1769–73, which includes the year when John Wise was republished. It is worth search to discover whether John Wise is not now sleeping in the Congressional Library after inspiring Jefferson.

—The rise of the earliest Christian art has left its tide-mark still traceable in Irish art, while subsequent advances have mostly obliterated it from the continent of Europe. The interest of the art itself is narrow, though real. Its excellence is in its manuscripts, and in its less known metal work, forms of art which were quietly cultivated in Ireland when the rest of Europe was given over to invasion and decadence. St. Patrick was converting the Irish and laying the foundation of their monastic church while Genseric's pillage of Rome went on. When the period of invasion was over, and the arts began to revive on the Continent, Ireland followed, *haud pari passu*, but in the same track, till her season of invasion set in, and permanently stopped her advance. We see in her, therefore, a curious example of arrested growth, whose interest is greatly in the light which it throws on its continuation elsewhere. We find on the Continent the complete development, while the early stages have disappeared. In Ireland the early stages are left, and the development has never followed. Every study that tends to connect Irish antiquities with the main history of Art in Europe is welcome, and this is the virtue of Miss Margaret Stokes's work, for which her knowledge of Christian antiquities and her association in the special studies of the late Lord Dunraven have given her special qualifications. Her little volume, which is freely illustrated, is not only valuable, but readable. It bears title—'Early Christian Art in Ireland' (London: Chapman & Hall; New York: E. & J. B. Young & Co.).

LEA'S HISTORY OF THE INQUISITION.—I.

A History of the Inquisition of the Middle Ages. By Henry Charles Lea. 3 vols. Harper & Bros. 1888.

Mr. Lea needs no commendation to the students of mediæval history as the most learned living guide to their studies in certain phases of mediæval life and thought. He has chosen for his themes the more obscure forces which were acting on the minds of men in the middle period, and which were training them for those more striking exhibitions of activity in politics and war which make up the narrative of the ordinary historian. He has little concern with the growth of kingdoms, with struggles for personal or family aggrandizement, least of all with the mere biographies of kings and prelates. His former works on 'Superstition and Force,' and on the 'History of Sacerdotal Celibacy,' showed the tendency of thought which is here carried out to a still greater extent. These earlier volumes contained studies in the great legal and social institutions on which mediæval life was based. They led the student into that strange middle world where men moved like the half-demented victims of terrible delusions. It was Mr. Lea's special interest to show that the singular manifestations of this mental condition were not, in fact, outbursts of fanatic madness, but were deeply rooted in the legal and social ideas of the time. Law, as the embodiment of racial instincts, has been the starting-point and the sure basis of his studies.

In beginning the history of the Inquisition he has been guided by the same principle. He expressly declares his conviction that "the surest basis for the investigation of a given period lay in an examination of its jurisprudence." We are thus able to feel that he has solid ground beneath his feet, and, no matter how incredible the instances of human weakness and credulity which he presents, we must believe that he has not borrowed one particle from his own prejudice, nor drawn ever so slightly upon his historical imagination.

The whole period of the Inquisition Mr. Lea divides at the Reformation into two distinct parts, of which only the former is treated in these three considerable volumes. It will thus be seen that some of the most terrible and dramatic portions of the history, especially those relating to the Spanish Inquisition and its dealings with the Low Countries, still remain to be considered. It must be the wish of every scholar that the author may be spared to complete the work according to his present plan.

As in his previous work, so here, Mr. Lea takes his subject in its widest meaning. By the history of the Inquisition he means not merely an account of the institution itself, but an exhaustive examination of the social, intellectual, and political conditions which produced it. He means, further, an array of illustrations of its working and of its effects upon society, such as make any serious doubts as to the general accuracy of his presentation impossible. The survey of the conditions which made the Inquisition possible, we might almost say inevitable, occupies one-half of the first volume. It is a masterly summary of the process by which the Church rose to be the absolute dominating power over the minds of men. That process is shown in the gradual development of the idea of heresy, and its extension to include every form of departure from the usages of the Church. The awful episode of the Albigensian Crusade is treated as the natural outcome of the duty of the organized Church to insist upon uniformity of belief and practice as essential to true Christianity. It would be too much to say that Mr. Lea has made perfectly clear precisely what the heresy of the Albigensians was, whence it came, what was its relation to the other forms of mediæval divergence from orthodoxy, and the basis of its hold upon the population of southern France. These are still, and are likely to remain, obscure problems.

The description of the Catharan heresy, drawn from many sources, makes it very clear why the policy of persecution became a necessity. The very existence of Catholicism was endangered by a theory of the true Church which made it consist of a select body of saints, instead of being the natural home and refuge of all mankind. This doctrine was spreading very rapidly, and the dominant Church was forced to defend itself or perish. Singularly enough, the rescue of the Church came from an impulse strangely like that which was threatening its very life. There was no more potent cause of heresy than a sense of the insufficiency of the Church organization for its proper work in the world; this same sense of insufficiency produced the mendicant orders, who were to be the chief weapon of the Church against heresy. The fanatic devotion of Dominic and Francis, if it had been rejected by the Papacy, as at one time it seemed likely to be, might very easily have been turned into a critical and furious opposition. As it was, the means for the destruction of heresy were put into the hand of the Papacy almost against its will, and from that time onward persecution developed itself with resistless force.

In describing the Holy Office, Mr. Lea departs from the tradition which would represent it as a new creation, and shows that it was a development out of perfectly well-recognized principles of legal process. The "inquisitio" was a form of procedure well known to the Roman law; its peculiarity consisted in its use as a means of hunting down the offender, and it was the gradual application of this process to the trial for heresy which produced

that frightfully effective machinery known as "The Inquisition." Mr. Lea's account of the Inquisition proper, its organization, its legal process, and its relation to other authorities, forms the most important and at the same time probably the least popular part of his work. It occupies but one-half of one volume, a space altogether disproportionate, one must think, to its real value. The accumulation of horrors which fills the later volumes is tame reading compared to this calm, lawyer-like presentation of the devilish ingenuity with which the forms of law were applied to meet the ever-new forms in which the persistent heresy of the Middle Ages presented itself. At first the power of inquisition rested in the regular ecclesiastical courts, and the inquisitors were only the regularly employed agents of the courts. But here appeared the danger which the Papacy was always forced to combat. Local courts were all too sensitive to local influences. The ecclesiastical judge, a man among men, would have too many human weaknesses to make him the blind servant of the Papal will. The inquisitor must be set free from all personal allegiances, except to the one dictating force at the centre. We are shown here how this emancipation of the inquisitor went on, step by step, in the face of every protest, until he finally stood as a man practically without limits to his action. Even a pope, if he were, perchance, too humane or too timid to suit the demand of the Holy Office, might well tremble before it. The Papacy had raised a spirit which it could not itself control.

Throughout this examination of the inquisitorial process Mr. Lea is calm and dispassionate. He resists with exceptional courage the temptation which any lover of the light must feel, to treat his subject with indignant contempt. He is enabled to do this by his thorough understanding of the spirit of mediæval Catholicism. He sees clearly, as a superficial student cannot see, the enormous stake for which the Church was playing, and he sees also what there was of good for humanity bound up with its very life. The forms of heresy combated by the early Inquisition were undoubtedly full of dangers to the moral and religious condition of Europe. Their holders were not uniformly men of light. They too were victims of the darkness of the time; and on the whole, if one had to choose, one would rather trust the dangers of ecclesiasticism, with its great germ of living truth, than these wild offshoots of Oriental fanaticism, even though they did point out with unerring finger the plague-spots on the surface of the body of the Church.

It may be safely said that no presentation of the story of the Inquisition by previous writers can be at all compared with this for its clearness of vision, its comprehension of the problem, and its thoroughness of research. We reserve for a second notice the detail of the working of the institution presented in the second and third volumes.

SAYCE'S HIBBERT LECTURES.

Lectures on the Origin and Growth of Religion, as illustrated by the Religion of the Ancient Babylonians. By A. H. Sayce. London: Williams & Norgate; New York: Scribner & Welford. [The Hibbert Lectures, 1887.]

THE Preface to this work—one of its author's most extensive and most elaborate productions—opens with "a word of apology . . . for the numerous repetitions in the following chapters, which are due to the fact that the chapters were written and delivered in the form of lectures." The explanation is inadequate, for there are also repetitions in single divisions. In the first chapter, for instance, we read in a note to page 72:

"The name of Sin, the Moon-god, is met with in an Himyaritic inscription, and a god who thus found his way to southern Arabia would be equally likely to find his way to northern Arabia";

and again (p. 50):

"Sin was the Babylonian name of the Moon-god. We learn from a Himyaritic inscription that his name had been carried into southern Arabia, and there is therefore no reason why it should not have been imported into northern Arabia as well."

On page 45:

"Josephos has preserved an extract from the Egyptian historian, Manetho. . . . In this it is stated that the earlier name of Moses was Osarsiph, and that he had been priest of Heliopolis, or On. Here it is evident that Moses and Joseph have been confounded together. The name of Joseph, who married the daughter of the priest of On, has been decomposed into two elements, the first of which is the divine name Jeho, and this has been changed into its supposed Egyptian equivalent, Osar, or Osiris."

And in a note to page 51:

"Manetho (ap. Joseph. . . .) states that the original name of Moses was Osarsiph, and that he had been a priest of Heliopolis, or On. Osar-siph is simply Joseph, Osar or Osiris being substituted for Jeho (Jo) or Jehovah. Joseph, it will be remembered, married the daughter of the priest of On."

Besides, another word of apology ought to have been inserted for the extensive repetitions in these 'Lectures' and the appendices to them of expositions made by the author in various previous publications.

We are far from inclined to make it appear that Prof. Sayce is apt to repeat himself from lack of fresh matter for new lectures or dissertations. His learning and fame shield him against such an imputation. No other archæologist is more often before the public with discoveries, or observations on discoveries, in his fields of study. And what he has to say always betokens ample familiarity with the latest research, and often ingenuity. What we object to in him, as in some of his fellow-laborers in Assyriology, is an excessive propagandist zeal in the interest of that science, from which springs an irresistible habit of inculcation. In the 'Lectures' before us, everything picked out of the monumental rubbish of Babylonia and Assyria which can throw the least flicker of light, however evanescent and calculated to deceive, upon the gods and goddesses of Babylon, Borsippa, Nipur, Larsam, Eridu, etc., is pressed upon the reader with as much persuasive effort as if the salvation of Christian souls depended on a true recognition of Ea, Mullil, and Ninip, Zarpanit, Davkina, and Ninkigal, and their like. And a very large part of what is thus offered as knowledge of a high order—though not without reservations as to entire accuracy, made in view of daily fresh light—rests, in reality, on a frail network of conjecture. The conjectures are surely of interest to the scholar, and worth the trouble of examination—as are the problems of Etruscan or Basque etymology—but they should be dealt with as topics for the learned, without missionary ardor. The subject, on the whole, is not worthy of enthusiasm; for Chaldean mythology, as revealed to us by the pedant scribblers on clay tablets, is as completely devoid of poetic charm and primitive naïveté as the Assyro-Babylonian history of the monuments is devoid of all traits of nobility or naturalness.

A study of "the religion of the ancient Babylonians" is, it is true, not without interest in regard to Biblical inquiry. It imparts to us, for instance, information about Nebo, Merodach, Bel, Babylonian divinities mentioned in the Old Testament—the first in Isaiah, the second in Jeremiah, and the third in both. But how much does that new information amount to? Before cuneiform decipherments had been made, we believed with Gesenius that the gods mentioned were divine embodiments of the planets Mercury, Mars, and Jupiter, respectively. Now we have learned that "Nebo must have once been an elemental god," that "Babylonian astronomy made him the presiding deity of the planet Mercury, just as it made Merodach the presiding deity of Jupiter," and that "the Merodach of the historical age" was "the great Bel or Baal of Babylon," though different from "the older Bel of Nipur." According to this, Gesenius was right when he identified Nebo with Mercury, and Bel with Jupiter, and mistaken in regard to Merodach, in not identifying him with the great Bel of Babylon, but deriving his name, which, in Jeremiah (l, 2), is coupled with Bel's, as Nebo's is in Isaiah (xlvi, 1), "a stirpe *Mord*, *Mort*, quæ et *mortem* et *cædem* significat," just as "*Mars*, *Mavors*, et *mors* ejusdem originis esse videntur" ('Thesaurus,' *s. v.*). And the gain is a different meaning, without a new rendering, for a line in Jeremiah. Whether King Merodach-Baladan or King Evil-Merodach bore the name of Jupiter or Mars, is, of course, wholly indifferent.

Incomparably more important to Biblical students would be the remarks concerning the names of Joseph, Moses, Saul, David, and Solomon, if they were sufficiently substantiated. Collectively they would greatly impair the value of the Scriptural narratives of all early Hebrew history, even if considered merely as reflections of popular tradition. The story of Joseph would cease to be a recollection of Egyptian life, and become something like a Babylonian myth—because it appears "probable that the name of Joseph was originally identical with the Babylonian *asipu*," which may be the designation of "the god of the oracle," especially as among the names of the cities captured by Thothmes III., in Palestine, there is one which is read *Iseph-el*, and may be translated "Joseph, the God." The name Moses would be a reminiscence of the Babylonian *māsu*, "the hero" or "leader," "an epithet applied to more than one divinity," but "in a peculiar sense associated with the sun-god"—the character which represented the idea of hero also representing "the idea of a 'collection of books,' . . . 'a scribe' or 'librarian,'" terms so appropriate to the lawgiver "to whom Hebrew tradition referred the collection of its earliest documents, and the compilation of its legal code." Besides, Moses was said to have died on Mount Nebo, which bore the name of "the prophet-god of Babylon, . . . the patron of writing and literature," as a star "accounted one of the seven 'heroes' or *māsu*"; and in the story of him we also meet with the name Sin, which was that of another Babylonian god, and "Sinai itself," which Moses reached after traversing the wilderness of Sin, "can scarcely signify anything else than the mountain sacred to the Moon-god." Saul and Solomon also bear the names of Assyro-Babylonian gods, popularly bestowed on them instead of their original names. For the former, "the one asked for" (Heb. Shāūl), the people wisely discovered the "singularly appropriate" mythological name Savul, or Sawul, by which the sun-god was known at Babylon, whence if "Rehoboth of the river" designates that city, the Edomites also receiv-

ed a King Saul (Gen. xxxvi). The successor of David they named after Sallimanu, "the god of peace," probably a fish-god, "honored particularly in Assyria," in a list of whose gods "mention is made of 'Sallimanu the fish, the god of the city of Temen-Sallim (the foundation of peace)'"—so strikingly reminding one of Solomon of Jerusalem.

The argument as to the name of the son of Jesse is fuller. Condensed, it runs thus: "That David's first name was Elhanan (or Baal-hanan) has long been suspected, since it is stated in one passage that Elhanan, the son of a Bethlehemite, 'slew Goliah the Gittite, the staff of whose spear was like a weaver's beam,' while the feat is elsewhere ascribed to David; and at the head of the thirty mighty men of David is placed Elhanan, the son of Dodo of Bethlehem, where we should probably read 'Elhanan, who is Dodo,' or David." This name is identical with that of the Syrian supreme Baal, or Sun-god, Hadad. In an abbreviated form, Shalmaneser speaks of the god Dáda of Khalman, or Aleppo. Be-dad, or Ben-dad, "the son of Dad," was the father of the Edomite, Hadad. David, "or Dod, as the word ought to be read," or Dodo—"the beloved one"—is the male corresponding to the Phœnician goddess and presiding deity of Carthage, called Dido by the writers of Rome. And a recent thorough examination of the squeeze of the Moabite stone by Profs. Socin and Smend, which resulted in some new readings, shows that King Mesha "tells us that he had carried away from Ataroth 'the *arel* (or altar) of Dodo and dragged it before Chemoth,' and from Nebo 'the *arels* (or altars) of Yahveh,' which he likewise 'dragged before Chemoth.'" From this parallelism "it is quite clear" "that the Israelites of the northern kingdom worshipped a Dodo or Dod by the side of Yahveh, or, rather, that they adored the supreme God under the name of Dodo as well as under that of Yahveh." It is even "suggested that Dod, or Dodo, was an old title of the supreme God in the Jebusite Jerusalem, and that hence Isaiah, when describing Jerusalem as the tower of the vineyard the Lord had planted in Israel, calls him Dôd-î, 'my beloved.'"

To us "it is quite clear" that all these identifications, however specious some of them may appear, are extravagantly forced. Let us examine them briefly. Prof. Sayce himself evidently knows only an epithet *asipu*, but no such name of a god, for a mention of which we have in vain searched the books (on our shelves) of Schrader, Delitzsch, Hommel, George Smith, Lenormant, the Oxford professor himself, and other Assyriologists. The city name read by our author Iseph-el, and translated "Joseph, the God," is read by Brugsch, the best authority on the subject, Ishpar, and identified with Micah's Shaphir. Nor have we been able to discover a trace of a god Māsu, into which the epithet *māsu* is twisted, or of Savul, or Sawul. Now we should have to believe that the Hebrews of those olden times were wonderfully learned in the mythological lore of Babylon and Nineveh, with which, as the Bible and the monuments concurrently show, they had not the least connection in those periods, if we were to assume that such recondite and obscure designations could have any popular meaning for them, as substitute names for their heroes. If surnames like "the one asked for," "the beloved one," or "the peaceable" were assumed, or bestowed on kings—as the Egyptian Ptolemies were called Soter, Philadelphus, Euergetes, etc.—the purely Hebrew appellations Shāūl, Dāvīd (or, say Dōd), Sh'lōmōh, were excellently chosen, and there was surely no need for the names of foreign idols. Nor were the Israelites in the habit of bestowing on a man the simple name of a divinity. They would couple with that name—Jah (or Jehovah), El, Baal—a verb or a common noun, thus: Jedediah, Jehovah's favorite; Elkanah, God-made; Jerubbaal, Baal-fighter. The list of the thirty mighty men of David which is cited to prove the identity of that King's name with Hadad and Dada, contains nine such compound names—Asael, Elhanan, Elika, Eliahba, Jonathan, Eliphalet, Eliam, Uriah (besides the incidentally mentioned Joab and Zeruiah)—and no name of a foreign god. "That David's first name was Elhanan has long been suspected," is true, but the conjecture has just as long been considered easily refutable by the texts (II. Sam. xxi and xxiii) on which it was grounded. Thenius ('Die Bücher Samuels') showed its hollowness, Wellhausen ('Der Text der Bücher Samuelis') completely ignored it. And the supposition that "the Israelites of the northern kingdom worshipped a Dodo or Dod"—not the least allusion to which can be found in the Bible—is extremely far from being made "quite clear" by Socin and Smend's examination of the squeeze of Mesha's inscription. These professors themselves, in their joint monograph on the subject ('Die Inschrift des Königs Mesa von Moab für akademische Vorlesungen,' 1886) say: "Allerdings könnte man in Dodo . . . vielleicht ebenso gut den Namen des Stifters wie den einer Gottheit (Liebesgottheit?) suchen." That is to say, Mesha's "Dodo"—if correctly read—may designate a man, and, if a divinity, a goddess of love—the Dido of the Phœnicians. (What an appropriate name for King David!) Besides, the *arel* in question was "deutlich Moabitischen Ursprungs," carried as "spolia opima" to the border-town Ataroth, and back to Moab by Mesha. On so frail a basis is reared the hypothesis that the Israelites "adored the supreme God under the name of Dodo, as well as under that of Yahveh," and that even Isaiah spoke of the Lord as Dod!

After all this evidence of the learned author's fondness for bold conjectures, it is hardly necessary to state that his faith in the extravagant speculations of "the brilliant and gifted François Lenormant," of "Dr. Fritz Hommel, one of the ablest of the younger band of Assyrian students," and others, as to the relations of Accado-Sumerian to Semitic Babylonian and of Accadian and Sumerian to each other, has not been shaken in the least by the more than half accomplished desertion of Friedrich Delitzsch to the side of Halévy, who knows only Semitic-Babylonian inscriptions. We will conclude our notice of the 'Lectures' with an extract showing the author's offensive-defensive attitude in this question:

"Far be it from me to disparage . . . the work which has been accomplished by Professor Delitzsch and his pupils. We owe it in great measure to him that the decipherment of Assyrian stands at its present level of scholarship. . . . But the Leipzig school has, with one or two striking exceptions, been far too one-sided. Archæology, history, religion, mythology, have been neglected in favor of the almost exclusive study of words: words, too, not as bound together in the sentences of untranslated texts, but isolated and apart. . . . This excessive devotion to vocabularies has been too often accompanied by a misconception or forgetfulness of the real nature of the 'bilingual lists.' They are for the most part commentaries upon older texts, made we know not when, and intended to explain the meaning of rare or obsolete words, ideographs, and expressions. The original text was sometimes in Accado-Sumerian, sometimes in an older form of Semitic Babylonian, while at other times texts in both languages were commented on together by the scribe. In the so-called non-Semitic column of the 'bilingual lists,' accordingly, we must expect to find not only Accado-Sumerian, but also Semitic words as well as ideographs, which may be either of Sumerian or of Semitic origin. . . . The mythological lists, which contain a medley of divine names and epithets drawn from sources of all kinds and ages, partly Accado-Sumerian, partly Assyrian, partly purely ideographic, partly even Elamite or Kossæan, afford a good example of the difficulty and danger of trusting implicitly to such guides. It is from this cause that Assyrian has been taken for Accadian, Accadian for Assyrian; while ideographs have been read phonetically, and phonetic characters as if they were ideographs."

NEW ASTRONOMIES.

Unfinished Worlds: A Study in Astronomy. By S. H. Parkes, F.R.A.S., F.L.S. James Pott & Co.

Half Hours with the Stars: A Plain and Easy Guide to the Knowledge of the Constellations. . . . Maps and Text specially prepared for American Students. By Richard A. Proctor, F.R.A.S. G. P. Putnam's Sons.

The New Astronomy: By Samuel Pierpont Langley, Ph.D., LL.D. Boston: Ticknor & Co.

Outlines of Physiography: The Movements of the Earth. By J. Norman Lockyer, F.R.S. Macmillan & Co.

The Asteroids, or Minor Planets between Mars and Jupiter. By Daniel Kirkwood, LL.D. Philadelphia: J. B. Lippincott Co.

Astronomy for Amateurs: A Practical Manual of Telescopic Research in all Latitudes. Edited by John A. Westwood Oliver. Longmans, Green & Co.

Old and New Astronomy. By Richard A. Proctor. Longmans, Green & Co. [Part I.]

SUCH a book as 'Unfinished Worlds' is deserving of very little notice. The author writes like a mere dabbler, making frequent exhibitions of his ignorance, and bad use of English besides. The disappearances of Saturn's ring are phenomena he has not mastered; Struve's hypothesis of the closing in of this ring is accepted as fact; and Darwin's famous researches into the tidal evolution of satellite systems are all in vain for him, for the satellites of Mars are an unaccountable enigma, unless allowed to be asteroids in captivity! The "size" of a star and its "magnitude" are one and the same thing to Mr. Parkes, and the plumb-line is an instrument for measuring distances.

Amateurs and tyros in star-lore have to thank Mr. Proctor for another means to their end in his 'Half Hours with the Stars.' It is very easy, as he says, to gain a knowledge of the stars—that is, star names and sky places—if the learner sets to work in the proper manner. Of course, the attempt to use a set of the ordinary star maps, which give no direct indication of the position of the stars and constellations in the sky, is a very improper manner—first, because it is at times even a little difficult for the astronomer to pick up particular asterisms from such maps, and the beginner could not be expected to do better; and, second, because of the perpetual recurrence of the same difficulty in the perennial change of relation of constellation lines to the horizon plane. Mr. Proctor has sought to overcome all troubles by showing in twelve circular maps all the visible stars of our latitudes. Each has the zenith for its centre, and the horizon for its periphery, and shows, thus, at some hour each night, the position and direction—the names, too—of all the stars readily visible to the average eye. More may be gained than is lost by crowding these maps with many a line and symbol; but it makes much difficulty in imagining how the sky looks from the confused fulness of the map. Non-stellar

matter might at least have been less prominent. Appropriate letterpress description faces each map. The book is well got up, and cannot fail to afford valuable help to the child in ouranography.

In 'The New Astronomy,' by Professor Langley, we find omission of little or nothing of the physical processes of to-day: photometry, dry-plate photography with its marvels, spectroscopy—all are there. Nor does he end with the bare results of the new research; all is thought out philosophically, and the ultimate bearings indicated. The author shows his culture, without obtruding it, and his book is charming reading, in spite of minor faults in style and polish. The question of the industrial relations of the sun to man is felicitously dealt with, and Professor Langley shows himself a firm believer in the future of sun-power. The sun-machines and solar engines so far built are sometimes thought of as mere playthings. "If toys," he says, "they are the toys of the childhood of a science which is destined to grow, and in its maturity to apply this solar energy to the use of all mankind." Again, p. 116:

"Whoever finds the way to make industrially useful the vast sun-power now wasted on the deserts of north Africa or the shores of the Red Sea, will effect a greater change in men's affairs than any conqueror in history has done; for he will once more people those waste places with the life that swarmed there in the best days of Carthage and of old Egypt, but under another civilization, where man shall no longer worship the sun as a god, but shall have learned to make it his servant."

The publishers have given Professor Langley's work the handsome setting it deserves—with an abundance of illustrations, fine paper, and a rich binding. For the most part, the aptly chosen and well-executed illustrations are not less new than the astronomy to which they relate. We find some fault with the printer's scattering of them among the subject-matter—drawings and text hitch along together, at times with marked inconvenience to the reader, who has frequently to turn many leaves before finding the cut under description. The engraver's work is generally beyond criticism, but the drawing of the milky way (p. 225) is very faulty, while Common's superb photograph of the Orion nebula is utterly ruined by the coarse cutting of the gravers. The typographical accuracy is noteworthy—we have observed a single error, p. 233, where the initials of the well-known discoverer of double stars should be transposed. The reader familiar with the original researches of other workers in like fields with Professor Langley will not fail to observe the pleasing fulness of his notice of what they have done. Now and then his own painstaking investigations are only touched upon—or entirely passed over—with a grace of modesty which comes near depriving the reader of what he has a right to expect. A copiously full index, with cross-references, is a great help in recalling special passages. Professor Langley has made a thoroughly fascinating book—fascinating in the matter to which it relates, and no less fascinating in the way the story is told. We may justly expect it to arouse an interest in the "new astronomy" no less than the personality of Mitchell nearly half a century ago aroused in the old.

In the 'Outlines of Physiography,' Mr. Lockyer will essay a survey of Nature with strict relation to the Earth's place therein, especially, though not exclusively, from the standpoint of modern physical astronomy. Such a theme calls for breadth of view and philosophic treatment. With the steady progress of physical science, the Earth has dwindled in significance as man has grown older: it began as the centre of the universe; it is now reduced to a small mass of matter revolving round a small star. But proportionally as the Earth's place in nature has thus been subject to continual degradation, so has man's mental horizon been extended. For the purpose in view, exhaustive treatment of "the movements of the Earth" is not required. Prefacing his work proper with useful chapters on the measurement of angular space and the measurement of time, the Earth's axial rotation is first discussed, and then its orbital revolution: while, finally, the results of both rotation and revolution are considered. There is no lack of general balance, and the whole work is written in Mr. Lockyer's clear and easy style. He excels in the apt choice of subjects for illustration, of which there is an abundance.

In his little treatise on 'The Asteroids,' Dr. Kirkwood, the American "authority" on small planets, if we may so say, makes on behalf of this unique system of bodies a fair claim for more particular attention than it has hitherto received. Their number is undergoing rapid increase. The rival discoverers are still at work—Peters of Clinton, who has found nearly fifty new planets, and Palisa of Vienna, whose string now counts three score and over. If present indications are to be trusted, the total number of small planets known in 1890 will reach 300. Much tabular and statistical matter regarding the group is clearly presented in part i of this book, while part ii deals with the very interesting questions of the origin of the ring, and the relations of its various zones to the comets of short period. If ultimately established, this latter connection will more than compensate astronomers for the deal of drudgery, observational and calculative, imposed by the growing multitude of known bodies between the orbits of Mars and Jupiter.

A late President of the Royal Astronomical Society, in presenting the gold medal of the Society to an amateur astronomer a few years since, directed attention to the fact that the amateur who can provide himself with sufficient instrumental means for original research need fear no professional rivalry; it is, indeed, from this class of workers that the most striking advantages in astronomy are to be expected. It was a good idea to bring together in a single manual such information as the amateur is most in need of—to show him what work is worth doing, to guard him against wasting time on work not worth doing—in fact, to indicate clearly the most effective methods of using such instrumental means as he may possess. One has only to read such "reports of observatories" in America as were issued by the Smithsonian Institution seven or eight years ago, to become astonished at the vast amount of well-made astronomical apparatus scattered throughout the country, and at the utterly aimless manner in which a good deal of it is used. The many-authored little volume before us, 'Astronomy for Amateurs,' is intended to relieve this false relation. Among the writers who contribute special chapters are Sir Howard Grubb, Burnham, Maunder, and Denning, well-recognized specialists.

With a dozen authors it is not remarkable that some important points should have been passed with insufficient treatment, while others are omitted entirely. Had each writer set out to make plain the precise relation of the known to the unknown, or of the known to that which is worth trying to find out, the result would have been better adapted to the end in view. As it is, the work as a whole is too little different from previous manuals for the telescopist. Perhaps the amateur is not supposed to know more than he usually does, but he is surely presumed to have more of the astronomic sense than he usually has. We cannot enter upon detailed criticism of the individual chapters, but we notice at the outset, in Sir Howard Grubb's treatment of the telescope, the omission of Lord Lindsay's clever device for converting the usual form of alt-azimuth stand into an effective equatorial mounting, knowledge of which is of prime importance in manipulating such telescopes as amateurs are most often provided with. After informing the hopeful reader that the small planets are mostly beyond the reach of his telescope, what sense is there in filling up a half-dozen pages with a mere enumeration of these bodies, such as may be found anywhere? We cannot say whose fault it is, if not the editor's, that the different parts of the work show a lack of relative balance. Impertinent details occupy pages when mere lines would have done. Misprints and misstatements are few. If the almost entire absence of illustrations is unfortunate, the lack of an index is more so.

The time has long since gone by when a new astronomical work by Mr. Proctor was likely to create any surprise. With his 'Old and New Astronomy,' of which part i has come to us, he has taken possession of a field from which no Anglican harvest has been garnered for many a year, and much good seems like to come from his reaping.

"The meaning of the stupendous celestial mechanism, the beauty and harmony of the celestial architecture, it is not for the Flamsteeds, the Maskelynes, and the Airys—useful, nay, essential though their work may be—but for the Newtons and Herschels of astronomy, to investigate. It is the celestial scene as viewed and studied by philosophers such as these, not merely as surveyed in Government observatories, that I propose to contemplate in the present volume; for astronomy, regarded as a means of philosophic training, owes almost all its value to men of the former type, scarcely any (though commerce owes much) to those of the latter" (p. 9).

If the style of the introduction smacks a little of Dick, Chalmers, *et al.*—astronomical authors slightly off color nowadays—we readily pass by on the other side when we reflect that a little of this sort of thing, now as in their day, is wholesome for inspiration's sake; while there is more than enough of compensation therefor in the high place the author assigns to Huxley's "first commandment of Science" (p. 3). Mr. Proctor makes no error in going well into the ancient astronomies. "We cannot," he says, "rightly apprehend either what ancient races achieved, or what they failed to achieve, in astronomy; we cannot rightly understand the edifices they erected or the labors they undertook in pursuance of astronomical observations, unless we perceive and admit that, among them all, astronomy was the servant of astrology, and astrology the high priest of religion" (p. 17). So he gives the prominence he ought to the pyramid of Egypt—"observatory, tomb, and temple"; to Sir Robert Barker's account of the massive stone instruments of the ancient observatory of the Brahmins at Benares; and to the Gentur Muntur (Royal Observatory) of Rajah Jeysing built at Delhi near the beginning of the eighteenth century. Oriental research shows the significance of such structures more and more; and the day may come when discoveries in the astronomy of the ancient peoples of the earth will contribute to the further refinement of the modern theories of the celestial motions, and thus possess far more than merely archæologic interest. Entire absence of the mediæval astronomy, Arabic and other, seems to us too prominent an omission, but that may well come in later. The relations of

the ancient instruments to the modern are duly emphasized, and the fact clearly shown that, in so far as abstract principles go, the instruments of centuries ago were quite the equals of our own. With few exceptions the cuts are well chosen, and nearly fulfil the publisher's promise in the prospectus.

Flora of the Hawaiian Islands: A Description of their Phanerogams and Vascular Cryptogams. By William Hillebrand, M.D. Annotated and published after the author's death by W. F. Hillebrand. B. Westermann & Co. 1888. 8vo, pp. 673, with maps.

THIS archipelago has peculiar charms for the naturalist, owing to its extreme isolation. We expect to find islands which lie near the mainland or in close proximity to other large islands, clothed with vegetation borrowed from their neighbors. But, in the case of islands which are remote from all other land, the naturalist is forced to ask whether there might not have been, in geological times, some path from a now distant shore by which plants could have made their way; failing this, he is obliged to note the direction and force of ocean currents on which seeds and fragments of branches might have been borne. These questions have a remarkable degree of interest in regard to the Hawaiian or Sandwich group. If we except a few islets and reefs, the group stands alone. The nearest large islands are a trifle less, and the western shore of the American continent a little more, than two thousand miles away. Hence the Hawaiian vegetation affords an exceptional field for the examination of the question of variation within a limited geographical area.

The plants of the islands have been examined by a good many explorers, and large collections are to be found in all the principal herbaria, but, up to the present year, the results of the systematic studies have been widely scattered through journals and occasional publications. Now, however, these *disjecta membra* are gathered together by one who knew what place each part should properly take, and from the well-arranged material can be obtained many answers to questions of variation.

Dr. William Hillebrand, a German physician with a marked taste for the study of natural history, and with special qualifications for the pursuit of botany, resided for about twenty years in the islands, collecting and cultivating the plants around him, devoting to this work, as did our lamented Engelmann in his study of our flora, the scanty leisure left by the exacting practice of his profession. But, alas! also like Engelmann, he was not permitted to see his works brought together in a published form: the task of collating and revising has been done by other hands. Further, like Engelmann, Hillebrand has been fortunate in his editor: the 'Flora of the Hawaiian Islands,' which he had nearly finished, has been brought to completion by the loving care of a devoted son, who unites sound judgment with minute accuracy. The younger Hillebrand has wisely left unchanged in any great degree certain general and incomplete notes from which the lamented author would doubtless have framed a full account of the geographical botany of the islands. Although fragmentary, these notes are of high value, and in their unmodified form serve to indicate how great is our loss in the death of Dr. Hillebrand. It will be interesting to examine briefly some of them, because they throw considerable light on the general problem of variation.

First, as to the relations of the islands to the main land. Soundings show that there extends northwest a narrow band of raised sea-bottom, with an average depth of less than 1,000 fathoms:

"This line of reefs follows exactly the trend of the fissure in the globe's crust on which the Hawaiian volcanoes have been built up; and as there is abundant evidence that the age of the different islands of the group increases from east to west, it is fair to conclude that these islets, rocks, and reefs lie on the same fissure, and are only the coral-covered peaks of submerged older volcanoes, or, in other words, that the volcanic action commenced at the northwest extremity, thirty degrees of longitude northwest from the Island of Kauai, and gradually moved on to the island of Hawaii, with subsidence of the older formations while it progressed. But the western extremity of this raised sea-bottom land is separated by a great distance and enormous depths of sounding from the nearest high land, Japan, and the circumstance that the present flora of the Hawaiian Islands has less affinity to that of Japan than to any other warm or temperate country on the borders of the Pacific Ocean, forbids altogether the assumption that this submerged chain of islands can at any time have formed a road for the migration of plants."

A study of the ocean currents has convinced the author that the case does not stand much better with them than with respect to the other question. But even if the currents flowed in such directions as to carry plants towards the islands from either the lower coast of America or from the Moluccas, the transference by such currents is attended with many perils which very greatly diminish the number of actual survivals.

Second, the climate and the soil of the islands give us a wide scope for variations. "A single day's march will carry the traveller from the tropical heat of the coast to the region of perpetual snow; and in crossing the breadth of an island he may pass from a climate with an annual average of 180 inches of rainfall to one of 30 inches or less." Although the soil is generally uniform, there is one striking exception: the valleys have a heavy retentive clay, but the ground is for the most part pervious.

Now, lastly, in such a climate, and under conditions where foreign intruders could be so few, what are the native plants? "Deducting 115 species introduced by man since the discovery, and 24 which probably came in before that period, there remain 860 species of flowering plants and ferns as original inhabitants of the Hawaiian Islands, distributed over 265 genera, and of these 860 species 653 are peculiar to the islands." Well may the author say, "Nature here luxuriates in formative energy." This he illustrates by a clear statement of the facts in regard to the ferns, which in the islands reach a marvellous degree of development.

Owing to the innumerable intermediate forms, the author has been forced to abandon the conventional limits of description, and although he apologizes for this, as if it might indicate a certain tendency to prolixity, he has, by his detailed descriptions of varieties, furnished most interesting material for the study of variations. Again we say that the editor has done wisely in not changing in any essential features the nature of his father's plan. The work is a noble monument.

Select Pleas of the Crown. Vol. 1. A. D. 1200-1225. Edited for the Selden Society by F. W. Maitland. London: Bernard Quaritch. 1888.

WE have already briefly referred to this important first volume of the publications of the Selden Society. The cases here reproduced and translated occurred at a very important period in the history of the law. In Mr. Maitland's 'Pleas of the Crown for the County of Gloucester,' in 1221 (Macmillan, 1884), he says:

"This was the first eyre held in Gloucestershire since the abolition of the ordeal. We thus catch sight of trial by jury at a most interesting and critical moment of its development. A greater number of remembrances may be called up by saying that this was the first eyre in Gloucestershire after the grant of the Great Charter. The charter, it will be remembered, was sealed on 15th June, 1215."

And of the contents of that book, he added:

"It is a picture, or rather, since little imaginative art went to its making, a photograph of English life as it was early in the thirteenth century. . . . We have here, as it were, a section of the body politic which shows just those most vital parts of which, because they were deep-seated, the soul politic was hardly conscious—the system of local government and police, the organization of county, hundred, and township."

All this has its application to the contents of the present volume. These are made up of selections from eyre rolls in the reign of John, from 1201 to 1203 inclusive, and in the reign of Henry III., from 1221 to 1225 inclusive; and from other plea rolls, of the King's chief court (whether at Westminster or following the King in his wanderings)—in John's reign, from 1200 to 1214 inclusive, and in Henry's reign during the four terms of 1220. The distinctive character of these rolls—both those of the "central" and "what we may call the visitatorial courts"—as well as of the tribunals themselves, are pointed out by Mr. Maitland in a very clear and simple way, and with an engaging but unobtrusive charm of style that is very seldom found united with so much learning.

The "eyres" were the iters or circuits of the King's itinerant justices. But the King himself in these early times was also itinerant, and wherever he went, went also, in a pretty literal sense, the fountain of justice. It was only by the Great Charter of 1215 that it was first fixed that common pleas should no longer follow the King; but even then a court of judges and pleas of the crown still followed the monarch wherever he went. What this meant to judges and suitors may be seen by looking at the "Itinerary of King John," from which Sir Henry Maine quotes in chapter vi. of his 'Early Law and Custom.'

"I take," he says, "almost at a venture May of 1207. On the 1st of May the King is found at Pontefract; on the 3d at Derby, on the 4th at Hunston, on the 5th at Lichfield, on the 8th at Gloucester, on the 10th at Bristol, on the 13th at Bath, on the 16th at Marlborough, on the 18th at Ludgershall, on the 20th at Winchester, on the 22d at Southampton, on the 24th at Porchester, on the 27th at Aldingbourn, on the 28th at Arundel, on the 29th at Knep Castle, and on the 31st at Lewes."

Maine gives further equally surprising illustrations of this wandering habit, and observes that these are no exceptional instances of activity.

"This was practically his life during every month of every year of his reign. King John passes for an effeminate sovereign, but no commercial traveller of our day, employed by a pushing house of business, was ever, I believe, so incessantly in movement, and for so many successive years, with all the help of railways."

All this wandering is regarded as a survival from a much earlier day.

"These ancient kings were itinerant, travelling or ambulatory personages. When they became stationary they generally perished. . . . With the sealing of the Great Charter, the early history of the relation of the English King to civil justice comes to a close, and the modern English judicial system is established." "He sealed Magna Charta at Runnymede on June 15, 1215, and before July 15 he had been over the whole South of England, and again northwards as far as Oxford. Meantime the judges of the Common Pleas were sitting—as they did ever since till the Court of Common

Pleas was absorbed the other day in the High Court of Justice—at Westminster, and at Westminster only."

By the Assize of Clarendon in 1166, the mode of trial in the principal pleas of the crown was fixed as the ordeal of fire or water; compurgation, the older form of trial, was, by construction, abolished. Then in November, 1215, the fourth Lateran Council, in effect, abolished the trial by ordeal by forbidding any ecclesiastic, which was as much as to say any judge, to take part in allowing it; and this was accepted and recognized in England in the third year of Henry III. (1219), in royal writs addressed to the itinerant justices, which suggested no substitute for the ordeal, and commended all that was left unsettled to the sound judgment of the justices themselves. They seem thereafter, in the exercise of this discretion, by consent of the accused and otherwise, gradually to have introduced the trial by jury in the chief classes of criminal cases. This system of trial, in certain civil cases, had lately come in, and had worked well. In criminal cases, also, it had been sometimes resorted to, by the King's special license. And now it offered a way out of the singular difficulty which had just befallen the administration of the regular criminal justice of the country. It is here that we seem to find the origin of our wholly peculiar system of a double jury in criminal cases—the prototype of the grand jury being found in the accusing inquest which had been provided for in the Assize of Clarendon and was still continued.

The cases in this volume, as we have already said, illustrate the law of criminal trials during the very grave and important transition period when these great events were coming on and happening and passing by. We are sitting at the cradle of trial by jury in criminal cases, an institution which English-speaking people have always accounted sacred. Here also we find the ordeal in force; as in a case before John, at Wells. Early in his reign, "William Trenchebof was said to have handed to Inger of Faldingthorpe the knife wherewith Inger slew Wido Foliot. He is suspected [*malecreditus*] thereof by jurors. Let him purge himself by the water. . . . He has failed and is hanged." Mr. Maitland remarks that this is the only case of a failure at the ordeal that he has found. "Success seems common." Of the old criminal appeal and the award of trial by battle there are many instances. The cases are full of quaint and circumstantial narrative, opening a window into the every-day life of the times.

Indices of persons and places are given, which have a value of their own. Appended to the volume are several important circulars of the Selden Society describing the character of the work which it has undertaken; we commend these to the attention of our readers. It should be added that the volumes of the Society can be obtained of Quaritch, but only at a price considerably above the annual subscription of a guinea, which secures membership in the Society and a copy of its publications for the year.

Tenting on the Plains. By Mrs. E. B. Custer. Charles L. Webster & Co. 1888. 8vo, pp. 702, with illustrations.

Mrs. Custer has broken open and lavishly exposed her memories of military life in Texas and Kansas during the two years immediately following Lee's surrender. Again, as in 'Boots and Saddles,' we are taken directly into her home, and share her daily hopes and fears, see the courage and adroitness with which she repressed all ills, great and small, that might interfere with her presence near her husband, and witness, if not partake of, the felicity that crowned her life when he was by her side. The book is as open as the sky. The dark clouds and the bright stars are not plainer than her trials and her joys, while there is always the central figure whose presence makes day, and whose absence is night. So plenary a revelation would not be pleasant were it less ingenuous; but it is the spontaneous unfolding of a young wife's devotion, as unaffected and as natural as the development of a flower. The wonder is how, in all their fresh detail, the features of those long-past wandering years can be reproduced. She well may exclaim, "Blessed be our memory, which preserves to us the joys as well as the sadness of life!"

All the characters presented are real, but after the two central figures, decidedly the most attractive is Eliza, the General's colored cook, well known in the field in his cavalry division and beyond, and now introduced to a much wider circle, where there is no doubt she will be duly appreciated. Eliza's practical sense and strong individuality make her an important personage in the kitchen and in the book, and it is a pleasure to observe that prosperous, but still enthusiastic, in her maturer years she is a substantial co-laborer in the preparation of this volume. What Eliza said and did comes next to the doings of the heroine.

But the book is not meant to be a mere chronicle of the small beer of domestic pleasures and trouble and nothing more. It is a record of marches through Southern swamps and forests, of northers on land and a hurricane at sea, of perils by Indian warfare, by cholera, by floods—all serious and sometimes disastrous. Its public value consists in its presentation of the constant trials and privations, as well as of more heroic adventures, that befell the troops when "there was no wild clamor of war to enable them to forget the absence of the commonest necessities of existence." It also commemorates the hardships, personally observed, of those pioneers who, pressing back the savage and redeeming the desert, have made Kansas within so short a period a land of wheat and corn. This unvarnished but very true account of daily life on a frontier that is now contracting, but has not disappeared, is instructive to those to whom "the army in peace" is a contradictory, if not a meaningless, phrase.

With her extreme frankness, the author exposes some of the social infelicities of her earlier garrison life, due to the heterogeneous material of which the new regular regiments were organized in 1866. When bravery under fire and political influence were the chief determinants in securing commissions, it is obvious that other sterling qualities, to say nothing of the graces of life, were to be found chiefly by good luck. But we believe we are justified in saying that the crooked sticks and odd fish that appeared in those earlier scenes have been fairly eliminated long since, with a corresponding elevation of the social tone following.

The book is an odd mixture of grave adventure and minute family detail, and its occasional lapses in style, in English, and in syntax, with its sprightly unconventionality, only emphasize the real vigor of much of the original matter. Among the various incidents selected for quotation, space barely allows reference to one: the flood by night on Big Creek, when their own lives and many others were in danger, when seven men were drowned, and when Mrs. Custer, Eliza, and a clothesline rescued one nearly perished wretch. Mrs. Custer paints the setting, but Eliza tells this tale most dramatically. Although somewhat overgrown, this volume may fairly take its place by its chronological successor, but actual precursor, 'Boots and Saddles.' It is published in a style similar to Grant's memoirs, from the same press.

Ethics of Boxing and Manly Sport. By John Boyle O'Reilly. Boston: Ticknor & Co.

One-third of this book is devoted to boxing and collateral questions of diet and training; and if Mr. O'Reilly had omitted twenty-five pages of padding, about Olympic games and Roman gladiators, in regard to which the classical dictionaries contain ample information, this part of the book, in spite of some faults, would have been quite satisfactory. The illustrations are very clever, the scientific exposition of the mysteries of the manly art is sufficiently clear to satisfy the most exacting critic and the chapters on "Diet" and "Exercise for City Dwellers" are of real value, both to young men and maidens. Mr. O'Reilly is an enthusiast on the subject of boxing, although he condemns the brutality of fighting with bare fists, and he claims for his favorite sport that it is the most perfect of all exercises, and that "the knowing how to fight makes common men self-reliant and independent." These virtues have often before been claimed for boxing, and it is worth while to consider the justice of the claim. It is undoubtedly true that in boxing a man brings into play almost every muscle of his body; but those who are opposed to boxing, on the ground that its tendency is almost inevitably to brutalize, may fairly claim that rowing, wrestling, base-ball, foot-ball, and swimming are very nearly, if not quite, as good exercises, while, from the ethical point of view, they are distinctly superior. The second virtue claimed for boxing is open to grave doubt; for the fighting that is done on modern battle-fields is of a kind that has little in common with boxing, while, on the other hand, there is always a risk that the youth who becomes a clever boxer may become a quarrelsome bully. In this connection, it is worth while to note that whereas boxing was very popular among the athletic clubs of New York ten years ago, it is now entirely neglected, so much so that it is only practised by amateurs of doubtful standing, and by semi-professionals. But whatever may be the conclusion in regard to the general merits of boxing, Mr. O'Reilly has certainly said all that can be said in its favor.

The remaining two-thirds of his book have nothing to do with boxing; nor does the second section, which consists of a long and very uninteresting account of the ancient weapons of Ireland, wielded by Cuchullin and other unpronounceable heroes, bear any sort of relation to the rest of the book. This mythical discourse has, to all appearance, been thrown in as an afterthought, either to round out the book, or from an economical desire on the part of the author to turn to some account materials collected for other purposes.

In the last hundred pages Mr. O'Reilly returns to the present day, and gives an admirable account of several canoeing trips on American rivers. His descriptions of scenery and of the charms of camping out betray the poet, and to most readers these last chapters will appear decidedly the best in the volume. They are more carefully written than the pugilistic part of the book, which shows signs of having been put together in haste—possibly to take advantage of the recent revival of Sullivanism. In one of the early chapters, for instance, Mr. O'Reilly writes: "The games were opened to all Greeks. There was no *exemption*—except for women"—a sentence which does not seem

to convey any clear meaning; while a little further on may be found the remarkable statement that "in 1877 a Turkish iron-clad moved at the terrible speed of thirty miles an hour." This is haste indeed!

If Mr. O'Reilly had cut out about 125 of his 350 pages, and had taken a little more pains with the remainder, the result would have been a very enjoyable book instead of an uneven and, on the whole, a disappointing one.

Our Republic: A Text-Book upon the Civil Government of the United States, with a Historic Introduction. By Prof. M. B. C. True and Hon. John W. Dickinson. Leach, Shewell & Sanborn. 1888. Pp. vii, 264.

THE publishers' circular accompanying this book announces that it is "ample in its treatment, . . . scientific in its methods, . . . accurate in statement." The best commentary on their opinion may be found in a few extracts. A book on Civil Government can hardly be called "ample" which gives but two pages to a description of local and municipal government (pp. 43–45); and four more to the State governments (pp. 39–42). For grammar-school instruction, it is not "scientific" to introduce, without definition, such legal terms as "committee-delegates" (p. 20), "common law" (p. 33), "presentment" (p. 53), "sold upon execution" (p. 64), "conveyances" (p. 69), "Act of God" (p. 74). The degree of accuracy may be judged from the following statements: "Pennsylvania. This State was granted to William Penn in 1681" (p. 13); "The adoption of the Constitution [1787–88] changed the colonies into States" (p. 22); "The Convention adopted the Constitution, September 17, 1787, and its members from all the colonies, except those from Rhode Island, signed it" (p. 25); "The district attorney is the prosecuting officer of the county" (p. 43); "To have the privilege of suffrage, a person must be a citizen of the United States" (p. 45); "The district attorneys and other marshals" (p. 128); "There is little reason for any regulation of commerce between the States" (p. 105); "Inside its own territory the State authority is supreme" (p. 128). The book is full of similar inexcusable and misleading errors.

Society in Rome under the Cæsars. By William Ralph Inge, M.A., Fellow of King's College, Cambridge, and Assistant Master at Eton. Charles Scribner's Sons. 1888. 12mo, pp. 276.

MR. INGE'S essay obtained the Hare prize at Cambridge in 1886. It consists of ten chapters, headed "Religion," "Philosophy," "Morality," etc., and may be recommended as containing an accurate, well-digested account of the subject under consideration. All sources of information appear to have been diligently used, and the view of society is fair and truthful, equally removed from the undiscriminating denunciation indulged in by too many moderns, and the opposite fault, of extenuating the evils and immoralities of the times. It is rather a description than a picture—certainly a safer undertaking, and perhaps more generally useful; but we should say that the best treatment of such a subject, if it were a possible one, would be a graphic presentation, with abundance of illustrative incident, such as should give the treatise something of the characteristic of a good novel. Mr. Inge has had a different aim, and has succeeded where, if he had tried the other method, he might have failed.

A real defect is the failure to look below the surface. Society as it was in the first centuries is very truthfully delineated, so far as was possible with the materials at hand; the author laments that the accessible materials make it necessary to confine his view for the most part to the upper classes of society. But there is one kind of evidence of which he has not made the most—the drift and tendencies of society, which were, of course, concealed from contemporaries, but which we, looking back from a distance, can discern clearly. The second century shows vast changes in society, on the whole for the better; Mr. Pater has thoroughly entered into the spirit of this in his 'Marius the Epicurean.' Now, the fault we find with Mr. Inge is that he does not make us feel that society was in *movement*—it is described too much as a fixed condition of things to be analyzed and catalogued, and not enough as a current of human passions and forces, leading to a well-known and, on the whole, improved state of society.

BOOKS OF THE WEEK.

Bell, A. M. World-English: the Universal Language. N. D. C. Hodges. 25 cents.
Benedict, Anne K. My Wonder Story. Boston: D. Lothrop Co.
Benedix, R. Doctor Wespe. Macmillan & Co. 75 cents.
Besant—Rice. By Celia's Arbour: A Tale of Portsmouth Town. Library ed. Dodd, Mead & Co.

The Nation.

NEW YORK, THURSDAY, JUNE 7, 1888.

The Week.

THE controversy in the House on Monday over the question of pension legislation serves to emphasize the recklessness with which the Republicans support every scheme of extravagance. Among the bills which they wanted to push through, the most important was one proposing to repeal the arrears limitation, and in this attitude they were only living up to the Republican national platform of 1884, which said: "The Republican party pledges itself to the repeal of the limitation contained in the Arrears Act of 1879, so that all invalid soldiers shall share alike, and their pensions begin with the date of disability, and not with the date of application." The lowest estimate of the amount which such a change would call for is three hundred millions of dollars, and the probability is that it would prove to be a great deal more. Yet there is no doubt that if the Republicans had carried the election of 1884, this immense job would have been carried through, and they are already giving fresh pledges to vote away these hundreds of millions if the people will restore them to power in 1888.

The Prohibition party perceived the fitness of making mention of the tariff in their national platform. It is instructive to observe that the Platform Committee, being under no partisan bias, took the common-sense view of the question—the view that is undoubtedly held by nine-tenths of the unprejudiced people of the country, viz., that the Treasury surplus ought to be reduced by repealing duties on the necessaries of life. The resolution reported by the Committee was as follows:

> "That an adequate public revenue being necessary, it may properly be raised by import duties and by an equitable assessment upon the property and the legitimate business of the country; but import duties should be so reduced that no surplus shall be accumulated in the Treasury, and that the burdens of taxation shall be removed from food, clothing, and other comforts and necessaries of life."

This is what the average citizen believes and is ready to vote for. If the platform of the Prohibitionists had been left as it was reported and unanimously adopted, it would have been complete and satisfactory. But at the evening session a Pennsylvania delegate proposed an additional paragraph which was adopted in these words:

> "And imposed on such other articles of import as will give protection both to the manufacturing employer and the producing laborer against the competition of the world."

The platform as thus finished is a concession to protectionism, but is by no means sufficiently so to meet the requirements of the tariff Republicans, whose record as made up in the House of Representatives is against any reductions of protective duties whatever, whether on the necessaries or on the luxuries of life.

There was a long letter in the *Times* on Monday, apparently inspired by somebody in the Treasury, which was doubtless intended to explain "the sugar frands," but, unhappily, explains nothing. It is simply a very verbose plea that it is a shame to suspect such excellent men as Mr. Maynard and Mr. Fairchild of making mistakes. Some of its statements are really astonishing. But supposing them to be all true, how are we to account for the fact that only three or four underlings in the Appraiser's Department were removed, while the Appraiser himself, Mr. McMullen, and other chiefs who approved of these subordinates and vouched for them, were left untouched? And what about Deputy-Collector Davis, the Broome County politician, and his ten Binghamton "heelers"? Was it all along of those "sugar frauds" that these gentry were allowed to leave their work to run caucuses and conventions and speculate in post-office sites in Binghamton?

The defeat of Mr. J. B. Eustis for re-election to the United States Senate from Louisiana is a matter for congratulation, and carries with it some instructive lessons. Mr. Eustis was, we think, the first leading Democrat in the country to denounce the civil-service policy which President Cleveland adopted at the beginning of his Administration. In an interview to which he subjected himself in April, 1885, before the President had been in office two months, he spoke as follows: "You can say for me—and you cannot say it too strong—that in my judgment Mr. Cleveland, from a Democratic standpoint, has been a conspicuous and humiliating failure. . . . The fact that a horde of unscrupulous, ignorant, dyed-in-the-wool, and offensively partisan radical leaders are permitted to remain in office all over the country under Democratic rule, and in direct violation and contradiction of the very principles of Democracy and the wishes of a majority of the people as expressed at the ballot-box, is a shame and a disgrace, and a reflection on the competency, capability, and character of those whose suffrages placed Mr. Cleveland in the White House. . . . The Democratic element will see to it that this Administration is Democratic in the full significance of the term, or that Mr. Cleveland and his Cabinet shall fall and be buried in the ruins they have made." This talk was eagerly reproduced by the *Sun* and similar advocates of the spoils doctrine, and pointed to by them as the beginning of the revolt that the President was preparing for himself. In private conversation Eustis did not hesitate to say that he cared nothing for the doctrine of the thing, but that he meant to make himself "solid" with the Louisiana legislators. Instead, however, of seeing the President and his Cabinet "buried in the ruins they have made," he finds himself retired to private life by the very legislators whom he thought his demagogism would please, and this only a week in advance of the date on which the President was to be unanimously renominated. The defeat of such a man as Eustis ought to give the President a good deal of information as to where his real strength in his party and throughout the country lies.

The most interesting and encouraging feature of the message submitted to the Louisiana Legislature by Mr. McEnery, the retiring Governor, was the passage devoted to education. It opens with the statement that since the last session of the General Assembly there has been a greater interest manifested in the cause of education throughout the State than at any time in the previous history of Louisiana, and declares that "the people will approve of any legislation that will promote this great interest." Mr. McEnery recalled the fact that in previous messages he had urged legislation in behalf of an enlarged and enlightened system of public education, and insisted that "to effect this the hard fact of local taxation must be resorted to." This is recognized as a necessity in the Constitution of the State, but unfortunately that instrument restricts the amount of taxation and does not permit the parishes (which correspond to counties in the North) to levy so large a local school tax as is required. Mr. McEnery therefore recommended that the Constitution should be so amended as to permit each parish to levy a tax sufficient, with the State tax, to keep the public schools open eight months in the year, and an act proposing such an amendment has since been introduced in the Legislature. The only thing Louisiana has ever lacked to secure good schools was a readiness on the part of the people to tax themselves enough to provide such schools; and the most hopeful feature of the present situation is the evidence that they are at last showing a willingness to put their hands in their own pockets, instead of trying to get them into the Treasury at Washington.

The change in St. Louis journalism which occurred during the week is of far more than local interest. The *Republican*, a Democratic paper which dates back to the early years of the century, and whose name has grown a misnomer during the last generation, has become the *Republic*, and it has a new management as well as a new name. The incoming editor, Mr. Charles H. Jones, has proved his quality by building up the *Florida Times-Union* into one of the most influential papers in the South, and he is excellently fitted to improve the wider opportunity which now opens to him in the West. The policy of the new management, as outlined in the first number, commits the *Republic* to the advocacy

of tariff reform, civil-service reform, and reform in liquor legislation, and the paper promises to be a great power for good. The change is the more noteworthy and hopeful from the fact that the old *Republican* had come to be a Bourbon sheet, while the position which it occupied is one that ought to be filled by a thoroughly progressive journal, such as the *Republic* is sure to be.

"The excitement" in Memphis, Tenn., "is intense," we learn, and "further trouble is feared," which is not surprising, considering that Kennedy Porter, a son of ex-Gov. Porter, who was severely shot some weeks ago by Will Edmunds, for paying attention to Miss Edmunds, having recovered his health, determined on Monday to murder Will on sight. He accordingly "opened fire" on him in the street, and they exchanged nine shots in all, Edmunds being badly wounded and Porter escaping on horseback. Two hours later Alexander White, the cashier of the Commercial Bank of Paris, Tenn., was telling about the fight to a friend in the street, when Dudley Porter, the brother of Kennedy, happening to pass by and overhearing what he was saying, was dissatisfied with his version of the affair, and sought to amend it by informing White that a certain passage in it was a "damned lie." White refused to accept this amendment, and determined to murder Porter for offering it, and accordingly shot him dead. We ought to add that the relations between these two gentlemen were already strained, owing to Porter's having murdered White's brother on a previous occasion. We need hardly say that all the combatants belong to the first families in Tennessee, and that the affair is greatly deplored.

The action of the two Presbyterian Assemblies on the question of organic union has the appearance of a game at cross purposes. The Northern body went to the very extreme of concession and conciliation, adopted a report which had been beforehand freely condemned as giving the whole case away to the Southern Church, and appointed an enlarged committee to renew negotiations. But the Baltimore Assembly dashed the entire scheme by voting by a large majority that organic union was impracticable. This leaves the Northern Church in the very awkward position of having confidently held out a hand only to have it refused. The decision of the Southern Assembly in the Woodrow case certainly lends color to the belief that the Presbyterians of the South are much more sensitively conservative than those of the North. We do not believe that the astounding deliverance on evolution could have been put through the Northern Assembly, even under the spur of theological terrorism with which ecclesiastical bodies are so often ridden. At any rate, with an acknowledged evolutionist at the head of one of its committees, the Philadelphia Assembly would have seemed rather more absurd in passing such a resolution than did the Baltimore gathering.

The Massachusetts Ballot-Reform Bill has been presented for enactment in the Rhode Island Legislature, and its passage is earnestly recommended by the leading journals of both parties in the State. As the quality of the new Legislature is unusually good, there appears to be an excellent prospect for the bill to become a law. Certainly there is no State in the Union where such a law is more urgently demanded, for there is none in which the use of money in elections is carried on more openly, or one in which its influence has been more demoralizing and degrading. Even in the South it would be difficult to find a community in which the moral sense upon the crime of corrupting the ballot-box is more torpid than it is in the intelligent and virtuous State of Rhode Island. The argument that the Republicans must use money because the Democrats do, since that is the only way by which to keep the wicked Democrats out of power, has for years carried all before it. The proposed law would put an end to this style of reasoning, for under it no party would use money to buy votes, for the simple reason that it would be impossible to follow the bribed voter to the polls to see if he voted in accordance with the sale.

The substitution of electricity for hanging in the infliction of capital punishment, in the bill which the Governor has just signed, will put an end to a great deal of revolting barbarism. There never was a word to be said by anybody for execution by hanging, except that it gave a chance for the infliction of torture on the culprit through the vigor of his constitution, or the unskilfulness of the hangman, and afforded the spectators a very brutalizing show. In fact, it was its spectacular possibilities which first commended it to English jurisprudence. The criminal was hanged because he could be seen dangling by thousands when the drop fell or the cart moved away, or could be left hanging as a warning to wicked passers by. The preservation of this mode of execution since executions have become private has been a cruel absurdity. Its horrors have been aggravated in this country, however, by our practice of making the criminal a sort of hero, and surrounding him with a savage pomp, after sentence has been passed. His cell has been open to all comers. Reporters interviewed him every day, and took down his observations on his trial, his denunciations of his prosecutors or jailers, and his maudlin reflections on his situation, and reported the flowers he received and the names of his "callers." All this is now to come to an end. There is to be complete seclusion after sentence. The day of the execution is not to be announced beforehand, and the infliction of the sentence to be witnessed by very few, and, although the body is to be delivered to the friends, wakes and public funerals are not to be allowed.

The most exasperating part of the Fishery Treaty to good Republicans is the *modus vivendi* under which American fishermen are allowed shore privileges by taking out licenses for which they pay $1.50 per ton per year. Any *modus vivendi* is bad, because there is danger that the fishermen will avail themselves of it, and thus get through the season without any other grievances than the payment of the money. But the worst kind of a *modus* is one which proves the falsity of the oft-repeated statement that we want nothing of Canada except what the Treaty of 1818 gives us. The Treaty of 1818 did not give us the right to buy bait, but expressly excepted that privilege. And now comes the schooner *Druid* from Newfoundland with a catch of 180,000 pounds of cod, and reports that both the American and the French fishing fleets had put in to Newfoundland for bait, and that the Americans had taken out licenses and procured all the bait they wanted, while the French were not allowed either licenses or bait. How much happier the condition of the Frenchmen must be, for they can go home with a grievance even if they have no cod. We have not heard of any retaliation bill in the French Chambers in consequence of this discrimination in favor of Americans, but perhaps it is too early to look for one.

The controversy still raging in England and Ireland over the Papal Rescript is one of the oddest of the many odd things which the Irish question has brought to the surface. The first queer thing about it is the eagerness with which the Rescript has been received by the Ministry and the Tory press as a means of putting down "the Plan of Campaign" and boycotting, in the presence of Mr. Balfour's repeated declarations that the Crimes Act has actually been successful not only in stopping the Plan of Campaign and in suppressing boycotting, but in extinguishing the National League itself, at least in a large part of the country. If this boast is justifiable, the Pope's assistance has very little if any importance. The second queer thing is the fierceness with which even the Unionist press in England maintains that the Rescript is sure to be obeyed both by the clergy and the people, against the vehement assurances of the Irish politicians that it will not be so obeyed. To rejoice over the strength of Papal influence in Irish politics is to run counter to all the strongest traditions of English politics. We believe it would be impossible to name an English statesman or publicist of the last eighty years who has not held that the strength of the Irish allegiance to the Catholic clergy and the Pope constituted the greatest difficulty in the government of Ireland by England. The spectacle of a large and respectable portion of the English public, therefore, chuckling over the continued obedience of the Irish people to the Church in secular matters, and denouncing those Irish laymen who oppose it, is undoubtedly one of the strangest spectacles of modern times. It surpasses in many ways even the spectacle of Horace Greeley running for the Presidency as the candidate of the Democratic party, the report of which, according to Mark Twain's

amusing burlesque, led Dr. Livingstone in the heart of Africa to denounce his discoverer, Stanley, as a liar, in very profane language.

Another very odd spectacle nearer home is the appearance of Mr. Chauncey Depew as a Blaineite candidate for the Presidency with all the appropriate fittings and furniture, considering that in 1872, when there were some remnants of rationality about the "bloody shirt" and other Republican properties, he ran as Democratic candidate for Lieutenant-Governor in this State, but came out 3,533 behind his ticket. It may of course be said, in explanation of this poor show at the polls, that he had not then fully displayed his remarkable powers as an after-dinner speaker, but we maintain, and we are sure that many gentlemen will corroborate us, that his stock of stories was better then than it is now; that the earlier editions of many of them were the best; and that, in short, his place as a humorist was higher about 1872 than it has ever been since. To those who maintain that humorous anecdotes go further in the Republican than in the Democratic party, and that Lincoln owed much of his influence to his "little stories," we answer that even Lincoln could have accomplished but little with his stories in a period of tariff controversy; that jokes in defence of the tariff are all but impossible; and that the only one of the least weight which can possibly be made on that side has already been made by Mr. Evarts, and is known as "The Three-Cent Joke," showing that the tariff only costs us three cents apiece. Mr. Depew may edit this, and put foot-notes to it, but he cannot improve on it, or utilize it for himself.

The complete failure of Gen. Boulanger in the French Chamber on his first appearance with his plan will not necessarily close his political career, but it must greatly discredit him. A Cæsar, or "saviour of society," who discusses is lost. None of the others, Julius Cæsar, Cromwell, or Napoleon, ever put themselves in positions where they could be answered or inveighed against publicly. The part which Boulanger played on Monday was, in fact, that of a parliamentarian, or "avocat," as the French love to call the glib-talking politician whom he denounces so much; and in a game of this sort, although he has made one or two good hits in debate in times past, he was sure to get the worst of it. Floquet mauled him badly, ruined his "dignity," a very serious matter in France, and presented him to the public in the attitude of a feeble, helpless man, in fact, anything but the stuff for a dictator. He still continues, however, to be the outward and visible sign of a discontent which is stronger in the country at large than in Paris, and which nobody seems quite able to explain further than that the low price of cattle and the failure of the vineyards have something to do with it. The French farmers have not, in fact, been so badly off since 1815, and have not got over the old habit of blaming the Government for low prices, and the doings of the Chambers have certainly not been calculated to make the Republic seem much of a providence.

Unusually full details of the dream of an era of universal peace may be found in recent numbers of the Munich *Allgemeine Zeitung*, which gives up twelve of its pages to an attempt to prove that the neutralization of Turkey would be the long-looked-for remedy for the political evils comprised in the term "the Eastern question." The writer proposes the abrogation of the Treaty of 1841 closing the Dardanelles to the vessels of war of all nations alike, and the adoption of an international agreement granting free access to the Black Sea to war ships of all flags. This measure would, in his opinion, be but the prelude to the neutralization of Turkey itself, that is to say, to an international control of the financial, judicial, and religious administration of its European provinces. The throwing open of the Dardanelles, or rather of the Black Sea, to the navies of Europe would be an insuperable barrier to Russian aggression in the Balkan Peninsula, while Turkey, deprived of the control of the straits, would cease to be alternately courted and threatened by the diplomacy of England, Austria, and Germany. The precedent for this kind of neutralization is found in the recently proposed convention relative to the Suez Canal, by which the freedom of the canal is to be guaranteed, through the joint action of the great Powers, to the navies of all nations, in time of war as well as in time of peace. The waters of the Congo Basin were similarly neutralized by the Berlin stipulations of 1885. The author of these suggestions fondly hopes that Russia, having abandoned her designs on Constantinople, would devote herself to the promotion of liberty in Warsaw and Moscow, and that Turkey would console herself for her loss of power in Europe by her new mission as a civilizer of Asia and Africa.

A very curious meeting of the new and the old occurred the other day in Turkey near the Servian frontier, on the opening of a continuation of the line from Belgrade which is eventually to connect with Constantinople. Before the Turkish train on the Turkish side of the line started, there was a delay to enable some Mussulman Imaums to sacrifice three sheep; and as sacrifices are not things which can be done in a hurry, the delay was a long one. The passengers, however, all took it very calmly, and, when the sacrifice was over, got into the cars and went their ways. We suppose the sacrifice was intended to give the train a good send-off, and at the same time to provide some mutton for the sacerdotal families.

In a recent address before the Royal Colonial Institute on "The New Industrial Era in India," Sir Wm. Hunter sounded a new note of alarm to the English farmer and manufacturer. After a rapid sketch of the growth of the foreign trade of India, from £9,500,000 sterling of exports in 1834 to £88,000,000 in 1884, he dwelt upon the progress made in the culture of wheat, of which the amount exported has increased tenfold since 1873, while the whole area under wheat in Great Britain is less than half that in the Punjab alone. With improved methods of agriculture, which are sure to come, he believes it impossible to set any limits to the ultimate dimensions of this crop. Oil-seeds show a similar increase. As regards manufactures, India's cotton and jute mills, having in 1884 2,000,000 spindles, and employing over 110,000 people, are already formidable competitors of the Lancashire manufacturers. Even iron-smelting has advanced to a stage at which its commercial success seems almost assured. In view of these facts he believed "that the world seemed now to be entering on a new era of competition — the competition between the productive powers of the tropics and of the temperate zone." One of the great economic questions for the coming "commercial Viceroy," who was what India, having had "conquering Viceroys and consolidating Viceroys," now needed, was in respect to the railways, which are a Government monopoly. Should the rates be kept high for the sake of revenue, or would the Government "content itself with the actual interest on its outlay, and thus give an enormous impulse to Indian agriculture, commerce, and manufactures by low charges of carriage? The reduction of railway rates in India meant a cheaper loaf for England." He did not, however, conceal from his audience the conviction that this "development of India as a manufacturing and food-exporting country would involve changes in English production which must for a time be attended with suffering and loss." Still, he was equally sure that it would in the end be a gain to England and to the world.

The British Government is almost at loggerheads with the Australian colonies on the Chinese question. They have for some time past levied a poll tax of $50 on every Chinese immigrant, and restricted the number to one for every 100 tons of the ship's burden. They now propose to prohibit Chinese immigration altogether, and ask the Imperial Government to follow the example of the United States by negotiating an exclusion treaty with China. This the Ministry thus far has declined to do, and even threatens to veto Australian legislation for the same object; the result is, great excitement in the colonies. Lord Carrington, the Governor of New South Wales, has sent home a despatch at the instance of the Colonial Premier, Sir Henry Parkes, in which the latter makes known that if the proposed treaty be not promptly negotiated, "the Australian Parliament must act from the force of public opinion in devising measures to defend the colonies from consequences which they cannot relax in their efforts to avert." As there is not the smallest interest in the matter in England, the probabilities are that the colonists will eventually have their own way.

MR. BLAINE'S LAST WITHDRAWAL.

When Mr. Blaine's letter to Chairman Jones, from Florence, dated January 25, was published, we said that whether it were sincerely intended to withdraw him from the list of candidates or not, it would have that effect and produce that result, because it would detach a large body of his supporters in every State, who would forthwith make new alliances and committals. We believed that a man of Mr. Blaine's experience as a political manager must have foreseen this, and hence that there were fair presumptions of an intention on his part to withdraw. Nevertheless, the language used in his Florence letter was ambiguous, since it did not say that he would not accept the nomination if tendered to him, but merely that his name would not be presented to the Convention. It was quite within his power to say that he would not accept the nomination. It was not within his power to say that his name would not be presented to the Convention, because any delegate could present it regardless of Mr. Blaine's wishes, and if one delegate could do so, a majority might do so.

Further doubt was cast upon the seriousness of the Florence letter by what followed immediately after the statement that his name would not be presented, for he proceeded to show what a magnificent gain the Republican party had made in 1884, when he was a candidate, over the result in the Congressional and State elections of 1882, laying especial emphasis on the result in New York, where Cleveland had been elected by 192,000 majority in the latter year, whereas he had won by less than 1,100 majority in the Presidential fight. The implication of this reminder was that his own name was a tower of strength to the party.

The Blaine men and the Blaine newspapers were at first stunned by the Florence letter, and for two or three days they said that it had taken their candidate out of the field. But when they had had time for critical examination of the text, they began to say that it was not a withdrawal, but merely a general declaration that, while not a candidate, he was "in the hands of his friends," and was "subject to draft," etc., etc. On this basis of false pretences his own State of Maine elected delegates in his favor, and, according to the claim of the Philadelphia *Press*, 377 delegates were chosen in his favor, a goodly number of whom were under positive instructions for him. All these proceedings went on without a word of remonstrance from him.

But now, after all the delegates, or all except an insignificant number, have been chosen, he writes from Paris expressing the surprise with which he learns that, notwithstanding his Florence letter, his name may yet be presented to the Convention. So, after ringing many changes on his astonishment that his valued friends could have so misinterpreted his Florence letter, he says: "Assuming that the Presidential nomination could by any possible chance be offered to me, I could not accept it without leaving in the minds of thousands of these men the impression that I had not been free from indirection, *and therefore I could not accept it at all.*" There are a few of the Blaine faction who think that there is still room for doubt. They point to the similar language used by Gov. Seymour in 1868, and speculate upon the chances of an interminable struggle in the coming Convention which shall make Mr. Blaine a necessity. We beg to remind these enthusiastic squires of the Plumed Knight that this is not the year 1868, and that Mr. Blaine is not Gov. Seymour, and that the Republican party is not the Democratic party. Mr. Blaine is "out" now. By whatsoever means he got out, he is out for good and all.

We are thankful for this, because we can now look forward to a campaign upon principles. There is reasonable assurance that the next President of the United States will be one upon whose personal character no stain rests. He may be a spoilsman in the party sense. He may be a high-tariff man or anything politically obnoxious to our conceptions of what is best for the country. But he will not be the author of the Mulligan letters, or of any letters that need to be burned in order to qualify him to receive the votes of his fellow-citizens. The country has made that much gain. When we look back at the twelve years' struggle to keep Blaine out of the White House, these letters all the time staring us in the face, we are bound to say that it is a great gain.

The question, Who comes next? is the momentous one for the Republican party. Judge Gresham is, in our opinion, the strongest man in the party. He is strong because he represents the opposite of Blaine both in personal character and in public aims. We believe that his candidacy would give Mr. Cleveland and the Democratic party more trouble than that of any other man who can be named. We say frankly that we hope he may be nominated, not that we should expect to support him—we could hardly do so on the procrustean tariff platform that his party in Congress has made up—but because we desire to see both parties and all parties put the best foot foremost. In this way only do we see the path of true progress, advancement, and enlightenment for the republic.

While our hopes and best wishes go with the supporters of Judge Gresham, we do not see much prospect of his nomination. The Blaine men are still the strongest force in the Convention, and although their first choice is out of the field, their second choice will in all probability be the winner. That second choice may be Harrison, or Alger, or Allison, possibly Foraker, but will not be Gresham. It will not be Sherman, because Sherman stopped the Blaine movement last year in Ohio and furnished a rallying point for opposition, just as he stopped the third-term movement and furnished a rallying-point against it in 1880. Moreover, Mr. Sherman, when holding the reins of power, is not a man of complaisance. When he drives he follows his own way. He is no Garfield, to take another man on the box-seat and let him drive part of the time. The Blaine strength at Chicago will be given to the candidate whose immediate representatives will offer the best terms to the Blaine cohort of the past twelve years, and that candidate will be nominated unless the cohort shall look upon success at the polls as of more importance than continued control of the party organization. We do not anticipate any such display of the spirit of self-abnegation on their part.

THE "HORDE OF OFFICE-HOLDERS."

There was no point in Mr. Curtis's address on Tuesday week which was so loudly applauded by the great audience whom he both charmed and instructed, as his suggestion of a constitutional amendment lengthening the Presidential term, and making Presidents ineligible for reëlection. Of course, this is not a new suggestion. It has been often made before, and it is based on the same experience of human nature in politics to which we were indebted for Mr. Cleveland's emphatic condemnation of a second term in his letter of acceptance. It happens just now, however, to receive fresh point from the verification of his own views which Mr. Cleveland is unhappily furnishing to the country. What he said was:

> "When we consider the patronage of this great office, the allurements of power, the temptation to retain public places once gained, and, more than all, the availability a party finds in an incumbent whom a horde of office-holders, with a zeal born of benefits received and fostered by the hope of favors yet to come, stand ready to aid with money and political service, we recognize in the eligibility of the President for reëlection a most serious danger to that calm, deliberate, and intelligent action which must characterize a government of the people."

We are sure he must himself regret, even more poignantly than any of his supporters, that he should have so soon furnished that striking illustration of his own doctrine which the civil-service reformers lamented in their meeting on May 30. But when his argument is examined, it is found to be really an argument not against a second term, but against a particular mode of securing it. We doubt if there be anybody in the country, spoilsman or reformer, who questions the desirableness of being able to keep a good President eight years in office, if the interests of the country seem to require it. Nobody thinks eight years a dangerously long period for anybody to fill the highest executive place in this country, particularly if he have, when half-way through it, submitted himself afresh to the popular judgment. What everybody means, and what President Cleveland himself meant, when denouncing a second term, was that it was a bad thing to get a second term by using the Executive patronage to reward party workers and pack nominating conventions. If this practice could be abolished, second terms would really have no opponents. If it had been abolished four years ago, President Cleveland's reëlection to-day would, we think, be assured beyond any manner of doubt. What puts his reëlection in peril, if in peril it be, is simply the fact that he has allowed his superserviceable managers to use the public offices, which he said were public trusts, to purchase the support of the delegates to the nomi-

nating conventions. It is true that his predecessors did exactly the same thing; but then he preferred stronger guarantees than any of his predecessors that he would do nothing of the kind.

It is not surprising that, under these circumstances, the idea that we must have only one term, and make that six years, gains ground, and will probably continue to gain ground. Thousands are now convinced who were never convinced before, that the American man, as at present constructed, does not furnish virtue enough both for a second term and the control of the patronage. It has been said that we cannot tell what a banker's credit really is until we have seen him go through one financial panic, or what any man's morals are until we have seen him exposed to one first-class temptation. In fact, no man knows himself thoroughly until he has passed through this ordeal. The young Christian whom Tertullian tells of, thought a visit to the amphitheatre would be useful in deepening his horror of gladiatorial shows; but when he got there—"spectavit, exarsit, clamavit"—he was as eager to see, and got as excited and yelled as loudly as anybody. He was not so good a Christian when he came away as when he went in, but he was better acquainted with the secrets of his own nature. There is a good story of a colonel in the late war who was in command at an outpost, and suddenly deserted and did not turn up for several weeks. He then confessed, with shame, that the cotton speculators were getting so near the breaking strain on his virtue, by their offers of money for permits, that he felt he must run away in order to avoid the greater disgrace. So also, it is said that no pledges can bind a candidate for reëlection as long as he has the control of the offices, no matter how sincere he may be in making them, and that, as we cannot take away from him the control of the offices, we must wholly remove the temptation to prostitute them either for his own benefit or that of his party.

Is this really true? Must we alter the Constitution in order to protect Presidents against their own frailty? Perhaps so, but before making the change we should have to bear in mind the temptation to which every President would be subjected to help to keep his party in power, even when he himself was going out of power. Making him ineligible for reëlection would fortify him against appeals to his vanity or personal ambition, but not against the still more insidious appeals to his party fidelity, and to his sense of the value of his party to the country, and to his sense of the importance of the policy it was seeking to carry out.

In truth, the horde of office-seekers would probably, as they would say, "put in their best licks" by painting pictures of the ruin which would follow the expulsion from power of the party which had had penetration enough to single him out for the highest honor in the nation's gift. In short, prohibition of second terms would do something towards abating the great and, to our shame be it said, silly and childish abuses known under the general term of the spoils system, and accomplish, perhaps, by far the greater part of what is necessary to establish the reform, but the whole work can never be done without a change in our political usages. We must eradicate from the popular mind the idea that the public officers are the servants of the party and not of the nation, and that while it is theft to steal money from the Treasury and goods from a bonded warehouse, it is not theft to pay over national money to an idle, loafing political "worker" for trying to get you nominated for an office. One is really as dishonest as the other, but the public has not yet learned to look at the matter in this way. The work the civil-service reformers are doing in the press and on the platform is the education of popular opinion to look on all abstractions of public money from the Treasury for other than public purposes, whether it be paid out in salaries or stores, as essentially dishonest, as disgracing both the giver and the receiver, and as, therefore, something to be persistently watched and punished. That this change is being brought about, nobody can deny. The indignation of the Republicans to day over the "hypocrisy" of the Democrats, the injured air of the Democrats when anybody accuses them of office jobbing, the eagerness of all officials to show that they owe their places solely to their virtue and capacity, are signs, and very remarkable signs, of the growth of an immense popular conversion—but slow, because habits of mind cannot be changed any more readily than habits of body. This conversion, when it comes, may not make a constitutional remedy for the evil unnecessary, but without it no constitutional remedy can be thoroughly effective.

THE THIRD PARTY.

"The mission of the Prohibition party is to break down the Republican party," said a prominent Prohibitionist of Massachusetts a few days ago. Mr. St. John, the Prohibition candidate for President in 1884, said, in the presence of the Convention of his party which adjourned at Indianapolis on Thursday: "Cleveland will be elected in 1888. The Prohibition party will elect its candidates in 1892." Other members of the Convention put the same idea in another way: "We'll destroy the Republicans first, after that the Democrats." "Our mission is to destroy the saloon power in politics. A party must be built up strong enough to control the politics of the country against the saloons and the bars."

Here we get what is undoubtedly the real meaning of the assembling of a convention of 1,800 delegates, representing every State and Congressional district in the Union, and the nominating by it of a Presidential ticket which none of the delegates expects to see elected, but which all of them will support with great enthusiasm and unanimity. Stronger evidence of the faith that is in them could not be furnished than was given when the delegates, before leaving the Convention hall, raised among themselves a campaign fund of nearly $30,000. There is something remarkable in this spectacle of men giving so generously of their money to sustain a cause which has no hope of present success. Not a man of them has any chance of getting his money back again directly or indirectly by means of office, for nobody on the ticket will get an office. They give because they have faith in their cause, and they have faith in it because there is a moral purpose behind it. Nobody can deny the great public good which could be accomplished by destroying the "saloon-power in politics." Nobody can deny, either, that the surest way by which to turn the two great political parties against that power would be to build up a greater power.

Can the Prohibitionists build up such a one? So far as concerns the Republican party, the answer is plain. They have already built up a party strong enough greatly to lessen the chances of the Republicans for carrying all the so-called doubtful States. If they had not had a Presidential ticket in the field in 1884, the Republicans would, in all probability, have carried New York, New Jersey, and Connecticut, and elected their candidates. We say in all probability, for though it is a fact that the Prohibition vote in each of these States was much larger than the Democratic plurality, yet it is by no means certain that the vote cast for it would all have gone for Mr. Blaine if Mr. St. John had not been in the field. Thousands of votes were cast for St. John by Republicans who would never have voted for Blaine under any circumstances. In fact, the Prohibition party represented then, as it does now, the spirit of unrest in politics. The platform adopted at Indianapolis shows this very plainly. While it gives the first place to a demand for prohibition, it demands also that "import duties shall be so reduced that no surplus shall be accumulated in the Treasury, and that the burdens of taxation shall be removed from food, clothing, and other comforts and necessaries of life." It calls also for thorough reform of the civil service, for woman suffrage, for the abolition of polygamy, and the prohibition of Trusts. The declarations upon the tariff and against Trusts, coming from men who were nearly all former members of the Republican party, furnish one more sign of the dissatisfaction which is causing such steady disintegration in the Republican ranks.

There is every reason to believe that the third party of dissatisfaction and political unrest will poll a larger vote in November than it has ever polled before. The demoralized condition of the Republican party, and the general Bourbonism of the principles which it is daily being forced more hopelessly into adopting for its creed, will inevitably send thousands of recruits to the Prohibitionists. Instead of being afraid of the charge that they are ruining the Republican party, the Prohibition leaders are now jubilantly declaring this to be their main object. They would not have dared to do this four years ago, but the election of a Democratic President, with no ensuing damage to the country, has given them

courage. The figures of the last national election were very significant on this point. In every previous Presidential election the Prohibition vote had fallen far below what it had been in the off-year elections immediately preceding. Thus, in the State elections of 1871 the aggregate Prohibition vote in the whole country was 16,000, but in the Presidential election of 1872 it dropped to 5,600. In 1875 it had increased to over 42,000, yet in the Presidential election of 1876 it had dropped to 9,700. It recovered its strength partially in 1879, aggregating nearly 20,000, yet in 1880 it dropped to 9,600. After 1880 it mounted steadily and rapidly, reaching nearly 59,000 in 1883. In the Presidential election of 1884, for the first time in its history, it exceeded the vote of the preceding off-year election, going to nearly 151,000, which was the highest point it had ever touched. This is what Mr. Blaine's candidacy had done for the Prohibition party—it had made it impossible for the Republican managers to scare Prohibition voters back into the Republican camp by holding before them the horrors of Democratic rule.

Since 1884 the total Prohibition vote has nearly doubled, being in 1886 about 295,000. The party has never held a national convention at all approaching in numbers and enthusiasm the one of this year, and has never entered upon a campaign with such a determined spirit. It has funds, it cannot be scared, it is satisfied that the overthrow of the Republican party is a high and laudable mission, and neither threats nor ridicule will have any effect to turn it from its purpose. The Republican managers may well look upon it with dismay, but they should not pour out upon it imprecation and abuse. If they had not abandoned all principle, and given themselves up entirely to Blaineism, the Prohibition party would be scarcely more formidable now than it was in 1872, 1876, and 1880.

DESCRIPTIVE NAMES.

We have perceived with regret from time to time that our practice of giving to several public men the names by which they are best known to all their friends and acquaintances, and by which they are invariably spoken of in the circles which they adorn, is giving them more or less dissatisfaction. Our estimable friend "Tom" Platt, for instance, showed, in an interesting interview in the *Tribune* on Friday, that he is extremely dissatisfied because he is known and mentioned among Mugwumps by the name by which he is known and mentioned among Republicans, and intimates that this is one reason why he and other "genuine Republicans" always, when they find out what Mugwumps want, "decide to do the opposite." We cannot help thinking ourselves that this policy is hardly worthy of a statesman of "Tom" Platt's standing, for if followed persistently, it must certainly occasionally place him in positions of great perplexity. He is too much of a man to play pig to the Mugwump's Irishman—for he has doubtless heard of the Irishman who directed the course of an erratic pig by pulling it by the tail in the direction opposite to that which he wished it to follow. We are, of course, interested to a greater or less extent in "Tom's" movements, but we should never think of controlling them by any species of caudal traction. We like to see him follow the promptings of his own nature, and now that we know he will not be true to himself if we let him know what we should like, we promise to keep our wishes about "genuine Republicans" as private as possible.

But there is one point on which we cannot accommodate him. We cannot relinquish our practice of calling him "Tom." He can never be to us the "Honorable Thomas C. Platt," or even "Thomas Platt," first, because nobody who knows and loves him ever calls him anything but "Tom Platt"; and secondly, because these familiar names which we use in the *Nation* in speaking of various public men, are not only their real names, but they are descriptive terms—that is, they not only designate particular individuals, but they connote certain traits of character. In fact, among the politicians of whom we are in the habit of speaking as Mikes, Jakes, Tims, and Barneys, Michael, Jacob, Timothy, and Bernard are, it is true, the names given them by their unfortunate godfathers and godmothers in baptism, and under which they are indicted or bailed; but to their friends and associates they are titles of courtesy, such as are in England given to the sons of dukes, earls, and marquises, rather than names in the ordinary sense of the term. If any friend of "Tom" Platt, or "Barney" Biglin, or "Bill" Chandler were suddenly to call him Mr. Platt, Mr. Biglin, or Mr. Chandler, it would be at once inferred by the bystanders that a coolness of some kind had grown up between them, or that their relations had in some way undergone a serious change, or that, in short, to the friend, Mr. Platt or Mr. Chandler was not the same person as Tom Platt or Bill Chandler.

Our second reason is, however, the more important. That the familiar name of a prominent man, or indeed any kind of man—that is, the one by which he is generally known—contains, as we have said, a description of character, is one of the most familiar facts of daily life. No cold, or proud, or haughty, or serious, or reserved, or punctilious, or studious man was ever known as Tom, Dick, or Harry, Mike, Jake, or Barney. The bearers of these appellations always, or almost always, are in the category popularly known as "Hail-fellows, well met." They are the men whom you slap on the back, punch in the ribs, and around whose neck you put your arm, with whom you share a bed, from whom you borrow or to whom you lend trousers, shirts, collars, or pocket-handkerchiefs, whom you can hardly look at without wishing to "take a drink," to whom you can at any time lay bare a scheme of doubtful propriety in love, politics, or business, with the full assurance of tender sympathy, and whom you always convince in argument by "laying two to one" on the soundness of your contention.

We do not mean to say by any means that this is a description of all Toms, Dicks, and Harrys, Mikes, Jakes, and Barneys; but assuredly nobody who answers to it was ever known except as a Tom, Dick, or Harry, Mike, Jake, or Barney. Nor do we mean to say that all Toms or Dicks are really confiding, simple-minded, devil-may-care persons. On the contrary, they often conceal a considerable amount of guile under a very hearty, impetuous, and harebrained exterior, which has a very saddening effect on the social philosopher. Any one, for instance, who acted on the supposition that "Tom" Platt was a typical Tom, or "Bill" Chandler a typical Bill—that is, a rash, candid, impulsive, generous, nobody's-enemy-but-his-own sort of man—would be cruelly deceived. What we maintain is simply that there is a certain general external resemblance between all members of the class—an outward softness and good nature, and familiarity, an absence of airs, or "frills," or "dignity of tone," which puts the plain man at his ease, and makes him feel that he is in the presence of a real son of Adam, a creature familiar with all the minor weaknesses, at least, of our race, and far from too exacting in the matter of virtue or propriety.

This being our position, it may be imagined with what surprise, mingled with pain, we have from time to time observed expressions of irritation or disgust from the various members of the class over our habit of speaking of them in our columns by the names by which they are universally known—names which, if tested by the rule of Catholic orthodoxy—"quod semper, quod ubique, quod ab omnibus"—must be considered correctness itself. Under this rule, in fact, the use of such expressions as "Mr. Chandler," or "Honorable William E. Chandler," meaning thereby "Bill" Chandler of New Hampshire, would be a gross impropriety. To speak of our local Boys, Jake, Barney, Clint, Steve, Sol, and Johnny, by any other names would not be simply improper, but misleading. They are the only appellations by which they are known in the sphere in which they shine—politics. In their own homes they may possibly treat these appellations as what the French call "war names," and lay them aside in the recesses of their domesticity. But into these sacred precincts we do not follow them. To us they are simply statesmen actively engaged in making places for themselves in history. As husbands or fathers we know nothing of them. To us, as to the whole population of this great city, they are Boys, and must always be Boys, with all that the name implies.

COÖPERATION AND ITS PRACTICAL DIFFICULTIES.

It is a common belief that there is a large amount of wealth appropriated by capitalists and employers of labor without corresponding service to society; that it is the fault of the machinery of distribution which enables them to do so, and that, by proper alterations in this machinery, the workmen can obtain a large share of this surplus wealth, and add greatly to their comfort and well-

being. This idea is not confined to Socialists or radical labor leaders. It is held, more or less vaguely, by a large part of the community; and this fact gives strength and countenance to a great many schemes of reform which fail to meet expectation when brought to the test of practice.

Of all such schemes, the most promising has been that which is known under the somewhat indefinite name of coöperation. It is a plan which has undeniable merits. It tends to reduce the antagonism of classes, to educate the workman in habits of forethought, and to give him self-respect and independence. Men like John Stuart Mill have looked forward to its application with the highest hopes. It is of great interest to compare these expectations with the actual result. This we are now able to do. The Johns Hopkins University, as our readers are aware, has recently published a series of studies on coöperation in different parts of the United States, by men like E. W. Bemis, Albert Shaw, and C. H. Shinn, which are now collected into a single volume. As a contribution to industrial history, this book is of the very highest value. It gives us a sufficiently broad basis of fact to judge of the conditions under which coöperation will succeed or fail.

What is coöperation? Holyoake has defined it as "an industrial scheme for delivering the public from the conspiracy of capitalists, traders, or manufacturers, who would make the laborer work for the least and the consumer pay the most for whatever he needs of money, machines, or merchandise." This definition, it will be observed, assumes that the capitalists have "conspired" to accumulate unjust profits, and is intended to cover almost any scheme for redistributing them. Practically, the name is applied to three distinct things:

(1.) An arrangement by which the consumers manage the business and divide the profits—distributive coöperation.

(2.) An arrangement by which the employees choose those who are to manage the business—productive coöperation.

(3.) An arrangement by which the employees participate in the profits of the business—profit-sharing.

The conditions which decide the success or failure of an experiment in distributive cooperation are comparatively simple. Such an enterprise has the advantage of being fairly sure of its custom; it can therefore dispense with wasteful advertising and still more wasteful credit. If managed with the same ability as an old-fashioned store, these things should give it an advantage. In England the conditions were such as to give that advantage. Old trade methods were so bad that coöperative stores were able to sell cheaper. In America such instances of success were exceptions. The 500 councils of the Sovereigns of Industry, established a dozen years ago, have left but few survivals. The Patrons of Husbandry have fared better; but even here the percentage of failure was very great. It is the same story everywhere: the men to whom the funds were intrusted were found wanting in the necessary ability or character.

The cases of productive coöperation and of profit-sharing are more complicated. It may readily happen that the feeling of independence in the one case, or of personal interest in the other, is an actual source of added efficiency. This is the testimony of some who have tried it. Anything which thus increases the efficiency of the work, especially if it tends to prevent strikes, is a powerful source of advantage to all parties concerned. Unfortunately, the experience of the Brewsters in 1872 showed that the system of profit-sharing did not prevent strikes. There are few instances of good results to offset this signal failure. Only one case—that of the Pillsbury Mills at Minneapolis—can be described as a distinct and continuous success. Most manufacturers have found that loyalty and efficiency on the part of their hands can better be secured by personal consideration, steadiness of employment, or promotion, than by a half-understood system of supplementary dividends. The more complicated an industry is, the more fully does the truth of this statement appear.

But what of productive coöperation on the part of the hands themselves, where they choose their own managers, with or without a system of profit-sharing? This has been more frequently tried, with some marked instances of success, particularly among the shoemakers of Massachusetts and the coopers of Minneapolis. It is subject to two dangers. It is a question whether the operatives will choose as good a manager as the stockholders of a corporation; and it is also a question whether he can enforce as good discipline among those on whom he depends for his place. The first point is the more serious of the two. It is often hard for workmen to realize the value of the services of a responsible and efficient manager. They are not willing to pay for them; and this false economy too often wastes many times the money which it saves. The industries which lend themselves to productive coöperation are those of comparatively simple character, where the connection between the efficiency of the labor and its results is most obvious, and where the necessities for organizing power and speculative foresight are reduced to a minimum. But the importance of such industries is growing every day relatively less.

We have thus far considered coöperation solely from the standpoint of efficiency and economy as a matter of business. There are certain other things to be taken into account, especially its work as an educator. As far as it teaches workmen about the responsibilities and use of property, it has a most powerful influence for good upon them and upon the community. As far as it leads them to become possessors of property, the result is still more noticeable. The success of the building associations and coöperative banks has been largely due to this fact. But this very success is fatal to the pretensions of those who advocate the coöperative principle for its own sake. It is not by altering the machinery of distribution that it succeeds, so much as by educating men to take advantage of the existing machinery.

There are three forms of coöperation in which the percentage of success has been large—building associations, creameries, and mutual-insurance companies. The first leads its members to become property-owners; the second and third are directed by men who already own property. The success in these cases, so far from proving that the direction of industry should be taken out of the hands of capital, proves that the owners of capital are competent to direct it. Success here, contrasted with the percentage of failure elsewhere, shows the large importance of having responsible men in control, and the relatively small importance of any particular form of machinery of distribution. It is not new methods of distribution that we want, but education in the best and most efficient use of our powers. It is not as a machine, but as an educational force, that coöperation seems to promise success—not because it will enable leaders of labor to become leaders of industry, but because, as soon as those leaders are tried in the latter capacity, they are subjected to a test which only the fittest can survive.

SCHOLARSHIPS OPEN TO WOMEN AND GIRLS IN ENGLAND.

THE growth of the modern English system of scholarships in aid of the higher education of girls dates from 1853, in which year Queen's College, London, was incorporated by royal charter, and the body of professors, out of their private means, founded eight "perpetual" scholarships. About the same date senior scholarships for girls were provided out of the Reid Trust, created by Mrs. Reid, founder of Bedford College, London. As years went on, further pecuniary assistance was given to the higher education of girls; but it is only during the last eighteen years, *i. e.*, since women have obtained a participation in the advantages of university education, that the great development of the system of scholarships has taken place. There are now not only a large number of scholarships designed for women, but also many for which women may compete on equal terms with men. With respect to each kind our readers will want to know something as to annual value, period of tenure, the colleges at which and the conditions under which they may be held; and, in the case of scholarships derived from endowments, what means have been adopted by the founders to secure the ends desired. Estimating a scholarship of £50 per annum tenable for three years as being worth £150 in the year in which it is awarded—and excluding from our consideration the numerous scholarships for the encouragement of music and the fine arts—we find that in different ways a total of £6,500 is given annually in England in scholarships and exhibitions for women and senior girls. Of this about a third is interest derived from endowments; actually a fourth of the whole is drawn from the surplus revenues of Girton and Newnham Colleges, in scholarships tenable at these colleges; a fifth is given annually by the London City Companies, and the rest is due to the liberality of individuals able to subscribe towards scholarships to run a certain number of years.

Girton College, Cambridge, though it has only three perpetual scholarships, is by far the richest college as regards the value of scholarships, as much as £2,000 being given annually

on the results of its entrance examinations alone, and about £450 more in connection with local university examinations. All scholarships to Girton College are tenable for three years, the length of the college course. Newnham College ranks next, and accounts for £1,500 a year. Mrs. Sidgwick writes: "Our scholarships are rather variable in total amount, and in the way they are awarded, and in the length of time they are held; sometimes scholarships being gained by students in the middle of their course, sometimes small ones superseded by larger ones, etc." It is a notable difference that while at Newnham a great deal of pecuniary help is given in the way of small exhibitions to students who are already in residence, and whom it is thought specially important to assist, with the Girton authorities it is a principle that whatever is to be done in aid of a student shall be fixed at the time she enters on residence, in order that her mind may not be disturbed during her course by uncertainty on this head.

Most of the scholarships in the gift of the Newnham Council, whether derived from foundations or given by the London City Companies or by Newnham College itself, are awarded on the results of the Cambridge Higher Local Examination; the performance, if any, in the preceding year being taken into account. The halls at Oxford give their scholarships in connection with their respective entrance examinations—Somerville Hall about £400 annually, and Lady Margaret's Hall £200; these halls have as yet no foundation scholarships. The old non-residential institutions, Queen's College and Bedford College, London, award in scholarships £330 and £460 per annum respectively. The average value of the scholarships being less than in the case of residential colleges, a proportionally greater number of scholarships can be given with the same annual expenditure. These two colleges are the richest of all in "perpetual" scholarships, Queen's College heading the list with eleven. Scholarships to the value of £270 are attainable by pupils of the North London Collegiate School for Girls, this sum including the "leaving" scholarship given by the Clothworkers' Company, and the Platt scholarships, tenable either in the school or at any college approved by the Governors.

Then there are the Gilchrist scholarships, those with which we are here concerned having a total annual value of £415: one of these may be held either at Girton or Newnham; the others are tenable at any "collegiate institution approved by the Gilchrist trustees." There are also the Harkniss scholarship for the encouragement of geology, and scholarships at South Kensington to promote the pursuit of natural science. The Catherine Winkworth scholarships at University College, Bristol, are noteworthy as the only examples of scholarships for women only which are in the gift of the council of a mixed college. The newly founded St. Dunstan's Exhibitions of £100 a year for three years are derived from an ancient trust; three are to be given annually to girls under nineteen, and resident within the metropolitan area. These exhibitions are for the purpose of enabling the holders to fit themselves for any profession, and are tenable at any place of higher education approved by the Governors.

As to the scholarships for which women may compete on equal terms with men, they are tenable at the following colleges:

At University College, London	£700 per annum
At the Colleges of the City and Guilds of London Institute	620 per annum
At Yorkshire College, Leeds	450 per annum
At Owens College, Manchester	270 per annum
At University College, Liverpool	£270 per annum
At University College, Bristol	240 per annum
At Mason College, Birmingham	170 per annum
At University College, Nottingham	14 per annum

—in all, over £2,700 per annum in scholarships for one and two years. The above-mentioned provincial colleges mostly give young men and women equal chances.

With respect to the conditions imposed on the holders of scholarships, great variety prevails, but the points most commonly taken into consideration are: (1) Need of assistance, (2) proficiency, and (3) course of study intended.

(1.) In many cases exhibitions are only awarded to those who are unable to defray the cost of higher education. The Girton Council, however, prefers the plan (which experience proves to be judicious) of advertising as the value of a scholarship a less sum than is really available, together with a notice that the scholarship will be augmented in the case of a successful candidate who could not otherwise afford to accept it.

(2.) A common stipulation is, that a scholarship will not be awarded unless due proficiency is shown; in the advertisement of the St. Dunstan scholarships it is stated that the award may be determined either by aggregate merit or by special proficiency in given subjects. In the case of some scholarships there is a provision that if there are candidates of almost equal merit, the scholarship may be divided between them.

(3.) A common condition is, that the holder of a scholarship shall read for honors (subject sometimes specified), and in addition to this the Gilchrist trustees require, before the payment of each instalment of the scholarship, a certificate of the diligence and satisfactory conduct of the scholar. The St. Dunstan Governors require of a candidate recommended for an exhibition a definite statement of the course of study she desires to pursue in preparation for the profession which she selects. The Council of Newnham College stands alone in requiring to be satisfied, before awarding a scholarship, that the candidate's state of health is not such as to prevent her from profiting by a systematic course of study.

Founders of "perpetual" scholarships have adopted some one of the three following methods to secure their ends: (*a*) To establish a trust fund for scholarships to be administered by a body of trustees independent of any college; such trusts are the Gilchrist Trust, the Reid Trust. (*b*) To establish a trust for scholarships tenable at a certain college to be administered by the authorities of that college as trustees. (c) To pay the principal into the general fund of some selected college, in order that the college authorities may establish in perpetuity a scholarship under given conditions. The last of these plans is generally chosen when it is desired to help a young institution which perhaps wants money for building; also, in making small foundations, it saves the creation of special machinery. This latter advantage can be claimed for the second plan, whereas the first is that best calculated to promote education in general, since the trustees can at their discretion make any scholarship tenable at a particular college, or leave the scholar free to choose any genuine place of higher education, and can, when required, vary the conditions under which any scholarship is held.

With respect to the class of women and girls availing themselves of scholarships, it is mostly those who would without scholarships be unable to afford the cost of higher education; most come from the professional class, some from that of upper tradesmen; almost all who take scholarships look forward to earning their own living. To the best of our knowledge, no case has occurred in the women's colleges in which a wealthy student has won and accepted a scholarship. Certainly wealthy students are comparatively rare among women, but it is also noticeable that there is, up to the present time, a better tone among women than among men undergraduates in the older universities with respect to scholarships: the women do not look upon a scholarship in the light of a prize won, or a reward for something already accomplished, but regard it as a means to help them to still higher work—trust money that they are bound in honor to turn to good account.

An account of the scholarship system in England would not be complete without mention of the strong opinion entertained by one of the leaders in the cause of women's education, Miss Beale of the Ladies' College, Cheltenham, as to the danger incurred in founding scholarships tenable at particular colleges. Miss Beale accuses schools and colleges, in many cases, of "seeking to establish a reputation by securing exceptional talent," or by appropriating the honor of the training given by the labors of others. Miss Beale speaks of such scholarships as "neither more nor less than bribes to parents to consider *not* what is intrinsically the best place of education, but to send their boys or girls to special places," and has herself consistently refused offers of foundation scholarships in connection with her college. The attachment of scholarships for boys to particular colleges has notoriously produced the evils Miss Beale deplores, and when we read in the report of an educational institution for women a plea for the gift of scholarships on the ground that "these are needed to bring students of ability, as well as those who cannot come without assistance," we are impressed with the importance of Miss Beale's warning. That scholarships are urgently required in aid of those who without such help could not afford the cost of higher education is a fact that calls for recognition; and it might be Quixotic to expect of colleges giving scholarships out of their surplus revenues that they should make these tenable at any college for higher education of acknowledged merit. Surely, however, individual founders of scholarships might, in general, adopt the third mode of foundation described, and thus realize to the best of their ability the earnest hope expressed by Miss Beale, that those who want to do real good with their money will give it to enable the recipients to obtain the best education *wherever* it is to be found.

PARLIAMENTARY GOVERNMENT AND GOVERNMENT BY PARLIAMENT.—I.

LONDON, May 25.

"WE are no longer quarrelling about the character or about the conduct of men, or the tenor of measures; but we are grown out of humor with the English Constitution itself." These words formed part of a speech on Parliamentary reform long before the French Revolution; they were adopted just sixty years ago by Macaulay as a text on which to deliver a homily about the changed feeling with which the generation who carried the great Reform Bill regarded the unreformed Parliament. The words of the Whig statesman and the comment of the Whig reviewer possessed in 1828 a real significance; they signified that the optimistic belief in the perfection of English institutions which is permanently recorded in the pages of Blackstone, had passed away; that the Consti-

tution was no longer above criticism; that there were innovators daring enough to believe that the House of Commons itself needed reform. Language which had a real meaning to the men of 1828 has a real meaning for the men of 1888, but its significance has, oddly enough, been altered by the lapse of time. Burke, Hallam, and Macaulay all recognize a change in the opinion of mankind. But readers who to-day study the words and note the tone of these writers are surprised to find how small was the change which to our fathers seemed so important. The English Constitution had become the subject of criticism, but the critics themselves, the Radicals and innovators—the Democrats, as they often called themselves—of 1828 did not let their criticism go beyond demand for reform. They differed as to the degree in which the popular element in the House of Commons should be strengthened. No one of them doubted that, to increase the power of the representative chamber, to give greater weight to the people, to "make Parliamentary government more Parliamentary" (if such a phrase might be allowed), would insure to England a perfect constitution. Still less did any Whig or Radical doubt that to extend English constitutionalism throughout the civilized world was equivalent to extending the blessings of civilization and justice. Even the Chartists, the men outside the respectable world of politics, when, forty years ago, they attempted, feebly enough, something like revolution, did not demand and probably did not desire democratic changes much beyond reforms which have been carried without disturbing the wealth and the conservatism of England.

Parliament has been made democratic. Parliamentary government of one kind or another, modelled mainly on the British type, has been established throughout the civilized States of Europe, and now the fact is gradually becoming visible to any thoughtful observer of current events and of the flow of opinion, that, in one country after another, doubts are entertained as to the merits of that very Parliamentary government which it has been the pride of Englishmen to create, and the object of Continental Liberals to imitate. The combined strength and weakness of French genius have made France for a long time the representative of the sentiment prevalent at crises of European history: the importance of the French Revolution is, that France gave violent, exaggerated, ill-judged expression to emotions and beliefs which found an echo in every civilized land. It is noticeable, therefore, that in France the Democracy begins to doubt the virtues of Parliamentary rule. Boulanger and Boulangism may, likely enough, pass away like the last fashion in dress. But if Gen. Boulanger is a mere charlatan (which is not quite certain), the essence of a charlatan is his skill in appealing to the sympathies of his audience; and the very consideration that the would-be dictator aims at catching the wind of popular favor, makes it probable that his words and acts show us which way the wind blows to-day and the gale may blow to-morrow. The one thing in which Boulanger is consistent is in systematic attack on the authority of the Assembly. He revives or carries on the Imperial hatred of Parliamentarianism, and in taking this course he appeals to the strength of the Empire. No sensible man doubts that thousands of Frenchmen who disliked the Napoleonic despotism were glad that the Prince-President put an end to the conflicts and the existence of the Assembly. They wished, probably, to have a representative body which should check the excesses of the Government. But they certainly did not wish that Parliament should govern.

French caprice, it may be said, hardly deserves to be noticed, save as a mark of the inherent mutability of French character. The sentiment, however, which is at this moment exciting the anxiety of every bona-fide Republican in France prevails under different names in countries not swayed by French sympathies. Neither Prince Bismarck, nor the Emperor, nor the German people show any ardent belief in government by Parliament as it exists in England. Bismarck's career is, in this as in other points of view, most noteworthy. He never, even at the height of his feud with the Prussian Assembly, either attempted or, it is fair to suppose, contemplated a *coup d'état* which should make the Crown despotic. For Prussia, as for Germany, he acknowledged that representative institutions were necessary, though the necessity was an unpleasant one. On the other hand, he was determined that if Parliament existed, Parliament should not be supreme. To draw a distinction to which I shall again recur, he acquiesced in "Parliamentary government," *i. e.*, in a constitution under which the voice of a representative legislature should be heard and listened to; he opposed "government by Parliament," *i. e.*, the creation of a constitution under which the representative assembly should be the supreme body in the State. How far Bismarck's ideas will survive him, how far it is possible that an elected assembly should legislate and not govern, are questions on which it is unnecessary, for my present purpose, either to form or to give an opinion. What I note is the existence, not the soundness, of Bismarckian ideas. I emphasize the fact that Bismarck and Boulanger, who probably agree on no other matter whatever, are at one in deprecating government by an elected assembly.

The perfect success of Swiss statesmanship has produced one bad result: it has diverted public attention from the instructive lessons to be gathered from Swiss politics. Yet a cursory observation of the institutions which exist and the sentiments which prevail throughout the Confederation, shows that Democrats who value freedom and good government need not necessarily rate high the authority of Parliament. The Constitution of the Federal Executive and the spreading influence of the Referendum (which is in Switzerland an institution of national growth) are checks placed upon the power of the Assembly. They are checks which prevent the growth of that form of government by Parliament which exists in England; and no one can take up the works of Swiss writers without perceiving that there are democratic thinkers and sincere Republicans who look upon Parliamentarianism with as little favor as a Boulangist or a Prussian official. It were ridiculous for me to address readers of the *Nation* on American politics, but while the position of the President and his Cabinet is absolutely inconsistent with the existence of a constitution really resembling that of modern England, an outsider may draw from the constitutions of different States throughout the Union the inference (though probably, like most conclusions drawn by an outsider, it is erroneous) that popular confidence in representative assemblies is not on the increase. In England, it is true, no one as yet denounces Parliamentarianism. The term is unknown. Yet there are signs that the old absolute confidence in Parliamentary government is gone, and that a condition of things might easily arise under which Democrats would wish to curb the authority of the House of Commons.

What are the causes or the justification of this declining confidence in Parliamentary constitutionalism, and how far they are likely to be permanent, I may consider in another letter. Meanwhile, one fact deserves attention: the blessings which the English Constitution did in the last century really confer upon England, or which England at any rate enjoyed under her Parliamentary institutions, have been obtained by all nations who have been able bona fide to adopt representative government. Under the unreformed Parliament, England enjoyed three blessings which made her the envy of Continental nations. The policy of the state, both at home and abroad, was, not immediately or directly, but yet in the long run and by indirect means, determined by the will of the nation, or at any rate by the will of the only part of the people who felt a keen interest in politics. Mistakes enough were made, both in domestic and in foreign affairs, but the mistakes were the mistakes of the British people. The war with the American colonies, the opposition to Catholic emancipation, the foreign policy of Chatham, and the foreign policy of his son, met with the approval of the country. Arbitrary power, as it existed in France, Germany, or Italy, was unknown; if the law was severe or impolitic, every man was ruled by law and not by despotic caprice. As great freedom of discussion was allowed as any large body of men either demanded or desired. Obedience by the Government to the will of the nation; enjoyment of personal liberty under the protection of the law; as perfect freedom of discussion as the best sentiment of the age allowed—these were the benefits which the English Constitution conferred upon Englishmen, and these are precisely the blessings enjoyed by the citizens of every European state which has obtained Parliamentary government. In France, in Germany, in Italy, or in Switzerland, the ultimate sovereignty of the people may or may not be acknowledged in words, but it exists in reality. In none of these countries can the most powerful ruler perform acts of arbitrary tyranny which, not much more than a century ago, were allowable to the feeblest of Italian dukes or German princes. Throughout every civilized Continental state, a freedom of discussion exists which the most liberal thinkers among George III.'s statesmen might have thought excessive. Representative institutions have produced all the good results which the enthusiasm of Burke and the criticism of Montesquieu ascribed to the English Constitution.

AN OBSERVER.

THE MARQUIS DE TESSÉ.

PARIS, May 18, 1888.

THE Comte de Rambuteau has just published the letters of the Maréchal de Tessé to the Duchess of Burgundy, to the Princesse des Ursins, to Mme. de Maintenon, and to others. These names sufficiently draw attention to his publication. The name of the Marshal de Tessé himself has fallen into comparative obscurity, somewhat unjustly; but history cannot digest everything, and, after two centuries, very few names remain in the light, like the snow-peaks which are still colored by the setting sun when all the inferior peaks and the valleys are lost in darkness.

M. de Rambuteau boldly asks Saint-Simon to present his hero to the public, though Saint-Simon paints his portraits with dark colors:

"M. Tessé," says Saint-Simon, "was a Manceau [an inhabitant of Le Mans is so called] worthy of his country, shrewd, clever, marvellously ungrateful, hypocritical, and scheming, as was strongly exemplified in the case of Catinat, to whom he owed his fortune, and on the ruin of whom he afterwards rose. He had

the jargon of the ladies, and a little the jargon of the courtier, quite the air of the seigneur and of the great world, without, however, spending much. Really ignorant of war, as he had never taken part in one, he found himself by chance everywhere, near every action and every siege. With an air of modesty, he was bold in making himself valued and in insinuating what was useful to him; always on good terms with whoever had credit with the ministers, especially with the powerful valets. His sweetness and politeness made people love him; his commonplaceness and shallowness (for you soon saw to the bottom of him) made him despised. Sometimes an amusing talker, anon flat and tiresome, always full of views and of calculations, he gained advantage by his baseness with Marshals Villeroi, Vendôme, Vaudemont, and by his suppleness with Chamillard, Torcy, Pontchartrain, Desmarets, and especially with Mme. de Maintenon, to whom he was introduced by Chamillard, on one side, by the Duchess of Burgundy on the other. He took a marvellous advantage of the marriage of this Princess, which he had concluded, and of the intimacy which the tenderness of the King and of Mme. de Maintenon had procured him with her; the Duchess prided herself on loving and on serving Tessé, as having been the instrument of her own happiness."

This is a cruel picture. "Will you," says M. de Rambuteau, "shut my book on it? You would be wrong; say to yourself rather that if Tessé found his *bâton de maréchal* in his inkstand rather than in his *giberne*, there must be something in his letters. Taste them. If I am not mistaken, you will go to the end." M. de Rambuteau had found letters of Tessé in all our public archives and in some private archives; he also was able to see the copy of all the Marshal's letters, in eleven volumes, which is in the possession of M. de Barthélemy.

Tessé was the son of René de Froulai, Count of Tessé, and of Madeleine de Beaumanoir. He was born at Le Mans in 1648; in 1669 we find him in the army, as aide-de-camp of Marshal Créqui. In 1678 he was at the battle of Rheinfelden, and he gives an account of it to Louvois, his protector. In 1685 he accompanied the dragoons in the expeditions which followed the revocation of the Edict of Nantes; his sentiments are seen in this letter written to Louvois from Orange: "The city is converted, the principality has taken the same resolution, and the gentlemen of the Parlement, who wished to distinguish themselves by a little more obstinacy, followed suit twenty-four hours afterwards. All this took place quietly, without any violence or disorder. Only the minister Chambrun, the patriarch of the country, continues to be deaf to reason; as for the President, who aspired to the honors of martyrdom, he, as well as the rest of the Parlement, would have become Mohammedan if I had wished it." In 1688 he was employed, under the orders of Montclar and Duras, in the devastation of the Palatinate. M. Rousset, in his 'History of Louvois,' cites these lines of Tessé's written to Louvois from Heidelberg:

"I did not think that it would cost a man so much to undertake himself the burning of a city peopled like Orleans. You may be sure that nothing remains of the beautiful castle of Heidelberg. . . . Thank God! nothing tempted me; I only put aside the family portraits of the Palatine house, namely, the fathers, mothers, grandmothers, and relatives of Madame [the daughter of the late Elector], with the intention, if you order me or advise me to do so, to present them to her, after she has somewhat recovered from the devastation of her native country."

In 1693 Marshal Catinat wished to enter into negotiations with the Duke of Savoy. He sent Tessé in disguise to Turin, where he conferred for several days with Victor-Amadeus II. and his Minister, the Marquis of St. Thomas. They prepared together a treaty which yielded the country of Nice to the Duke, ended a war which was ruinous for him, and assured the marriage of the Duke's daughter with the Duke of Burgundy. This was a great triumph for Victor-Amadeus; it was also a great victory for Tessé, who had revealed himself an excellent diplomat. Louis XIV. was satisfied, and Tessé received the felicitations of all the Court. He remained at the French Court the confidential friend of the charming young Princess of Savoy, a mere child when she arrived in France, but very agreeable, very clever and intelligent. It is well known that the Duchess of Burgundy entirely won the favor of Louis XIV., as well as of Mme. de Maintenon; she was treated by them like a spoiled child, and her natural gayety proved very enlivening to the King, who had reached an age which made him, to use the words of Mme. de Maintenon, "peu amusable."

In 1703 Tessé was appointed Marshal of France under circumstances which are thus related by the Abbé de Choisy:

"The King was working at Mme. de Maintenon's with M. de Chamillart, and was making a list of the marshals of France who were to be declared the next day. The Duchess of Burgundy, looking over the King's shoulder, saw that Tessé was not on the list. She had been jumping and dancing and laughing as usual, when she suddenly began to cry. The King wished to know the reason of it. 'Oh, sire, you dishonor the man to whom I owe the honor of belonging to you, who has made me what I am!' The King seemed vexed that his secret should have been discovered, and in his anger he tore up his list. The marshals were only appointed a year afterwards; instead of four there were ten, so that Tessé should have a place."

The letters of Tessé to the Duchess of Burgundy, which are now published, were written between the years 1701 and 1711. During that period Tessé had first returned to Italy, and had renewed a treaty of alliance with Victor-Amadeus. He had foreseen that this ally could not be much trusted. "He will never be an easy ally, and his fidelity will always be doubtful, whatever precautions we may take with him." Tessé went afterwards to Venice, on a diplomatic mission; and, having accomplished it, he took his part in the operations of the war of succession under Catinat. He protected the States of the Duke of Mantua, who was our ally, and spent the winter of 1707 in Mantua, which was blockaded by the imperial troops. We find him in 1704 in Spain, where he took the command of the French army. On his way he stopped, with the permission of the King, at Toulouse, where he saw the Princesse des Ursins, who had been dismissed from the Spanish Court; he never ceased afterwards to work for her return to Spain.

I confess to having been disappointed in the letters of Tessé to the Duchess of Burgundy. I should say that they were written for a child, if they were not sometimes almost grossly indecent. They were not worth publishing, even if they sometimes amused the person for whom they were written. They are all very much in this style: "I shall tell you nothing of our war; the armies are always in the same situation, and, for want of a better occupation, we amuse ourselves by assassinating each other and firing at each other. These military amusements are not worth seeing or talking about, and I have only the honor to write to you to make you remember your ancient servitor," etc. He never gives any details on political or military questions, and in this he showed much discretion; but his letters to the Duchess, full of insignificant details on dress, ladies-in-waiting, the fashions of foreign courts, seem to us really insipid. The Duchess of Burgundy may have been interested to learn that her friend, "Mlle. de Salle, who has lost that name to take the name of Comtesse de Grésy, has not grown handsomer; her waist is still the same, but her nose has grown bigger"—but we do not much care about this sort of information. Some of the letters are like pages of a guide-book: "The richest women in Geneva are dressed like simple *bourgeoises;* all the bourgeois wear a sword," etc.

The diplomatic despatches of Marshal Tessé are in a very different style. Though he is no Saint-Simon, he can paint a character. His portrait of Victor-Amadeus, the father of the Duchess of Burgundy, is truly excellent; so is his portrait of Philip V., which he made for Louis XIV. himself:

"The King, your grandson, is an almost incomprehensible prince; your Court, and perhaps your Majesty yourself, do not render him the justice which he deserves for his intelligence and his good sense. I dare to say that he has a great deal of it—more than people believe, and more than he believes himself. Too much natural backwardness, a slowness, if not laziness of speech, too scrupulous a belief that the smallest mistake of a king is a crime, by making it difficult for him to will and to decide, spoils what good there is in this first impulse."

Tessé found in Spain difficulties of every kind; he constantly had to complain of the King's Council, the *Despacho;* he complained of the King, who had no wish but to please the Queen. His first military operation was the siege of Gibraltar; the enterprise had soon to be abandoned. In 1706 he received from Louis XIV. orders to besiege Barcelona, where the Archduke had shut himself up. He pushed on the siege with some vigor, when Lord Peterborough arrived with a fleet and dispersed the squadron of the Comte de Toulouse. The siege had to be raised.

The year after, Tessé was sent to Savoy. The Duke had declared against France and the French frontier was threatened. Tessé does not seem to have shown much vigor in his campaign, and he lost Susa, an important place, one of the keys of the Alps. This was a great blow to Louis XIV., who never afterwards confided any military operation to the unfortunate Marshal. Tessé was still employed in some diplomatic missions. He returned to Spain when Philip V. abdicated in favor of his son. He gives a very good account in his despatches of the extraordinary state of the Spanish Court under the short reign of Louis I. When the young King died of the small-pox, Philip V. was obliged to assume power again, and the Marshal, who was himself much broken by age, obtained permission to retire from the service. He received the Golden Fleece on his departure, and, a few months after his return to France, he died May 30, 1725, in a little house which he had hired of the Camaldules.

Correspondence.

DR. VON HOLST AND HIS CRITIC.

To the Editor of The Nation:

Sir: In the *Nation* of March 15, "N. Z." is confident of having found in an article published by me in Sybel's *Historische Zeitschrift* a good example for proving the old thesis, "How difficult it is for any foreigner to understand perfectly the institutions under which we live." To refute "N. Z.'s" criticisms I should have to ask the *Nation* to publish a translation of my whole article. This not being possible, I beg to state to "N. Z." through your columns, with all due respect, that in this case at least I have not failed to understand your institutions, but he has entirely failed to understand my article. I am bold enough to hope that no intelligent

American who has read my former writings will think it possible that I am really groping in such midnight darkness as I am made to do by "N. Z.," and that, too, in fundamental questions. At all events, I am not humble enough to receive any enlightenment from "N. Z.," as long as he proves himself unable to distinguish between a *fact* and the *theory of the law*, as he has done with regard to the President's share in the legislative power.

If he carefully reads once more the reasons I give for believing that the Senate will never be shorn of its power as the House of Lords has been, he may yet learn from the foreigner why "the fate which has overtaken the Electoral College" cannot teach us anything whatever as to this question. The statement that, in my opinion, "Senators rather than members of the lower house are regarded by the masses of the people as their genuine representatives," is so far from giving a correct view of what I really have said, that I should be forced to consider it a wilful misrepresentation, if the whole letter did not show, as I stated before, that "N. Z." has been absolutely unable to understand my article. If, as I am willing to assume, a defective knowledge of German is the reason of that, he might have been more charitable in judging my failing to correctly understand an idiomatic English expression. That is the only point as to which I probably must acknowledge his criticism to be justified, although I am still at a loss to understand the "idle spectator of ground and lofty tumbling," and born Americans whom I have consulted are in the same plight. Besides, this mistake has nothing whatever to do with the correctness or incorrectness of the opinions I have expressed on the questions of constitutional law treated in the above-mentioned article.

Very respectfully, H. von Holst.

Freiburg im B., May 21, 1888.

[We fear that "N. Z." cannot take cover under his ignorance of the German; but we are surprised that any "born American" of intelligence should be unable to explain the phrase from the mountebank's programme of "ground and lofty tumbling"—that is, acrobatic feats on terra firma and in the air.—Ed. Nation.]

BLACKWELL'S GERMAN PREFIXES.

To the Editor of The Nation:

Sir: In your criticism of my little work on 'German Prefixes and Suffixes,' lately published by Henry Holt & Co., you bestow upon it a moderate commendation, coupled with the charge that I have literally translated "page after page" from Sanders's 'Wörterbuch der deutschen Synonymen.' I submit that this is an unfair and altogether misleading statement of the facts, and in making such a statement you do me a great wrong. That I have largely drawn upon Sanders's work is true, but I have faithfully acknowledged it in my preface. But for Sanders's 'Synonymen,' his large dictionary of the language, and his 'Neue Beiträge,' as well as for Heyse's and Meyer's labors, I should probably not have attempted my own work; yet I have given so much individual thought and labor to analyzing, qualifying, amplifying, and improving, wherever possible, every definition, and illustrating by new examples every principle, that I think it fair to claim the credit of having succeeded in presenting this difficult and entangled subject in a logical order and in an easily comprehensible manner—a thing which neither Sanders nor any other man has ever done before. The purpose of my book is to clear away the rubbish, and to leave the subject of German prefixes and suffixes in a clean and definite shape. Every teacher and every student of German has felt the need of such a work as I have attempted to supply, and as such a work is found nowhere else in the world easily accessible to English-speaking persons, I am unable to see how I can be subject to censure in this matter.

Respectfully, J. S. Blackwell.

Columbia, Mo., May 26, 1888.

[We must still insist that we were within the bounds of literal and exact truth in saying of Prof. Blackwell's 'Manual' "that page after page of matter—statements, qualifications, illustrations, and all—is simply translated, with more or less of rearrangement, from Sanders's 'Wörterbuch der deutschen Synonymen.'" This is true, for example, of pages 4, 5, 6, 7, 8, and 9, which make no mention of Sanders, but are, nevertheless, *taken bodily, sentence for sentence*, from his 'Wörterbuch,' pages 3-8. Our comment was, that one is not adequately prepared for that sort of thing by what he finds in the preface, in which Prof. Blackwell merely names a list of authorities from whom he has "borrowed help." In this list, to be sure, we find Sanders's 'Wörterbuch.' But does Prof. Blackwell really regard this as an entirely ingenuous account of his *modus operandi?* If so, what would be the nature of the case for which he would reserve the word *compile?*—Ed. Nation.]

CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: In your editorial of May 31 is a clause which I venture to quote as expressing exactly the theory of Cabinet responsibility in Congress in its relation to the civil service. If any official

"wants to make it appear that his manipulations of the civil service have all had in view, not the fixing of caucuses and conventions, but the public good, he must go on the stand, papers in hand, and stand examination and cross-examination, and he must not take refuge behind 'legal evidence,' either. He must furnish us with human evidence—that is, the evidence on which men transact the ordinary business of life."

And further on you say:

"Therefore it is most desirable that the Senatorial investigation, such as is now pending in New York, into the operation of the Civil-Service Law, should be held annually. Nothing else will prevent its being evaded or nullified on a greater or less scale."

I desire to point out that the conclusion here is not at all adequate to the premise. Such a Senatorial investigation is fatally defective in many ways:

(1.) It is always looked upon as a party affair. If the majority of the committee is on the side of the Administration, its report is regarded as "whitewash"; if opposed, as political hostility.

(2.) As the use of the offices is the most effective means by which Congress can control the Executive, there is no question that that body, as a whole, is opposed to the Civil-Service Law. It may be doubted whether any committee could be made up which, as a committee—that is, without personal responsibility—would have for its sole object the pure and impartial administration of that law.

(3.) The investigation is made after the fact, and not into any one, but a series of facts, so that public attention is confused and drawn away from the main points.

(4.) It is conducted in the absence of the offending party. In the various cases the responsibility of the several members of the Cabinet and of the President is all mixed up together. No one of them is heard, or subjected to the examination or cross-examination which you justly describe as so important.

All these objections would be done away with if the Cabinet officers made their public appearance regularly in Congress. In the first place, questions would take place by individuals upon their personal responsibility which, with the answers, would soon make clear whether they were guided by party spirit or not. Then, though committees are animated by the *esprit de corps* and gain nothing by departing from it, the case is very different with an individual. An ambitious man could, like Disraeli, *make* the House and the public listen to him and force a chance to win his spurs. Again, inquiry would follow directly upon the fact, and in each individual case; and, lastly, the very person who made the appointment or removal would have to speak for himself then and there, and the responsibility would be brought home directly to the President behind them all.

It is evident that the present Civil-Service Law cannot be kept effective without a constant strain upon public opinion. Mr. Cleveland has shown by his tariff message and his vetoes that he possesses an unusual degree of courage. If he cannot stand the pressure, who can? Mr. Curtis thinks the issue more important than tariff reform, and would even go the length of limiting the President by constitutional amendment to one term, though it needs little argument to show that this would by no means necessarily produce the desired effect, while it would have other and great disadvantages. But surely the whole future of politics ought not to be given up to merely keeping the machinery of government in order, to the permanent exclusion of everything else. If that machinery is good for anything, it ought, when once organized, to go of itself. Nobody in England ever thinks now of making a political cry of the condition of the civil service. That was settled once for all thirty years ago, and is kept in order by the fact that if ministers depart from the rules, they are called to prompt and personal account. That is the way, and the only way, in which the law can be made a real and vital force in this country. G. B.

Boston, June 2, 1888.

A TARIFF OF LONGITUDE.

To the Editor of The Nation:

Sir: Seeing in your quotation of Mr. Mills's speech the statement that the tariff is the same in every Territory of the United States, reminds me of one of the many idiosyncrasies of the tariff humbug. Unless I am mistaken, the tariff is *not* the same at the Pacific Coast as it is at the Atlantic Coast *on sugar!* Am I right? In California the infant industry of the Sandwich Islands has to be protected by *no* tariff, while at the East the infant of the sugar States cannot sleep without the soothing syrup of the tariff. What a snare this tariff is; and how many people honestly believe they want it, when in reality they want nothing of the kind.

Respectfully, W. Bodemann.

Chicago, May 30, 1888.

A PROTECTIONIST SCARE.

To the Editor of The Nation:

Sir: The following precious specimen of

tariff journalism is taken from the Philadelphia *Press* of May 25. It not only shows the desperate straits to which a protection organ is driven in these thoughtful times, but to those who accept it as truthful it presents a remarkable instance of the faith which the Ponty-Pool mill-owners have in an American "probability."

REJOICING AT THE MILLS BILL.

WELSH IRON MILLS GETTING READY TO FILL AMERICA WITH THEIR PRODUCTS.

SHARON, May 24 [Special].—An iron worker named Phillips of this city has received a cablegram from Ponty-Pool, Wales, apprising him that ten sheet mills and 130 puddling furnaces are about to start at that place, and asking him to return to take charge of one of the departments. A letter from a friend brings the information that the greatest activity prevails there over the probable passage of the Mills bill, and that it is on the strength of such a probability that mills idle for a long period are about to resume.

A REPUBLICAN.

PHILADELPHIA, May 26, 1888.

A MIXTURE OF SALTS.

TO THE EDITOR OF THE NATION:

SIR: In your excellent article this week on Chili's commerce and finances, I was sorry to see the statement, following the popular idea, that the export tax was principally on "saltpetre." This article, "nitrate of potash," is not produced in South America. What you should have mentioned, and correctly, for Chili exports vast quantities of it, is "nitrate of soda," a very different article, and having a different base. The confounding of these two articles, so different in themselves and in their use, is so common an error that I am induced to call your attention to this point, in an article otherwise so true in every respect. It is amusing to find how often, outside of manufacturers, people of education and those otherwise well posted in the knowledge of raw materials, confound these two great articles of import in this country, and mention them as though they were one and the same thing. This hallucination appears even among the chemists of the Government appraisers at times, and as saltpetre pays a duty here of one cent per pound, and nitrate of soda is admitted free, it causes some perplexities in appraising the invoices at the Custom-house when one salt is mistaken for the other. WM. L. PARKER.

BOSTON, May 31, 1888.

DE LUNATICO INQUIRENDO.

TO THE EDITOR OF THE NATION:

SIR: The feelings and ideas of that numerous class of men now banded together under the banner of "Blaine or bust," have just been brought forcibly home to me by the case of a man quite prominent in the city, and of most excellent good sense in almost everything outside of Blaine and protection. This very night, in conversation, this Mr. X. said in substance, with reference to Mr. Blaine's last letter, that this letter did not mean that Mr. Blaine would decline to be a candidate for the Presidency, but that he would run if nominated. This, of course, is equivalent to saying that Mr. Blaine does not mean what he says; but that is nothing, and does not prevent his being an eminently proper person to be elected President. Further, he, Mr. X., would much rather vote for Blaine and be defeated than to vote for several others of the Republican candidates and win. He is strongly opposed to nominating a man for whom any Mugwump might possibly be induced to vote, such a dreadful result being *ipso facto* proof that the candidate is not a good Republican, but on the contrary an object of grave suspicion. In other words, here is a presumably sane man uniting with the editor of the New York *Tribune* in an outspoken desire for a candidate whom no Mugwump can support, and for a "small and select" party into which none shall be allowed to enter unless they be devout worshippers at the shrine of the great god J. G. Blaine.

What mysterious influence can it be which produces this most remarkable state of mind? Would it not be a good plan, for the purpose of increasing our psychological knowledge, and at the same time of reducing the surplus, to induce Congress to pass a bill creating a commission of experts to inquire into the cause, development, and phenomena of "Blaineism"?

S. B. PLATNER.

ADELBERT COLLEGE, June 1, 1888.

THE METHODIST CONFERENCE.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "E. B." displays more zeal than knowledge in his remarks upon the action of the Methodist General Conference in excluding the women delegates-elect. Their opponents admitted their eminent services in the work of the Church, but denied their right to sit as delegates, on the ground that it would have been contrary to the organic law of the Church. I believe it is a maxim among lawyers that the intent of the law-maker is the law. It was proved conclusively by those who favored the law relating to lay delegation in the Methodist Episcopal Church that it never contemplated the election of women. Every one who listened to the long and somewhat tiresome debate on the question will admit that advocates and opponents alike showed the greatest eagerness to do them justice, and there was little disposition manifested to exclude them on principle. The Conference decided to refer the question to the whole Church, and if, at the end of four years, it shall have voted in favor of their eligibility, their title to seats in the Conference of 1892 will not be questioned by anybody. This is certainly better than to admit them on a questionable title for purely sentimental reasons.

I voted for the women because I was willing to interpret the letter of the law in their behalf, and because I believe that public opinion will soon bring them in anyhow. Yet I am willing to admit that the plan adopted will in the end be better, both for the women and all other parties concerned. A LAY DELEGATE.

THE VICE-PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: In connection with your timely remarks upon the Vice-Presidency, I would offer a further suggestion as a means of increasing the dignity of that office, viz., a considerable increase in the salary now pertaining to it. The difference between the salaries of the President and Vice-President, viz., $50,000 and $8,000, would seem to be out of all proper proportion, and it undoubtedly accounts to some extent for the general disesteem in which the office of the latter is now held. A mere increase of emolument may not be the most ideal method of elevating the popular conception of an office in itself more or less undesirable; yet, in the present state of popular notions, it is a very practical one. If the salary of Vice-President were doubled, or raised to $20,000, the office would at once become an object of more consideration for men of ability and ambition; its social importance would be heightened, and it would be less apt to be made the foot-ball of nominating conventions.

In case of such a change, there would be created, it is true, a marked disparity between the respective remunerations of the presiding officer and the Senators. This, however, would be little felt as long as so large a proportion of that body are men of great wealth, which has been and is likely to continue to be the case for a long time. In view, furthermore, of the grave responsibilities and difficulties which may at any moment devolve upon the Vice-President, the proposed increment ought not to appear excessive even to the average politician, who delights in as large a number as possible of moderate salaries for the many, over the bestowal of which he may hope to exercise a beneficent control, but dislikes and mistrusts large salaries for the few, paid to secure first-rate talent over which he can have little or no power. But to the imagination of the average American the money value of most positions is held as a fair register of their importance; and of this fact advantage might be taken to assist in lifting the Vice-Presidency out of the *nocuous desuetude*, so to say, into which it has undeniably fallen.—Very truly, F. C. EATON.

COLUMBUS, O., May 29, 1888.

POLITICS IN JAPAN.

TO THE EDITOR OF THE NATION:

SIR: Important changes have just been made among the Government officials. First of all, a Privy Council has been established, to consist of a dozen or more members, besides the President, the Vice-President, and Cabinet officers, who are *ex officio* members. This Council will be composed of men of different factions and political opinions. It will, therefore, be somewhat of a representative body, and will become an important factor in shaping the policy of the Government. This Council will have special consideration of all ordinances which are to be issued, and of the Constitution which is to be drafted. Moreover, questions of public policy, heretofore settled only by the Cabinet Ministers, are hereafter not to be decided without the assent of this Privy Council. To constitute a legal meeting of this body, the attendance of at least ten members has been established as a quorum. It will now be a much more difficult matter to procure the issuance of such a proclamation as the one of last Christmas. Some Japanese newspapers criticise the establishment of this Council because in England such a body has become useless, and has fallen into disrepute; but many people think that here it will be a necessary institution, until the meeting of the new Parliament in 1890, and then it will be abolished.

Count Ito, in accordance with his request, has been relieved of the office of Prime Minister, and transferred to the duty of President of the Privy Council. He has also been especially invited by the Emperor, as a mark of confidence and honor, to be present at the meetings of the Cabinet. Count Ito has been a faithful and indefatigable Prime Minister for more than two years. During his term he has been accustomed to devote four or five hours a day to consultation with foreigners upon questions of governmental policy. And, even during his vacation, when he had retired to his summer residence for rest, he took his private secretaries with him, and devoted considerable time every day to similar consultations. He has been especially interested in the drafting of the Constitution, and has already issued new municipal laws. In fact, one reason for his transfer from the arduous duties of the Prime Minister to his new position was, that he might be able

to devote himself particularly to the development of the Constitution.

The new Prime Minister is Count Kuroda, who has filled various important offices, military and civil. He served as Governor of Hokkaido at the time when attempts were made to colonize and develop the northern island of Yezo. When that enterprise, chiefly on account of the great expense, became unpopular, he lost the public favor. But he has been growing popular again, and was lately called into the Cabinet. Now, as the tide of public favor has ebbed away from Count Ito, Gen. Kuroda assumes the Premiership. The latter has more reputation for generalship than for statesmanship; but he is an acute observer of all things, and will not be likely to establish a military despotism. He has strong political opinions, but he will respect public opinion. He is popular socially among the natives and foreigners, and is friendly to the latter.

These appointments have been made quietly and without resort to assassination, which has been thought to be the Japanese method of effecting changes among their public officials. They are hailed as indications of a more popular policy, which will aim to unite all factions and to represent the different opinions. They seem to indicate the development of a good constitution, which will be neither ultra-German nor ultra-British, but will be framed upon a model which shall incorporate the best points of both. It is thought that thus a constitution best adapted to the needs and circumstances of Japan will be developed. One thing is certain, that the Japanese Government desires to improve its methods and to deserve well of other nations. It is, therefore, hoped that it will not receive unjust censure, such as to discourage it in its efforts; but that, even if it sometimes makes mistakes, it will receive encouragement from all who rejoice in progress in civilization.

E. W. Clement.

Mito, Japan, May 5, 1888.

Notes.

G. P. Putnam's Sons announce 'In Castle and Cabin; or, Talks in Ireland in 1887,' by George Pellew; 'A Sketch of the Germanic Constitution, from the Earliest Times to the Dissolution of the Kingdom,' by Samuel Epes Turner; 'The Tariff History of the United States, from 1789 to 1888,' by F. W. Taussig; 'Industrial Liberty,' by John N. Bonham; 'Suggestive Therapeutics: a Study of the Nature and Uses of Hypnotism,' from the German of Dr. H. Bernheim; 'The Story of Turkey,' by Stanley Lane-Poole; 'A Hard-Won Victory,' by Grace D. Litchfield; and 'The Gallery of a Random Collector,' by Clinton Ross.

'Is Protection a Benefit? A Plea for the Negative,' by Prof. Edward Taylor, will be issued directly by A. C. McClurg & Co., Chicago; also, 'The National Revenues,' twenty-one essays, mostly by Eastern economists, edited by Albert Shaw of Minneapolis, and by no means harmonious in opinion.

We have already spoken of 'The Masters of Wood-Engraving,' the important work which Mr. W. J. Linton is engaged in bringing out in England. Specimen pages of it, now before us, show that it will rank very near the head of its class in mechanical execution. The size is called "short royal folio," and on a double page admits cuts of twelve by eight. Those inserted in the text are printed on a tinted ground, and deftly pasted in, the derivation being indicated in the margin. The typography is very fine. The work is obtainable only by subscribers, who, for a copy of the edition of 500, must pay ten guineas; and for the large-sized edition of 100, twenty guineas. Mr. Linton's address is 4 Trafalgar Square, Charing Cross, London.

Dr. Anton Bettelheim of Vienna is engaged in preparing a biography of Berthold Auerbach, and asks to be aided in his undertaking by those who possess letters from the novelist or are able to communicate reminiscences of him. Dr. Bettelheim's address is Währing, Feldgasse 35, Vienna.

Four more volumes of the substantial Library Edition of the joint works of Walter Besant and James Rice have been issued by Dodd, Mead & Co., viz.: 'By Celia's Arbor,' 'The Monks of Thelema,' 'This Son of Vulcan,' and 'With Harp and Crown.'

"Paracelsus" and "Strafford" fill the second volume of the new edition of 'The Poetical Works of Robert Browning,' which the author is now seeing through the press (Macmillan & Co.). We are pleased afresh with the simplicity and portability of these volumes, so well adapted for the lover of poetry.

Shakspere's "Coriolanus," Hecker's 'Black Death' and 'Dancing Mania' (translated by Babington), a second and last volume of Sir John Malcolm's 'Sketches of Persia,' the last but one of Pepys's 'Diary,' and Milton's 'Areopagitica,' carry along "Cassell's National Library" to its 123d issue.

The best of the prose selections in 'George Riddle's Readings' (Boston: Walter H. Baker & Co.) is the first, "Come Here!"—from the German. The hitherto unpublished pieces expressly written for Mr. Riddle, and which help make the collection, as he says, "fairly representative" of his work as a miscellaneous reader, are beneath criticism, and only prove once again how prone "readers" are to unevenness in choice, and how little they do to elevate the literary taste of their audiences. The same reflection has often to be made in the case of school reading-books and works on elocution.

A small pamphlet called 'A Paper on Bass Fishing,' by Charles Barker Bradford (Pond Publishing Co.) is devoted chiefly to informing the public where black bass can be caught in quantity within an hour's ride of New York. It must be that Mr. Bradford is either going to give up angling or change his residence from the neighborhood of New York, for certainly he would never otherwise have publicly revealed that paradise of a lake near Rahway, New Jersey, whose inlet is a lovely stream from which, for more than two miles, "any man who knows how to handle a rod or throw a fly can land or at least hook some of the liveliest two to three-pounders he could wish for." An edition of twenty-five copies on large paper should have been privately printed and distributed among the tried angling friends of the author. The last few pages of the paper give ample instructions on bass fishing.

Bragg's invasion of Kentucky, East Tennessee and the Campaign of Perryville (by Gen. Buell), Cumberland Gap, the Battle of Fredericksburg (by Gen. "Baldy" Smith and others), and Chancellorsville, furnish stirring reading in Nos. 17, 18, of 'Battles and Leaders of the Civil War' (The Century Co.).

'Deutschland und die Deutschen' is a small volume by Dr. H. Kostyák and Professor A. Ader, published by The Modern Language Publishing Company. Apparently designed for translation by learners of German, it is in manner similar to an article extracted from an encyclopædia. The matter is broken up into paragraphs, each of which has its own heading, and which contain a good deal of useful information. The desire to compress many things into a small space necessitates a degree of condensation that often produces a comical effect. This is especially noticeable in the portions devoted to literature and art. Thus, one is surprised to see Hebbel, Freytag, and Hackländer yoked together, and to find among novelists no mention of Ebers and Dahn. Equally odd is the juxtaposition of Meyerbeer with Offenbach and Strauss. Most amusing of all are the remarks on German manners and German society, which, we are told, are more high-bred and elegant than among any other nation.

The Duc de Broglie has published two more volumes of his series of histories of the great diplomatic and military conflicts of the eighteenth century, in which the prominent figures are Louis XV., Maria Theresa, and Frederick the Great, with their generals and ministers, official and unofficial. It is entitled 'Marie Thérèse impératrice' (Paris: Calmann Lévy; Boston: Schoenhof).

The same publisher has just issued the work upon which M. Albert Duruy was engaged during the last months of his life, and of which the third and concluding part appeared in the *Revue des Deux Mondes* for August 15, 1887, only a few days after his death. It is called 'L'Armée royale en 1789,' and was originally intended as an introduction to a great work, for which the author was arranging the materials when he died, upon the French army of the Revolution and the Empire. The present volume is preceded by an interesting biographical introduction, written by the younger brother of the author, M. George Duruy, Professor of History at the Lycée Henri IV., and author of 'L'Unisson' and other novels which have appeared within a few years with much success. M. Victor Duruy, the Academician and former Minister of Public Instruction under the Empire, the father of the two younger men, is now giving at intervals, in the *Revue des Deux Mondes*, long passages from his new 'Histoire des Grecs.' Hachette is publishing this work in similar style to the new 'Histoire des Romains' of M. Duruy, which was completed in seven large octavo volumes in 1885, and which is rather a new work than a new edition of his former 'Histoire des Romains,' first published in 1870-74.

M. Henry Houssaye's new book, '1814' (Paris: Perrin; Boston: Schoenhof), is the story of the year which might be called in France, with more reason even than 1870, *l'année terrible*. It is not a mere piece of rhetorical writing, but a mass of facts drawn from official reports and letters in the National Archives, the Archives of Foreign Affairs, and of War, from the memoirs and correspondence of persons of weight, etc. It is written with animation and spirit, although, in the fashion of the day, it is excessively *documenté*, and it is always clear and easy to read, although its abundant materials are compressed and crowded upon each other, sometimes to almost as great an extent as would have been done by M. Taine himself.

A. Giry's 'Étude sur les Origines de la Commune de Saint-Quentin' (Saint-Quentin: C. H. Poette) is an admirable monograph, throwing much light upon the general development of the mediæval French municipality. The difficult problem of the origin of the town jurisdiction, "le tribunal des échevins," is treated with much fulness and ability (pp. 31-67). Since the death of Thierry, no one has made more valuable contributions to the literature of French municipal history than Professor Giry. He has not Thierry's brilliancy of style, but he excels the latter in accuracy of detail.

An interesting work concerning the economic history of Spain has recently appeared, entitled 'Die wirtschaftliche Blüte Spaniens im 16.

Jahrhundert und ihr Verfall' (Berlin: Gaertner. Pp. 179). The author, Konrad Haebler, attempts to prove that most writers wrongly ascribe to the reign of Charles V. a decadence in the economic condition of Spain; that in reality this was a period of economic progress, and that the retrogression began under his successor, Philip II. The book contains much useful information, but also many misleading views. We doubt whether he has proved his main proposition.

There has just been issued, from the office of the *Publishers' Weekly* and *Library Journal* (330 Pearl Street, New York), an 'Author-Index to the Coöperative Index to Periodicals' for 1887. The 'Coöperative Index,' we should be glad to think all our readers were aware, is the voluntary labor of the leading librarians of the country in continuation of 'Poole's Index;' in other words, it is a quarterly key to the best current periodical literature. The 'Author-Index' furnishes the names of the writers, so far as known—and they *are* known or are ascertained in the majority of instances. Its utility needs no words from us, but we are glad to praise the disinterested toil which has produced it.

In the *Magazine of American History* for June we remark Dr. G. E. Manigault's article on the "Military Career of Gen. George Izard," best known as one of the inglorious American commanders in the war of 1812, on the Canadian border. The present writer seeks to vindicate Gen. Izard's reputation by justifying his prudence; but he perhaps succeeds best in conveying the impression that the family papers would afford material for a rather interesting memoir, picturing both the man and the times.

Mr. M. D. Learned's chapter on "The Pennsylvania German Dialect" is the least technical of the papers contributed to No. 33 of the *American Journal of Philology*. It is a fragment of a considerable treatise, but it shows well the curious complexity of the German dialects commonly confounded under the name of Pennsylvania "Dutch," as well as the great mixture of language, and nationalities, or "ethnic elements," in the early settlement of Pennsylvania, from which much might be deduced with reference to the development of the State. The German dialectic characteristics, we are told, are still traceable.

An article on the "Winter-Roosting Colonies of Crows" was perhaps hardly to be looked for in the *American Journal of Psychology*, though we must admit the bearings of brute intelligence on human, and we recall the test of the counting capacity of the crow, which proved that he got fatally confused above five or six. Mr. C. L. Edwards studies them, in the May number just issued, for the manifestations of the social instinct, but without much psychologizing. Quite in line, on the other hand, is Dr. William Noyes's description of a case of "systematized delusional insanity" on the part of an American pupil of Gérôme, whose symbolic art aberrations are copied in facsimile, and show him to have the decorative sense in a rather unusual degree. Other articles are "A Study of Dreams," by Julius Nelson, which is curious and suggestive, though in parts hard reading; and "The Relative Legibility of the Small Letters," by E. C. Sanford—a very practical discussion.

L'Art for May 1 (Macmillan) comes rubricated as the Salon number, and M. Paul Leroi has, in fact, the floor entirely to himself. The illustrated memoranda of the pictures (or the sketches for the pictures) are mostly of the grades employed in the Salon catalogue. A full-page etching, "Tulip Culture," is reserved for an American artist who has made Holland his chosen field, Mr. George Hitchcock; but it was his last year's contribution. His "Annunciation Lilies" of the present exhibition has been skied, M. Leroi complains.

The twentieth annual meeting of the American Philological Association will be held at Amherst, Massachusetts, beginning at three P. M., Tuesday, July 10, 1888, in Walker Hall, Amherst College. Members intending to be present are requested to send their names to Mr. L. H. Elwell (Amherst, Mass.), Chairman of the Local Committee, as soon as possible. Those who propose to read papers are requested to notify the Secretary of the Association, Mr. John H. Wright of Harvard University, not later than Thursday, June 28.

—The *Century* for June brings us the first of the direct observations of Russian prison life made by Mr. Kennan, and it comes with sufficient evidence of the sanitary condition which the Russian Government knowingly tolerates, to satisfy the most reluctant reader. There is nothing in this particular case which shows unusual rigor towards the political prisoners, but rather it is an illustration of the state of things which is normal in the prison management for all classes. The details are given with distinctness, and the figures are taken from authoritative sources; nearly twenty thousand exiles pass through this station of Tiumen yearly, and the sick-rate is more than one in four. It has accommodation—Siberian accommodation—for eight hundred, and usually confines eighteen hundred in its walls. The picture of the scene, with its sickening details, the reader may see for himself, as no abridgment can convey its inhumanity. But it is only fair to remember the condition of European prisons not very long ago, when passing judgment on the Government that permits such places as this prison-pen to decimate and debase its criminals and their families. The remainder of the number is unusually well illustrated, and in particular Mr. De Vinne's interesting paper upon the Antwerp publisher, Plantin. Mr. John Burroughs writes upon Matthew Arnold, in a somewhat heavy and involved way, it is true, but with appreciation for the ideals and some grasp of the method of the Englishman in whom the purely literary spirit has had most complete sway. Arnold illustrates the excellences and defects of this spirit with remarkable clearness, but Mr. Burroughs has an eye only for the former. It is noticeable that the writer treats Arnold's religious writings with altogether unusual respect. The Lincoln biography furnishes an interior view of the Frémont campaign in Missouri, and an estimate of the Blair family by the President, a valuable criticism of Lincoln's on Frémont's emancipation proclamation, and a painful letter from Horace Greeley after Bull Run. The departments are unusually excellent.

—Mr. Francis Galton, in a communication recently made before the British Anthropological Institute, deduced some interesting conclusions regarding brain-size and brain-development, which are not exactly in harmony with the generally preconceived notions on the subject. These conclusions are, as stated by himself (*Nature*, May 3): (1.) Although it is pretty well ascertained that in the masses of the population the brain ceases to grow after the age of nineteen, or even earlier, it is by no means so with university students. (2.) Men who obtain high honors have had considerably larger brains than others at the age of nineteen. (3.) They have larger brains than others, but not to the same extent, at the age of twenty-five, the predominance at that time being diminished to one-half of what it was. (4.) Resulting from the preceding, "high honor" men are presumably, taken as a class, both more precocious and more gifted than others. Consequently, Mr. Galton thinks, we must "look upon eminent university success as a fortunate combination of these two helpful conditions." These interesting observations, which open up a broad vista into a new line of physiological inquiry, are based upon a series of carefully conducted measurements of "head products" and "relative brain volumes" made during a period of three years by Dr. Venn on students of Cambridge University.

—Volume ix of the *Goethe-Jahrbuch*, for 1888, is at hand. As compared with some of its predecessors, especially volume vii, it contains less that is of interest; but the Goethe student will not leave it empty-handed. The volume opens with a reproduction of Angelica Kauffmann's drawing, illustrating the scene in Goethe's "Iphigenie" (iii, 3), where *Orestes*, just recovering from his delirium, greets *Iphigenia*, who returns with *Pylades* to her brother's aid. The scene and figures have an air of softness and tenderness; there is a pathos and sentiment as in a woman's conception of a scene in a drama whose central figure is a woman. "Gemüthlich gezeichnet," is Goethe's comment on the sketch in a letter of June 8, 1787. Like its predecessors, the contents of the present volume are classified under the heads of New Communications, Essays, and Miscellanies; it contains also the report of the Goethe Society and a list of its members, with a list of the members of the sister society in England. Under the first head the contributions from the Goethe archives in Weimar deserve chief mention. Three fragments in verse come first, a Prometheus fragment and two Faust scraps, entitled "Abkündigung" and "Abschied"; the latter quite in the tone of Goethe's letters to Schiller during the last decade of the past century, when "Faust" was to the poet a relic of barbarism, a reminder of dark days before his sun "rose wondrous in the south."

> "Und so geschlossen sei der Barbareien
> Beschränkter Kreis mit seinen Zaubereien."

are the words with which Goethe here would take leave of a task which was to accompany him his whole life through.

—Among the letters which the archives furnish us, those written by Schopenhauer, then just entering upon his career, in the years 1814–18, are of interest for the light they throw upon the young philosopher, supplementing, as they do, the other side of the correspondence already published. Schopenhauer came into personal contact with Goethe as early as 1811; his mother's acquaintance with the poet dates from a period five years earlier, at which time, after her husband's death, she took up her abode in Weimar. Goethe's theory of color seems to have formed the bond between himself and Schopenhauer; it is on that, and not on philosophy or poetry, that this correspondence turns. Schopenhauer had intrusted to a friend a work of his own, "On Sight and Color," to be put in Goethe's hands for his inspection. Eight weeks passed, and Goethe had not even acknowledged the receipt of it, and Schopenhauer, with the young author's anxiety but with no timidity, wrote to learn of its whereabouts. Goethe replied reassuringly, and Schopenhauer sent a long letter—some ten printed pages—in which he sets forth the points in which his theory of color differs from that of Goethe. It is full of self-confidence and conceit, uttered with a most delicious frankness. But Schopenhauer failed in his main endeavor, to prevail upon Goethe to stand godfather to

his work when published, and Goethe returned it after some six months, amid jealous fears on the author's part that some one else might have seen the manuscript and possessed himself of the precious discovery. The last of the letters is written in 1818, just before Schopenhauer's departure for Italy, and contains an announcement of the speedy publication of Schopenhauer's *magnum opus*, 'Die Welt als Wille und Vorstellung,' the title of which, he tells Goethe, is known to no one except himself and his publisher. Of the four Essays in the *Jahrbuch*, two are devoted to "Wilhelm Meister." Biographical notices of Scherer, Vischer, and Goedeke appear among the Miscellanies, which close with some seventy-five pages of bibliography. The report of the Goethe Society shows it to be in a most flourishing condition; at the end of January, 1888, the Society numbered 2,883 members, including 201 members of the English Society, a gain of 223 in ten months, while the funds in the treasury amounted to nearly $3,400.

—Doubtless many readers of the *Nation* are old enough to remember the sensation produced in 1835 by the publication of Locke's "Moonhoax," describing the condition of the moon as observed by Sir John Herschel at the Cape of Good Hope through a new telescope of extraordinary power; but probably few are now aware of the wide currency obtained by this clever performance. It was in vain that Arago pointed out to the French Academy its scientific impossibility in December, 1835. Four months afterwards, in April, 1836, an Italian version of the pamphlet appeared in Naples, translated, according to the title-page, from the one hundred and fourth French edition. It was accompanied by a preface gravely arguing that, in spite of M. Arago's criticisms, the scientific details of the work were too minute to be suppositious, and it had as a frontispiece a fairly executed copper-plate representing one of the "man-bats," or winged beings, discovered by Sir John in the lunar world. A copy of this brochure now before us serves to point the moral that we ought not to be too severe upon the credulity of our ancestors. Much of our wholesome modern scepticism may be attributed rather to the facilities for conveying intelligence and contradicting falsehood than to any radical change in our mental processes.

RECENT NOVELS.

Robert Elsmere. By Mrs. Humphry Ward. London: Smith, Elder & Co.

One Traveller Returns. By D. Christie Murray and Henry Herman. Longmans, Green & Co.

A Brother to Dragons. By Amélie Rives. Harper & Brothers.

Maximina. By Don Armando Palacio Valdés. Translated from the Spanish by Nathan Haskell Dole. Thomas Y. Crowell & Co.

Herr Paulus. By Walter Besant. Harper & Brothers.

For the Right. By Karl Emil Franzos. Given in English by Julie Sutter. Harper & Brothers.

Mr. Absalom Billingslea and Other Georgia Folk. By R. M. Johnston. Harper & Brothers.

FROM the beginning it is clear that the reading of 'Robert Elsmere' will be a serious matter, and to throw the book aside after skimming the first chapter would not be proof of radical frivolity. Mrs. Ward has attempted, if not to identify, at least to harmonize, conflicting interests, and to incorporate, in a form that promises mental distraction, matter which demands mental concentration. She has tried to write a novel and to preach a regenerative gospel, and if she has not utterly failed in either task, she has not achieved a success commensurate with the industry, vigor, and enthusiasm expended. She is infected with the common hallucination that the literary instinct and urgent moral and religious purpose are natural yoke-fellows, efficiently supplementary each to the other. The truth is, that the literary instinct makes for art, the moral purpose for reform, and a forced partnership results in disaster to the weaker impulse, and even in enfeeblement of the stronger. Power may be born in the brain, but its trusty reserves are in the heart, and Mrs. Ward's heart is filled to overflowing with her gospel. The necessity to observe, in any degree, the conventions of fiction is a constant check upon complete utterance of her mission, and a bar to her efficiency as a propagandist. Exclusively possessed by her purpose, she has been blind to a novelist's first care and duty, which is to project living people upon his page. Her prominent figures are merely conveniences helping memory to hold the threads of argument. Catherine, Elsmere's wife, is a concrete image of conservatism and tradition, of positive hostility to progress. She is a rock in the path of intellectual curiosity, and resents implacably its attacks upon her creed. A strain of asceticism in her recalls George Eliot's Dorothea, though in the matter of jewels Catherine is the more liberal, condescending to wear hair bracelets and, on occasion, a pin at her throat. Her sister, Rose, stands for art, and is permitted all the vagaries of manner and costume conceded to be the privilege of art abiding in the form of a lovely girl. Langham, the Oxford scholar, represents that indifferentism which is lately become the distinction of the fastidious, hypercritical man of letters. He embodies the negations of life, and, separated by the uncontrollable processes of his mind from sympathy with the aims of other men, is finally confronted with the impossibility of making common cause with them.

The author is not fond of Langham, yet he alone is thoroughly realized. His personality, apart from his type, is interesting. He has been spared the elaborate description bestowed upon the heroes and martyrs. In comparison with creation, description is child's play, and Mrs. Ward has freely availed herself of it, often to the reader's sore deprivation. Some specimens of the Irish fun and originality of Elsmere's mother would have been very acceptable; a sprinkling of Mme. de Netteville's brilliant audacities would have enlivened the three volumes amazingly. The most serious person could have enjoyed the suppressed racy stories told by the Squire about Mommsen and Ranke; something more of scholarly books than the title and author's name might have provoked comparison with George Eliot, instead of with that repository of impressive nomenclature, the author of 'Beulah' and 'St. Elmo.'

Of the literature that assails and denies the divinity of Christ, Mrs. Ward has indeed read widely, and has sufficiently assimilated her reading to reproduce the most obvious arguments lucidly and forcibly. Her information is used in the development of Elsmere, who is identified with her all-important purpose. This purpose is to demonstrate by the literary and historical, the comparative method, that Christ is not God, thus annihilating the mysticism, what she calls the mythology and superstition, of Christianity. Having destroyed, she proceeds to construct by promulgating a pure Theism, strengthened, for practical purposes, by acceptance of the ethical preaching of Jesus of Nazareth. She rejects the dogma of Christianity, yet cherishes what she believes to be its essence and spirit. She speaks scornfully of Unitarianism, yet it is difficult to see just where she differs from it. Criticism of her work from the premises that Christianity is an isolated religion, and that the Bible is a direct revelation from God, not to be weighed and sifted by methods justly applicable to books of merely human testimony, would inevitably be undiscriminating, probably disingenuous, yet, willing as one may be to go along with her, her unconscious partisanship is uncomfortably manifest.

In the great crisis of his spiritual and actual life, Robert Elsmere exclaims:

"Every human soul in which the voice of God makes itself felt enjoys equally with Jesus of Nazareth the divine sonship, and *miracles do not happen.*"

And again:

"I can no longer believe in an incarnation and resurrection. Christ is risen in our hearts, in the Christian life of charity. Miracle is a natural product of human feeling and imagination; and God was in Jesus—preëminently as he is in all great souls, but not otherwise—not otherwise in kind than he is in you and me."

It is to support these convictions that Mrs. Ward rallies all her evidence. On the other side there is almost a blank: not a word of the appeals to the intelligence at the tongue's end of those who are both rational and faithful; nothing but incoherent tirades from a ritualist priest, and the untimely quotation of Christian axioms by Catherine. We are told that Elsmere struck manfully for the dear faith that was slipping away from him; we see him silenced by some trite arguments advanced by a confirmed sceptic, unarmed and defenceless before a few books redolent of commonplace for students of religion. The weakness of this situation, which is the central one, is incredible, and thereby Mrs. Ward has delivered herself into the hands of the enemy. Yet the enemy, if tolerant, will treat her charitably, and, while deploring her heresy, must acknowledge her love for the things that are true, honest, just, pure, lovely, and of good report, and her intense eagerness to point a way by which humanity may be led to the Kingdom of God and his righteousness.

After this lengthy contention that Christianity, in its full, real meaning, is and ought to be an expiring faith, it is restful to contemplate Christianity coming as tidings of great joy to joyless multitudes. The scene of 'One Traveller Returns' is in Britain, at the time when, though the gods of Greece and Rome tottered in their shrines, the Britons still served their fearful Bel and There and Odan, their souls held in bondage by a most cruel and oppressive priesthood. The good news is just being whispered in the Isles, and everywhere the people are prepared to substitute a religion of love, peace, and freedom for one of hate, bloodshed, and slavery. Through purely human agency the light dawns upon the Corleans, but, to reveal its splendor, the order of nature is disturbed, a miracle happens—their dead Queen Vreda is permitted to come back to earth and dwell among them. The story opens with the poisoning of Vreda by Barxelhold, the wanton daughter of the arch-Druid Wenegog. In this crime the girl's lover, Feltor, the King, is accomplice. Vreda passes from life into death—that is, to an estate where, physically, she neither feels, sees, nor hears, but, spiritually, is aware of all things, both in the old life and in the new. The description of Vreda's existence in her new state is remarkable for its clear realization and clever avoidance of phrases and words applicable

only to physical being. Perceiving the misery and hopeless ignorance of her people, a great longing to help them possesses Vreda, and, when the longing shapes itself into an anguish of entreaty, the miracle happens: she is on earth again charged with the mission of a nation's salvation. Through the love and voluntary suffering of one, the redemption of many is accomplished.

In narrating stories of the supernatural, it is the custom to excite horror or terror, thus subjugating reason to emotion. Here, these expedients are rejected, yet the reader's sense for probability is not outraged. The action is continuous and smooth, and the dramatic instants occur so spontaneously that mere verbal effect can well be dispensed with. The impression left of familiarity with people of a remote era and with a life long gone by, bears testimony both to the authors' mastery of the art of fiction, and to their critical perception of the historical material that best serves their art.

In the youthful effusions of the writers who make a literary epoch, the influence of great predecessors both upon thought and style is always more or less evident. It is the natural expression of the devotion of the disciple to the master, and the future of the young writer may be predicted with some certainty from his selection of models and the way in which he has used them. The three stories in the volume entitled 'A Brother to Dragons' owe their existence to the attraction for the author exercised by the fathers of English imaginative literature. The influence of the Elizabethans is marked in degree and exceptional in kind. While the impression made by the essence of their genius is scarcely discoverable, that of certain minor manifestations is unprecedentedly strong. There is no trace of the immortal part of Shakspere, of the rarity of Ben Jonson, no echo of their exuberant life, their fine, free thought, their daring yet delicate fancy. The Shakspere of the groundlings speaks from every page. *Juliet's Nurse* and *Mistress Quickly* are the animating forces. To reproduce the sentiments and diction of these engaging prototypes the device is adopted of putting the tales in the respective mouths of a gardener, a blacksmith, and a nurse. The title story, "A Brother to Dragons," on its first appearance in the *Atlantic Monthly*, was received with such general approbation that an examination may prove instructive to young authors anxious first to secure a reputable editor and after that the public. It will certainly encourage the humble and faint-hearted, appalled by the practical difficulties believed to stand in the way of ambition soaring in that direction.

The heroine is a Lady Margaret, astoundingly beautiful, and a rich orphan. Her accomplishments are chiefly muscular. She rides a horse "few men would dare bestride"; she swims "like a sea-maid," and is a crack shot with a long-bow. Her only companions are the narrating gardener and his wife, the lady's nurse. The impression that nobly-born English ladies of the Tudor period were always relegated to such companionship is not one for which the Elizabethans should be held responsible, but it has an inalienable hold on the minds of the producers and consumers of that nineteenth-century fiction which will probably be snubbed by future historians. Wearied one day by the chase, or some such characteristic occupation, the Lady Margaret throws herself upon her couch of skins, and there, apparently, falls asleep. But she is "playing 'possum," and drinks in a conversation between the gardener and the nurse, in which gross facts are stated in grossest fashion. The subject of this talk is the "bad and bloody Lord of Denbigh," and the result is to inspire a flower of innocence with a resolve to save his valuable soul. Presently up rides the "wicked Earl," and preparations for his salvation are actively begun. With the courage of her resolves, the lady assumes the disguise of a young gallant. To hinder the Earl from engaging in some deviltry, the exact nature of which is shrouded in mystery, she imperils her life. The Earl's reformation is effected, and his eternal devotion to his fair saint secured. By the time he weds the lady, his innocence and virtue are fit to stand beside her own; he is reduced to the cooing stage of babyhood, quite (as the author would say) "an he had been any christom child." The narrating gardener alternates comparisons of hair with buttercups and butterfly wings, of hands with white rose leaves, and a coarse sensuality of phrase that not infrequently slips into licentiousness.

This predominating strain of coarseness runs through the two remaining tales. In "The Farrier Lass" there is a strong though not novel conception of character capable of a development of which simplicity and purity would be the distinction. In the third, Nurse Crumpet tells her tale to two noble nurslings with small deference *virginibus puerisque*. Her theme is the determination of an obstreperous Lucasta that Lovelace shall not go to the wars. Vainly does Lovelace plead in violent prose—

> "I could not love thee, dear, so much,
> Loved I not honour more."

Lucasta locks him up in a cave, and there, though she has thoughtfully provided bread and wine, and though he is a healthy fellow (what the author neglected to describe as a "most lustick youth"), he dies in a short time, apparently of starvation. This situation has originality, and so has the rough-and-tumble fight between the two women in front of the cave, when Lucasta defends herself "like a she-wolf at bay, with teeth and talons, too." To point out the abuse and misuse of archaic phrases and words throughout the volume would be as profitless as disagreeable. They are testimony in detail of the vast inexperience of life and of the comprehensive ignorance of literary proprieties which distinguish the work and make its best apology.

The secrets of the heart, the most tender and intimate relations of life, are treated in 'Maximina' with charming refinement. Situations peculiarly susceptible to vulgarization are described with a frank naturalness which, while exhibiting their naïveté and humor, leaves their delicacy unimpaired. Commonplace, domestic life is idealized, invested with poetry and grace, by an author whose insight and sympathetic feeling enable him to penetrate beneath the surface, and to disclose, without offence, the hidden truth. Nothing could be more romantic than the spirit of Miguel and Maximina's young married days; nothing more ordinary than the facts. Except for her genuine femineity, Maximina is not an interesting woman. She is a sprightly, ingenuous child, exclusively interested in her personal happiness, with which Miguel's is identified. In the course of time she would probably have tried Miguel sorely; therefore, to those who believe in the pitiless logic of character, the pathos of her early death is not tinged with sorrow. Inevitably the time must have come when a man of Miguel's temperament would have demanded more congeniality of thought, more intellectual sympathy, than Maximina could ever give him.

In following Miguel's career one is sensible of the author's conviction that a man's character is responsible for his destiny, and that the seemingly gratuitous cruelty of circumstance is the material put in his hands to mould his character. He is essentially a man with more impulse than judgment, more sentiment than practicality. Bitter experience is needed to show him his natural possibilities and limitations, and never could he be taught to use his world for his own advantage. Therefore, his political experiences are at once pitiful and amusing. Any one, except himself, could foresee certain disaster as the result of his meddling with affairs demanding for successful conduct almost every quality that he lacked, and none that he possessed. In the political passages the author's contemptuous irony suggests that, at the time, the Spanish "machine" was so hopelessly bad that serious condemnation would be wasted. It is evident that professional politicians are the same all the world over, and there is a ludicrous resemblance between the methods of the Spanish machine and machines nearer home. The fortunes of many interesting people touch those of Miguel and Maximina, and, though not closely interwoven, make a natural social surrounding. There is no technical plot, no centre of interest; and attention is not riveted on one object, any more than it is in life itself. This method is fairly satisfactory when adopted by a master of selection like Valdés, but it would surely bring the average novelist to grief.

Unquestionably Mr. Besant is as familiar as was his hero, 'Herr Paulus,' with "the whole of the Spiritualist business from the common medium with his taps to the occult philosopher with his mahatmas." There is nothing that he doesn't know about Spiritualism, and nothing that he hesitates to expose with genial candor and irreverent glee. His stage is the house of an elderly wealthy person to whom messages and manifestations are as the breath of his nostrils, and upon whose credulity mediums of every degree of worthlessness have thriven for a score of years. When the star, Herr Paulus, appears, the minor actors shrink away into the gloom of the wings. The tricks of Herr Paulus are wonderful and baffling even to his fellow-rogues, who, like all spiteful and envious artists, resort to sarcastic criticism and angry denunciation. But the elegant young apostle, the disciple of sages learned in the ancient way, tramples ruthlessly on the discomfited. His career is a succession of victories, until love for a woman deprives him of his mystic power, and he becomes helpless as Samson beneath the shears of Delilah. With all his conjurer's tricks explained, Herr Paulus remains a very subtle and astute young man, endowed with extraordinary mesmeric power, and many of his performances are as inexplicable to common intelligence as if they were really supervised and directed by departed spirits. It is no wonder that he confounded the simple and bewildered the sceptical. He was almost clever enough to convince himself that he had something inestimably precious to impart to the worthy people who chatter about esoteric Buddhism and the wisdom of the adepts, and almost ingenious enough to persuade science that its wisdom is folly and its boasted truth the most arrogant of assumptions.

A belief in God's justice and a passionate purpose to enforce its practice among men inspires the author of 'For the Right.' The belief is implanted in the heart of Taras Barabola, a Galician peasant, and the purpose both glorifies and wrecks his life. The nobility of his nature is not diminished by his mistakes, nor by his terrible actual failure. A man dominated by one idea is apt to be fanatical, and to be always harping on one string is more tiresome in fiction even than in reality. The

account of the struggles of Taras to establish justice is tiresome, and is only saved from dulness by the picturesqueness of his sphere of action and the exciting incidents of his career as an avenger. Still, one never loses perception of the grandeur of the man's soul, and the keenest sympathy with his efforts is roused by recognition of their error and futility. Apart from interest in the theme of the book, there is much to attract in the description of a comparatively unknown people—a people still living under a mitigated feudal system, yet ready to fight to the death for any infringement of the rights traditionally theirs. The light thrown on the religious belief and practices of an isolated community ostensibly Christian is particularly interesting. There is a curious survival of Paganism in a race which, nominally adhering to the Eastern Church, still worships the sun and moon, the lords of light, and, while placing a crucifix at the head of a dead man, puts beside him the skin of a kid and salt for "the other gods."

The stories in the volume entitled 'Mr. Absalom Billingslea' are a series of sketches of Georgian folk whose chief claim to fame is their extraordinarily corrupt, and all but unintelligible, English. It is possible that there are people who habitually talk this jargon, but that is no good reason for its preservation in literature. Constantly irritated and puzzled by the language, the reader is unable to appreciate what strength or humor or pathos may lie in the characters. They become one with the rude grotesqueness of the sounds they utter, travestying human nature as the sounds burlesque human speech.

THREE CRUISES OF THE *BLAKE*.

A Contribution to American Thalassography: Three Cruises of the U. S. Coast and Geodetic Survey Steamer *Blake* in the Gulf of Mexico, in the Caribbean Sea, and along the Atlantic Coast of the United States. By Alexander Agassiz. Boston: Houghton, Mifflin & Co. 1888. 2 vols., xxii., 214, and 220 pp. Royal 8vo. Maps and illustrations.

For instruction in Thalassography, or the knowledge of oceanic basins, the unprofessional reader has hitherto been obliged to seek his text-books in foreign literature. Of professional works, like that of Sigsbee on deep-sea sounding and dredging, and scientific papers, like those of Tanner, Verrill, and many others, in special lines of research, there is indeed a most creditable list of American titles. But for a parallel to Wyville Thomson's 'Depths of the Sea,' or Wild's 'Thalassa,' one would have hitherto searched our libraries in vain. To Mr. Alexander Agassiz we are indebted for the present work, which, in its scope, its wealth of illustration, and its presentation of fresh and important matter, leaves nothing to be desired.

The author explains, in his introduction, that his connection with the deep-sea work of the Coast Survey dates back to 1849, when, as a boy, he accompanied Prof. Louis Agassiz on a cruise off Nantucket, and served as an aid, two years later, during the investigation of the Florida reefs. When, in 1877, he was invited by Superintendent Patterson to pursue, under the auspices of the Survey, those studies with which he had been more or less occupied for a quarter of a century, the invitation was naturally accepted, with what important results all thalassographers are well aware.

The field of work opened to naturalists by such surveys is of the greatest importance. The materials collected throw a flood of light on our knowledge of the conditions of animal life in deep water, and promise the most important general conclusions on terrestrial physics and geology. Fascinating as the study of marine life has always been, even to amateurs, its interest has greatly increased since the abyssal fauna has been reached. Light has suddenly been thrown on many vexed problems concerning the geographical distribution of dry land in former geological epochs, in which is involved the distribution of plants and animals and their progressive development in geological time. New views of the nature of geological periods are suggested, and new theories of the formation and duration of continents and oceanic basins present themselves. Ideas in regard to the formation of marine deposits, formerly current, have been greatly modified, and many chapters of geologic history reconstructed on a more enduring foundation.

In the work done on the *Blake* during these cruises, while commanded by Lieut.-Com. Sigsbee and Commander Bartlett, as well as in the progressive development of the apparatus and methods employed, officers and civilians cordially joined forces, and the exact share of each in the success which followed, it would be impossible, as it is unnecessary, to delimit. The doubling of the trawl-runners and the substitution (suggested by Mr. Agassiz) of steel line for hempen rope, were improvements which have proved of the utmost importance in dredging, both in shortening the time needed for a haul and in insuring that the net shall not come up empty.

In the two volumes before us, Mr. Agassiz has brought together his observations on particular topics in separate chapters. In the first volume are collected a description of the equipment used on the *Blake;* an historical account of deep-sea work; a discussion of the Florida reefs and their relation to the peninsula and to the real boundaries of the continent; observations on the connection between the fauna and flora of the West Indies and those of the North American continent; on the permanence of continents and oceanic basins; on deep sea formations; general conclusions on the deep-sea fauna, with an account of the pelagic or surface fauna of the open sea; a discussion of the sea temperatures of the western Atlantic, the Caribbean Sea, and the Gulf of Mexico; a chapter, historic and descriptive, on the Gulf Stream, with maps illustrating the progress of our knowledge of this great thalassine artery from Franklin's time to the present day; on the origin and character of the materials being deposited on the bottom of the ocean; and on the physiology of life in the abysses. The second volume begins with a discussion of the fauna of the West Indies, which is followed by chapters devoted to characteristic deep-sea types of animals—fishes, crustacea, worms, mollusks, echinoderms, jelly-fish and hydroid corals, polyps and true corals, rhizopods and sponges; the whole concluded with a list of the 545 illustrations and an excellent index of twenty-six pages in extent.

For aid in the preparation of this wealth of material Mr. Agassiz acknowledges his indebtedness to such authorities in their special lines of research as Profs. J. D. Dana and S. I. Smith of Yale, Justin Winsor of Harvard, Sigsbee and Bartlett of the navy, John Murray of the *Challenger* expedition, Mr. Theodore Lyman and Mr. J. W. Fewkes of the Museum of Comparative Zoölogy, Prof. G. Brown Goode of the National Museum, the authorities of the United States Coast Survey, and some twenty naturalists, American and foreign, concerned with the scientific reports on the *Blake* collection. Among these is numbered the lamented Pourtalès, to whose memory the work is most appropriately dedicated. The illustrations are largely original, or drawn from previously printed special reports on the *Blake* collections, while those reproduced from other sources are, with one or two exceptions, unfamiliar to the reading public.

It is inexpedient within the limits of a review to traverse so much ground as is covered by these volumes. The names of the author and his colaborers are sufficient to attest the quality of the second volume, which treats almost exclusively of marine animal life. There are a few points in the first volume to which attention may be especially directed. These are, the conclusions of the author on the formation of coral reefs in general, and upon those of south Florida in particular; on the relations of the Gulf and Caribbean fauna to those of the Atlantic and Pacific respectively; and on the factors influencing the distribution of deep-water animals.

It was long since asserted by the elder Agassiz that the Florida reefs had a distinctive character, and could not be explained by the subsidence theory of Darwin. Of late, as most of our readers are aware, evidence has been accumulating which has fairly proved that Darwin's theory, excellent though it may be for those cases where subsidence has actually occurred, does not in many cases, perhaps even in a majority of cases, represent the real sequence of events which has resulted in the formation of barrier reefs and coral islands. Louis Agassiz, LeConte, E. B. Hunt, Alexander Agassiz, Semper, Murray, and Dr. Guppy, not to mention minor names, have, each in turn, contributed a share to the evidence and deductions which go to make up the revised theory of the present day. Leaving untouched the history of the subject, a statement of the manner in which Mr. Agassiz explains the building of south Florida will fairly indicate the nature of the new views. We may premise that, during the Eocene period, the fold of the earth's crust which forms the axis of the Floridian peninsula was gradually elevated above the sea, beginning northward and slowly extending southward, in the form of a double ridge with the same general trend as the present peninsula. The two ranges of hills forming this elevation were separated by a valley of considerable width, which, at a later time, was occupied by a series of large shallow fresh-water lakes, of which remnants still exist. The elevations still retain (in spite of the denudation which must have occurred) a maximum height of over two hundred feet, which gradually diminishes southward. Against the margins of these folds later limestones were laid down, and in their turn elevated slightly above the sea, with occasional periods of moderate depression, the most marked of which was in the quaternary period. These changes were so moderate and slow that the Floridian tertiaries show remarkably little disturbance, and indicate that eras of deposition, from the Eocene to the present time, were characterized by the same geological processes which, even now, may be observed in action.

According to Mr. Agassiz, a secondary result of this folding was the formation of an immense submarine plateau (represented by the present Florida bank) from the accumulation of the solid parts of mollusks, crustaceans, corals, worms, etc., which lived and died upon it. These furnished the limestone for the gradual completion of the peninsula. Their existence in immense numbers (as at present on the bank) was rendered possible only by the powerful current bringing incredible quantities of pelagic animals to serve as food. When the water became shallow enough for the reef corals, they sprang up along its path. There

is no evidence that the coral area of Florida and the reef owes its existence to the effect of elevation, or that the atolls of this district owe their peculiar structure to subsidence. The curve of the Florida Reef along the Gulf Stream is due, in great measure, as shown by Hunt, to the well-known westerly counter current. This, though ill-defined at Cape Florida, becomes stronger as it goes west, having at Key West a width of at least ten miles, and twice as much at the Tortugas. When storms occur, the fine silt, made up of coral and other pulverized organic matter from the reefs, is carried into the bay northwest of the Keys and deposited there, to be carried westward by the counter current and added to the flats. That this material has not been brought by the Gulf Stream from the mouth of the Mississippi is shown by the fact that no trace of Mississippi mud has ever been found in any of the innumerable soundings taken to the eastward of the Mississippi, or more than a hundred miles from its mouth.

The line of the Keys seems to be formed by the waste of the reef at present exterior to them, rather than by the remains of an older anterior reef. But it was shown by the elder Agassiz that the southern extreme of Florida is composed of concentric barrier reefs, which have been gradually cemented into a continuous sheet of land by the accumulation and consolidation of mud flats between them. This process is carried on, according to Mr. Alexander Agassiz, essentially as above described, but this area of reef-coral building does not reach northward of the Everglades. No trace of reef-building corals exists on the east coast north from Cape Florida. The long line of islands along this shore are of a totally different character, agreeing with those which now form the outer coast of New Jersey.

The discussion of the formation of atolls, such as the great Alacran Reef, we cannot follow in detail. Mr. Agassiz regards the structure of this interesting reef as a sort of epitome of the mode of formation of the great Florida Reef and of the Bahamas Bank, and says: "It seems to me that the structure of the Marquesas and of Alacran proves conclusively that not one point of difference exists between a barrier reef and an atoll" (p. 72). All the evidence tends to show that the maximum depth for reef-building corals is found at about twenty fathoms, and on the banks under discussion the shoaling which made reefs possible has been produced, not directly by the elevation of the earth's crust, but by the accumulation of organic débris upon the suitably situated elevations of the sea-bottom.

An important generalization of another sort is that made by Mr. Agassiz (p. 112), in which he points out that a relatively moderate elevation of the Floridian and Antillean plateaus in Tertiary times would have left the Caribbean Sea connected with the Atlantic by only four very narrow passages, while between the large islands which must at that time have represented Central America and northern South America, large openings led to the Pacific, so that practically the Caribbean would have formed a gulf of the Pacific. Coincidently, the Atlantic equatorial current would have been diverted northward, and followed either the course of the present Gulf Stream, or a direction across (the then non-existent) Florida, the Gulf of Mexico, and the (since elevated) Isthmus of Tehuantepec, and so into the Pacific. The conditions this hypothesis suggests fit in remarkably well with certain very puzzling facts of distribution in both recent and fossil faunas of the southern borderland of the United States.

The last matter to which we will refer as noteworthy is the very justifiable stress laid by Mr. Agassiz on the importance of the transportation of pelagic food by ocean currents, in controlling the geographical distribution of deep-water animals. This is one of the ideas which have long been, as it were, common property, but on which no one, so far as we remember, has hitherto put sufficient emphasis.

On one point we are disposed to "pick a crow," not especially with Mr. Agassiz, but with most hydrographers. It is on the preservation of the thalassologic superstitions in connection with the "hundred-fathom line," which here and in other works is regarded as the "true continental outline," the "edge of the continental plateau," etc. The hundred-fathom line was important, before the days of machine sounding, as the practical maximum limit of hand sounding, and hence of the length of the "dipsy line" carried by navigators. This and the peculiar "roundness" of the number have combined with tradition to give a hydrographic sacredness to the depth in question. In reality, as a glance at the sections figure 34, page 53, and any other sections of the continental slope, will show, there is nothing distinctive about this depth in connection with the continental margin, unless it is taken with a latitude of allowance which will divest it of any numerical significance. In general, somewhere between fifty fathoms and two hundred fathoms the seaward slope begins to be more abrupt, but not more often at the hundred-fathom mark than elsewhere, and often the slope is so even to a very great depth that no break can be distinguished in it at all. Of course, Mr. Agassiz knows this as well as anybody, but, like the practice of whistling to raise a breeze, the habit denounced by us is one of those which one absorbs unconsciously from nautical associations.

It is hardly necessary to say that the publishers have done their part well, and we have not noticed a typographical error in the course of a pretty careful perusal. The lettering of some of the Coast Survey diagrams would better have been enlarged before reduction, as, on the reduced plates, it has in some cases become difficult to make out. The specific name attached to the pelagic barnacle (fig. 182) should be *fascicularis* and not *anatifa*. The latter is a littoral species inhabiting the northern seas.

Initials and Pseudonyms. By William Cushing. Second Series. Thomas Y. Crowell & Co.

A GOOD example of devotion to one subject is given by Mr. William Cushing. Twenty years ago he ceased to be an assistant in Harvard College Library, and ever since then he has given closest application to that small but useful branch of bibliography which is concerned with the unveiling of the troublesome authors who try, or pretend to try, to conceal their names from an inquisitive public. Not that Mr. Cushing imitates the modern reporter, and thrusts himself shamelessly into privacy; he is content, so far as we know, to record only what others have discovered, or what he has honorably found out. His service to the public is that he records it in a convenient form, and with an attempt not to tell too many facts which are not so. It is true, success in this has not been always at his command. The number of corrections already made in the first series of 'Initials and Pseudonyms' would run up into the hundreds. Of this one should not complain; it is almost inevitable in a work so dependent upon the accuracy and the chirography of others. But it is strange that Mr. Cushing has not printed in the second series a few pages of errata to the first. We wish, too, that he could have found room to give the authority or authorities on which he makes his revelations. There is often a doubt in regard to such attributions; one would like to know whether he is simply repeating what one has found elsewhere, or if he has some new evidence. Especially is this desirable when the author himself discloses his real name.

The work is generally well planned. But there is a lack of uniformity in the entry of initialisms, as Quérard calls them. For example, one finds M., M., and M., M. I. (in which the last initial used on the title-page is put first), followed by M. N., in which the order has not been reversed. Menella Bute Smedley used the initialism M. S. in three works. One of them is entered under M. S., and the two others under S., M. Thomas Curteis, Thomas Chamberlain, and Thomas Crowley's initialism T. C. is recorded under C.; but William Maginn's and Carlotta C. af Tibell's are under T. Similar inconsistencies are to be found under every letter of the alphabet except U, X, and Z. This is a very serious fault, for, as there is not a word of explanation, it will certainly lead searchers frequently to miss information which is in the work, but not where they will look for it. As names are transposed (*e. g.*, Dannenberg, Georg von), initialisms ought to have been.

The book calls itself "a dictionary of literary disguises," but there are also some entries that belong rather in Mr. Frey's book of 'Sobriquets and Nicknames.' On one page we find "Rafaelle of Auctioneers, The. *George Leigh.* So-called by Dr. Dibdin," and "Rail-Splitter. *Abraham Lincoln*," which certainly are not literary disguises. Per contra, in one important respect the work is much superior to ordinary books of its kind. In Weller's 'Index Pseudonymorum,' the real name is given after the false one, but without any indication, except a single date, in what works the pseudonym is used. Fifty people may use the same disguise, so that Weller's work is, as he calls it, simply an Index, which points out the path, but does not lead one to the goal, merely sets one on the track, and leaves one to investigate for one's self. But the present work in a second part gives a very brief biographical sketch of the true authors, with either a list of their works, or sufficient indications of the character of their writings to enable one to guess whether the pseudonym that one is looking up is used by the author mentioned. When the pseudonym occurs only in one work, the title is given in the first part, and there is no need to refer to part ii. In short, the book, which discloses 4,800 real names that answer to 6,500 pseudonyms and initials, is very useful—indispensable, in fact—in a library of any size.

We are sorry to learn that the subscription to Mr. Cushing's 'Anonyms' has not been taken up to a degree sufficient to warrant publication, and that it will be necessary to issue that work at a higher price to a more limited number of subscribers. It is now proposed that it shall come out in four or five parts of 200 pages each, like Sabin's 'Bibliotheca Americana,' in paper, at $5 a part. Certainly, $20 or $25 is not too much to pay for 25,000 titles of anonymous books and pamphlets, with their authors' names. But it is not to the credit of American library committees that so many of them hesitated to take the work when it was offered at the lower price. It is to be hoped that those who were wiser will find themselves able to promise their assistance on the present terms, for it would be a great pity if the work of a score of years should after all have to go into the waste-basket.

Handbook of Republican Institutions in the United States of America, based upon Federal and State laws, and other reliable sources of information. By Dugald J. Bannatyne. Scribner & Welford. [1887.] Pp. xx, 624.

THE great desideratum for the study of the politics and history of the United States is a brief, lucid, systematic account of the form of the Government. It should contain a description of the State and national governments; there should be sketches of the growth of important institutions; and the description of each part of the system should be rounded off with intelligent comment and criticism; finally, it should be written for popular use. At first sight Mr. Bannatyne seems to have filled the vacant place on the library shelf. The clear type, systematic table of contents, and neatly arranged columns suggest precision of thought. He announces his purpose to "spread before his countrymen" in Great Britain "a banquet of Republican Institutions." With all respect for the author's candor and good-will, it cannot be said that he has made the banquet alluring to any reader.

The introduction contains a rambling account of the social condition of the United States, and the confusion of the narrative may be seen from the subjects touched upon in three consecutive pages; they are: Primary elections, the wickedness of human nature, the object of laws, religious freedom, religious denominations, the number of oaths and affidavits required, population, illiteracy, prisons, the unreliability of newspapers, defalcations, bribes and crimes—ending with "*Unum e pluribus* is the American motto." The basis of Mr. Bannatyne's information in many cases seems to be newspaper comment; his own criticism is commonplace and superficial. The second part of the work is an account of the United States Government. A comparison with the Revised Statutes of 1878 shows that it has been composed by the simple process of extracting titles and paragraphs, omitting here, interjecting a later statute or appropriation there, and occasionally altering the order—all on no discernible principle. The third part, on the Government of the State of New York, is made up in the same way. Mr. Bannatyne frankly announces that he intends to adopt the "words of the statutes as much as possible." But no lawyer would use a book compiled on that principle, without quotation marks or references or an index; and no general reader is likely to care for extracts without comment and often without point.

The Story of the Goths, from the earliest times to the end of the Gothic dominion in Spain. By Henry Bradley. [The Story of the Nations.] G. P. Putnam's Sons. 1886.

MR. BRADLEY has made a useful addition to the series of which his volume forms a part. As "the first English book expressly treating of the history of the Goths," it deserves especial recognition. It is not, however, as if the materials were scanty or inaccessible. They are so complete, and so well digested in the works of Gibbon, Dahn, Hodgkin, and others, that Mr. Bradley's task has not been that of a pioneer. Of these abundant materials he has made good use, and has produced a book of great merit, written in a sober, well-sustained style, and showing the marks of careful industry and discretion. The illustrations are hardly equal to those of most of the volumes of this series; the views of Ravenna and the numerous coins are, however, all that could be wished. The map, for the year 485 (the death of Euric), is very serviceable, especially as we do not remember any map of Europe at just this date, and the territorial changes in that period were so numerous and rapid that such special maps, even if scattered through different books, are much to be desired. The text hardly does justice to the importance of Euric's reign in the history of the Gothic power.

BOOKS OF THE WEEK.

Barres, Maurice. Sous l'œil des barbares. Paris: A. Lemerre; Boston: Schoenhof.

AGATHA PAGE.

A Novel. By ISAAC HENDERSON. (Author of 'The Prelate.')

WITH FRONTISPIECE BY FELIX MOSCHELES.

Louise Chandler Moulton writes in the Boston *Herald:* "Mr. Henderson has become one of those whose books must be read—one of the few, not the many. . . . It is not a story to be calmly read or tamely praised."

"This story will take hold of the novel-reading public in a way that nothing has done before for years. It is the 'Elective Affinities' of this age; a story strong, intensely dramatic, full of the deeper significances of life, and told with wonderful vividness and brilliancy."—*Boston Traveller.*

"There is a finish and coherency in the tale throughout that will delight the cultivated reader."—*Boston Gazette.*

"The whole book is a strong piece of work."—*Boston Transcript.*

"Is an auspicious first among the summer novels about to appear—first not only in time, but also in solid merit and as a literary work of art."—*Boston Beacon.*

"The lover of thoroughly good literature will recognize in 'Agatha Page' work of the quality which survives. . . . Its purpose is evidently born of no mood, but of settled and well-established conviction, and its style seems born less of any momentary inspiration than of the scholarly habit of fitting phrase to thought."—*Boston Advertiser.*

"The one perfect creation is 'Agatha Page' herself. . . . She alone, for her worth and exalted influence, were enough to reward the most ambitious literary artist, but all her company share in many of her excellences."—*Boston Globe.*

"The heroine is a most beautiful and perfect creation. The delineation of her character is not only artistic, but it appeals to the highest conception of ideal womanhood, and to the strongest, mildest, bravest, tenderest nature. She is a creature of such perfect individuality, such strength of character, and beauty of soul, such a living personality of the possibilities of noblest womanhood, such an actuality of a life in almost ideal perfection, that her creation must attain importance in American fiction, if not accepted as a prophecy of its possibilities."—*Chicago Current.*

"The character of Agatha Page is a singularly attractive combination of womanly strength and sweetness, and indeed all the characters are sharply and confidently individualized."—*Chicago Times.*

"If all women who have cause to be jealous would read and profit by such lessons as the one contained in this admirable novel, there would be fewer divided lives."—*Chicago Journal.*

". . . Will be found one of the most engaging publications of the year."—*Cleveland Leader.*

"The lovers of romance may treat themselves to a genuine sensation in a new novel just out from the press of Ticknor & Co. entitled 'Agatha Page.'"—*Chicago Inter-Ocean.*

"No novel of the season has more of finished writing than 'Agatha Page.'"—*Cincinnati Commercial Gazette.*

"Of high rank among modern fiction."—*San Francisco Chronicle.*

"It is really a most remarkable piece of work, the characters being clear cut, the incidents fresh, and the manner of the author superb throughout."—*Quebec Chronicle.*

"If any one wishes to note the thoroughness, the skill, and the admirable taste with which our younger writers of fiction are now using their materials, he cannot do better than read Mr. Isaac Henderson's new story, 'Agatha Page.'"—*New York Christian Union.*

"Charming, both as a story and as a revelation of the deep and true things of human life."—*Hartford Courant.*

"Many more men than we care to enumerate will feel in their plain American or plain English conscience an odd sensation of self-judgment as they study the heart-problem of the Marquis Filippo Loreno."—*Philadelphia Book News.*

Published by TICKNOR & CO., Boston.

FOR SALE BY ALL BOOKSELLERS.

MACMILLAN & CO.'S NEW BOOKS.

THE COMPLETE WORKS OF ROBERT BROWNING. THE POETICAL WORKS OF

ROBERT BROWNING,

New and Uniform Edition. To be Completed in Sixteen Volumes. Issued Monthly. Globe 8vo, each, $1.50.

The Edition will contain more than one portrait of Mr. Browning, at different periods, and a few illustrations.

Vol. 1. Pauline; Sordello. *Ready.* Vol. 2. Paracelsus; Strafford. *Ready.* Vol. 3. Pippa Passes; King Victor and King Charles; The Return of the Druses; and A Soul's Tragedy. *July.*

A New Book by Mr. Henry James.

PARTIAL PORTRAITS.

By Henry James. Globe 8vo, $1.75. CONTENTS:

Emerson.	Miss Woolson.	Robert Louis Stevenson.
George Eliot.	Alphonse Daudet.	George du Maurier.
Daniel Deronda.	Guy de Maupassant.	The Art of Fiction.
Anthony Trollope.	Ivan Turgeneff.	

"Mr. James has the critical mind, and with it the temperament, which alone can direct it, and he has, besides, the rare and glorious gifts which are necessary for its equipment. He has the ripe and varied culture without which no man can be a writer. . . . Mr. James is at his best in these papers, and, for his American readers, at his very best in his studies of Daudet, De Maupassant, and Turgeneff."—*Mail and Express.*

"It must suffice to say that there are few pages of this new book of his that do not contain something good, and that the effect of transitoriness, great as it is, is equalled, if not surpassed, by the effect of careful and amazing cleverness."—*London Athenæum.*

New Edition of Lord Tennyson's Works.

THE WORKS OF LORD TENNYSON. Library Edition. A New and Complete Edition in Eight Volumes. Globe 8vo, each $1.50.

POEMS. Vol 1. *Ready.*	ENOCH ARDEN; and IN MEMORIAM. *Ready.*
POEMS. Vol 2. *Ready.*	BALLADS; and other POEMS. *June.*
IDYLLS OF THE KING. *Ready.*	QUEEN MARY; and HAROLD. *July.*
THE PRINCESS; and MAUD. *Ready.*	BECKET; and other PLAYS. *August.*

THE MISCELLANEOUS WORKS OF R. W. CHURCH, Dean of St. Paul's. In Five Volumes. Globe 8vo, each, $1.50.

Vol. 2. DANTE, and other Essays.	Vol. 5. BACON. *July.*
Vol. 3. ST. ANSELM.	

"Learning, earnest thought, discriminating judgment, and a cultivated power of expression give these essays a substantial value, which shows to more advantage in their present form than in the pages of old magazines."—*Scotsman.*

By Walter Pater.

THE RENAISSANCE: Studies in Art and Poetry. By Walter Pater, Fellow of Brasenose College. Third edition, revised and enlarged. Globe 8vo, $2.

"Among English authors who have identified themselves with the modern art movement in England, no one holds a higher position than Mr. Walter Pater. A thorough scholar, a man of strong artistic feeling, trained in literature as well as in art history, Mr. Pater has brought to the work of expressing some modern English ideas in art all the resources of a gifted and accomplished writer. In this delightful volume on the Renaissance he discloses many of those qualities which characterize what has been called modern pre-Raphaelite art."—*Christian Union.*

IMAGINARY PORTRAITS. By the same author. Globe 8vo, $1.50.

"His command of the qualities of grace and beauty in English prose seems to us seldom to have been equalled. . . . We do not know of another fiction-writer of to-day—certainly not more than one—who would do such purely artistic work in the line of drawing characters of a bygone day."—*Critic.*

"Mr. Walter Pater is one of the few—the very few—living English authors who have never published anything which the most fastidious lover of pure literature cannot read with pleasure as well as profit, and to which he is not certain to return in his leisure hours for a renewal of that pleasure."—*Mail and Express.*

ESSAYS CHIEFLY ON POETRY. By Aubrey De Vere, LL.D. 2 vols. globe 8vo, $4.

"Altogether there is a body of criticism here the ripened result of a full mind such as comes only from the reflection of a lifetime. It bears unmistakable evidences of great refinement of taste, of much thoughtful care, of wide familiarity with literature; and there is throughout a rare feeling for what is pure and wise and noble in the imaginative work of the great poets, and what is serviceable for the spiritual life under whatever creeds or masters it may be led, and its spirit is as enlightened as it is liberal."—*Atlantic Monthly.*

A TRIP TO ENGLAND. By Goldwin Smith. 8vo, paper, 40 cents.

Macmillan's Summer Reading Library.

In Paper Covers, each 50 Cents. Volumes already Published:

MARZIO'S CRUCIFIX. F. Marion Crawford.	*CHRIS.* W. E. Norris.

The Nation.

NEW YORK, THURSDAY, JUNE 14, 1888.

The Week.

THE debate on the section of the Mills bill relating to salt was so overwhelmingly strong on the side of the supporters of the bill that the subject was disposed of at a single sitting. The discussion was opened by Mr. Cox of New York in his usual epigrammatic and incisive style. He showed that the present tariff discriminates against the dairyman and in favor of the meat-packer and the fish-packer, by giving the latter a drawback on the salt used by them, while the butter-maker was not allowed the same privilege. Mr. Burrows of Michigan, remembering, perhaps, that he had himself voted in the Forty-second Congress in favor of free salt, prudently abstained, in his reply to Mr. Cox, from following the customary rôle of his side of the House, and saying the admission of salt free of duty would ruin the salt industry of the United States, and throw all the laborers out of employment, and destroy untold millions of capital. So he took the ground that it was wrong to surrender any portion of our market to foreign salt. He had stated, however, in the beginning of his speech that one-third of the salt used in the United States was foreign. In other words, the existing duty on salt, fixed by a Republican Congress, of which Mr. Burrows himself was a member, for which he had himself voted after having voted in favor of no duty at all, was wrong, because it did and does permit the importation of salt to the extent of one-third of the country's present requirements. Mr. Burrows concluded his speech by saying that Michigan could do well enough without the salt tax, because she had the Northwestern markets at her command, in which foreign salt could not compete by reason of the freight charges. But he was so much concerned for the Syracuse salt-boilers that he could not vote for the bill. Moreover, he wanted to "stimulate" the salt industry in Louisiana and Texas and all along the Southern coast.

His colleague, Mr. Whiting of Michigan, made the most effective speech in favor of free salt. He said that he was himself a salt manufacturer, and that he was not afraid of foreign competition. He confirmed all that Mr. Cox had said concerning the necessity of having foreign salt for dairy purposes, on account of its peculiar chemical properties. He confirmed Mr. Cox on the point that there was an unjust discrimination at present against dairymen, and in favor of meat and fish packers (this point having been denied by Mr. Belden of New York). Mr. Whiting said further that he was selling Michigan salt at the present time all along the Atlantic seaboard, and that he could "compete with English salt anywhere in America and make a profit." This statement threw the Republican side of the House in a terrible flutter, which Mr. Tarsney of Michigan, the immediate representative of the Saginaw district, increased by producing the *Congressional Globe* of the Forty-second Congress, and showing how Burrows himself, together with Mr. Reed of Maine, Mr. Frank Hiscock of Syracuse, N. Y., Mr. Hoar and a majority of all the Republicans in the House, had voted for Eugene Hale's free-salt bill in 1871. Mr. Cox added that the bill was put through under the inspiration of Speaker Blaine. The independence of the country was lost by a vote of 86 to 46, and salt was put on the free list.

The Republican plan of campaign for the pending contest is openly confessed to be what is known in political parlance as "working the free-trade racket." To every argument in favor of the Democratic ticket and platform, the one answer is to be a loud cry of "Free trade!" There are two difficulties in the way of carrying out this policy. The first is that it "insults the intelligence" of the people, as Mr. Depew, when running on the Democratic ticket in this State a few years ago, said of the companion dodge, which used to be known as "working the rebel-debt racket," when Mr. Blaine was exploiting it on the Republican stump. In other words, the Republican programme in 1888 is based upon the assumption that the American people are a pack of fools. The other Republican difficulty is hardly less serious. The Democrats in 1888 are only attempting to do in this matter of tariff revision exactly the same thing which the Republicans declared to be just and right a few years ago.

The manufacturers of the silly slanders about President Cleveland and his family made the great mistake which nearly all compounders of "campaign stories" are guilty of —putting it too strongly. It was bad policy to make the President's conduct in his home so very outrageous, and Mrs. Cleveland so frightfully unhappy, because this led to instant arrest and conviction, while they might, by merely hinting and winking and pretending to know more than they were willing to tell, have gone on for two or three months without being caught or brought to book. It is melancholy to see that, as four years ago, the leader in this dirty and shameful business was a minister. It was a Reverend C. H. Pendleton, a Baptist minister of Worcester, Mass., who brought back from a ministerial visit to Washington the disgusting fables about the President's "orgies" at the White House, and his brutality to his wife. Since Mrs. Cleveland's crushing letter, Mr. Pendleton says he is sorry, that he did not say all the reporter made him say, and got a promise from the reporter not to print what he did say, and offers, with a whine, to apologize and vote for Cleveland this year by way of expiation. But he cannot mend matters in this way. He would aggravate his offence by offering Mr. Cleveland his vote. The best atonement he can make is to vote for Blaine, or "Tom" Platt, or somebody of that sort.

The confessions of the Rev. Pendleton recall vividly the way in which the managers of the Blaine canvass in 1884 tried to use the ministers of various denominations as a means of propagating their filthy slanders about Mr. Cleveland in that year. They actually got up a "clerical bureau," manned by an unattached minister, whose special duty it was to spread accounts of Cleveland's immorality and Blaine's purity and piety in a quiet way through the religious circles of the whole country. In the present case they resorted to somewhat the same device. When the Baptist Conference met in Washington, the newly constructed stories about the President and his wife were quietly spread among the ministers, so that when they passed the White House they should think of the dreadful doings within and shudder, and, when they went home, should spread the news through their congregations, as things too shameful to publish, but desirable for every Christian voter to know. How far this poison would have spread, or how much mischief it would have wrought if an unscrupulous reporter had not enticed Mr. Pendleton into talkativeness, it is, of course, impossible to say. By the way, why are some ministers so much more credulous with regard to the vices of drunkenness and licentiousness, than with regard to lying, cheating, and corruption? It is the easiest thing possible to make a lodgment in their minds for a charge that an outwardly respectable man drinks too much wine and is unfaithful to his wife, but they are exceedingly loath to believe that he made his money dishonestly, that his donations to colleges and churches come out of the pockets of victims, or that he takes fees for his vote in Congress. And yet the one, as the world goes, is just as probable as the other.

"A Civil-Service Reformer" writes to the *Times*, calling attention to a significant contrast between the St. Louis Convention and that of the Republicans four years ago:

"Four years ago the Chicago gathering was the convention by the party in power. According to the official organ of the Republican party in this city, there were present at the Chicago Convention 'considerably over 100 delegates who are [were] Federal officials, and there is [was] a much larger number of officials here [there] who are [were] not delegates.' Among the 'over 250 Federal office-holders' present were the Collector of the Port of New York, the First Assistant Postmaster-General, the United States District Attorney for the Troy district, the Collector for the Port of Buffalo, the Register of the Treasury, and the Commissioner of Internal Revenue. The First Assistant Postmaster-General was the avowed leader of the forces seeking a renomination of the President. Now compare this with the St. Louis Convention, which is the Administration convention this year, and what do we see? From the most reliable newspaper accounts there are at the outside only a few Federal officials in attendance, and among them not a single one of the im-

portance of the officials mentioned above. I do not know a single Federal office-holder from this city who is there."

This is all true so far as Federal officials are concerned. In that respect the present Convention is a great advance upon any which has been held by a party in power for many years. Four years ago the Collector of the port of New York was a Republican delegate, and was one of the recognized leaders of the Blaine boom. Now the Collector of the port is attending to the duties of his office, and, so far as we have been able to learn, all his assistants, except Deputy-Collector Davis, are doing the same. We wish that the same thing could be said of State and city officials, but it cannot. There is a shamefully large number of them from this State present at St. Louis, but of course the President has no control over them. The absence of Federal officials is, however, a gain which can scarcely be overestimated. For the first time in many years, it can be truthfully said that the custom-houses of the land are taking no part in the nomination of a President. When we consider that the last Republican Collector of New York received his appointment as a reward for service rendered in a national Convention, and went to the following national Convention as a delegate and worker for the man who secured him his reward, in spite of the fact that the giving of the reward split the party in twain and brought on a quarrel which incited a lunatic to shoot the President, we begin to realize what progress civil-service reform has made.

Mr. Collins's speech as Chairman of the Convention at St. Louis was much above the level of such efforts. It was measured and dignified in tone, and free from extravagance of every description. He indulged but slenderly in the old, time-honored "arraignment" of the enemy, and made a more impressive deliverance of the Democratic gospel than the party has listened to since the old days before slavery began to bewilder the disciples. We wish we could say as much for the blast with which the redoubtable Mr. Dougherty renominated Mr. Cleveland. The noise of it was tremendous, but the sense of it only scanty. It is well that it made no difference by whom the nomination was made, or how it was made. Some Tammany man had to do the work, and Mr. Dougherty now carries the Tammany trombone, and, "Gad, sir," as we once heard a colored man remark of a player of that instrument, "how he makes that thing talk." It was Mr. Dougherty who treated the last meeting of the State Bar Association to a "paper" on the awful license of the press, about which he displayed great gloom for a man of naturally buoyant temperament. Mr. Bourke Cockran, who is the Tammany tuba, would have done the work better. His gift of speech is as good as Mr. Dougherty's and he is thought on the whole less nebulous.

The Democratic Convention of 1884 declared that "we favor honest civil-service reform." The Democratic Convention of 1888 "reaffirms the platform adopted by its representatives in the Convention of 1884," and with reference to this particular subject says: "Honest reform in the civil service has been inaugurated and maintained by President Cleveland, and he has brought the public service to the highest standard of efficiency, not only by rule and precept, but by the example of his own untiring and unselfish administration of public affairs." It will thus be seen that the party occupies precisely the same position on this subject now as four years ago. Then it grudgingly declared in favor of "honest civil-service reform"; now it reaffirms that declaration, and endorses in the same grudging way the inauguration and maintenance of "honest civil-service reform" by the President.

As the time for the Chicago Convention draws near, it becomes apparent that Mr. Sherman will lead all competitors on the first ballot. His friends claim 340 delegates to start with, 411 being a majority. It is not unlikely that he will have upwards of 300. This will constitute a very powerful attracting body, especially since Mr. Sherman has managed his boom this time in such a way as not to give any just cause of offence to any other candidate. The formidableness of his strength is attested unmistakably by the alarm which it creates among the Blaine-or-Bust faction, who have partly recovered from the dejection into which they were thrown by the last letter of their chief saying that "since he could not accept the nomination now without seeming to be guilty of indirection, he could not accept it at all." These refined casuists are now saying to each other that Mr. Blaine could still accept the nomination if it should come to him without any suspicion of indirection on his part. They have not given up the idea that the Convention may get into a tangle and a deadlock, from which nothing but the name of Blaine can extricate it. This is the reason why they are so disturbed by the growing proportions of the Sherman boom, for if any candidate can muster 300 votes on the first ballot, the chances of a permanent deadlock are very faint. What would best suit the Blaine-or-Busters would be about 100 votes each for Sherman, Gresham, Harrison, Alger, Depew, Hawley, Ingalls; and the rest scattering, but mostly for Blaine. Three hundred votes for any one other than Blaine is a bad showing for them, because the attraction of gravitation is sometimes as strong as that of magnetism.

The Republicans are in danger of overdoing the Oregon business. The average organ is disposed to treat the result in that State as settling the Presidential election. Experience has shown that preliminary State elections in Presidential years are most untrustworthy guides. Two illustrations will suffice to show this. In September, 1876, the Republicans swept Maine as they have just swept Oregon, and Mr. Blaine telegraphed Gov. Hayes an exultant message. Two months later the nation voted for President, and the Democratic candidate carried New York by 32,742 votes, New Jersey by 12,445, Indiana by 5,515, and Connecticut by 2,900. On the other hand, in September, 1880, the Republicans were badly beaten in Maine, losing the Governorship and two of the Congressional districts. The Democrats all over the land jumped to the conclusion that they were going to carry the country. But in November the Republican candidate for President carried New York by 21,033 votes, Indiana by 6,642, and Connecticut by 2,656.

The nomination of a Chief Justice was sent to the Senate on the 30th of April. It is now the 14th of June, and action upon it is still deferred. Deliberation in the case of an office of such importance is quite justifiable, and nobody can blame a Senate committee for taking ample time for investigation and consideration, especially in the case of a nominee previously unknown to the country. But it certainly seems as though a month and a half were sufficient time to enable a committee to make up their minds whether they should recommend the confirmation of a nomination. Mr. Waite was scarcely better known at the time of his nomination than Mr. Fuller, yet the Senate acted upon his case within a week. The "advice and consent of the Senate" are required to make a nomination of the President effective, but it is obvious that the framers of the Constitution expected the Senate either to give or to refuse its consent, and never contemplated the idea of its declining to take any action at all. All this is, of course, entirely aside from the question of Mr. Fuller's fitness for the Chief Justiceship. If he is not qualified for the place, his nomination ought not to be confirmed, but it ought to be rejected outright, so that the President may offer another name and the vacancy be filled before the fall term of the court opens.

It is not worth while to spend time refuting Gov. Hill's reasons for vetoing the Ballot-Reform Bill. Nobody believes for a moment that these reasons furnish the true cause for his action. He has vetoed the bill because it was in the interest of honest and fair elections, free from the taint of bribery and political machine manipulation. He pretends that under the provisions of the bill it would not be so easy as it is now for voters to exercise their individual preferences, or for candidates to get their names upon the ballots. As a matter of fact, it would be in every way easier. It is impossible now for any candidate except those of the regular machines to get his tickets distributed at the polls, unless he spends anywhere from $1,000 to $100,000, according to the importance of the office. The new law furnished safely guarded methods for him to get his name on the ballots, and even if he did not get it there, his friends who should desire to vote for him were given the privilege of writing his name in a blank space which was provided on the ballots for

that purpose. If the Governor had not been able to find the reasons which he has given, he would have been equal to the emergency of finding others upon which to base a veto. We trust that the State is nearing the end of its experience with this cheap political trickster.

The *Tribune* had an article the other day entitled "The *Bridgewater* Case," representing that an American ship of this name sailing for Liverpool and encountering a storm put into the Canadian port of Shelburne for repairs, where she discharged her cargo, and where her owner, Mr. Allen, finally concluded to sell her. The ship was sold at auction, but, the offers not being satisfactory, she was bid in for his own account. Whether the latter fact was known to the Canadian customs authorities at the time or not does not appear, but it was forthwith made known to them by Allen. They then required him to deposit the amount of the duty payable on imported ships *pro forma*, make his repairs, and receive the money as a drawback when he should depart. This he refused to do, but appealed to the Ottawa Government, and procured from the latter a release from the payment of duties and the right to repair his ship and leave the port. The owner now claims $25,000 damages for unlawful detention, and is supposed to have filed a claim for that sum with the State Department. The *Tribune* feels quite sure that Secretary Bayard will prove as pusillanimous and cringing as is his wont when he takes up the case, although there was no evidence that it had reached him at all at the time the article was written.

The case certainly presents one novel point. The right to enter a foreign port for repairs is one of the common rights of humanity recognized by the laws of all civilized nations. The right to sell a ship in a foreign port is subject to the laws of the country. It may be prohibited altogether, or it may subject the ship to the payment of duties, or it may be permitted freely. Under our laws such a sale could not be made with a view to making it an American ship unless the repairs amounted to three-fourths of her total value. It could be made, however, to anybody who wanted to sail her under a foreign flag, but she would not be allowed to engage in the coastwise trade. The point of interest in the *Bridgewater* case, if there is any such point, is whether the Canadian customs authorities, when they learned that Allen was the purchaser of his own ship at the auction sale, were justified in requiring him to deposit the amount of the duties as security that he intended to take her home or to proceed on his voyage after his repairs were made. The action of the Ottawa Government would seem to imply that they had no right to do so. But it is plain that the difficulty has not arisen from any denial of the rights of hospitality, but from the fact that a public sale was made in a Canadian port of an article which was *prima-facie* liable to duty. We think that Secretary Bayard will get through it somehow, but of course the opportunity to twist the British lion's tail ought not to be overlooked.

The Rev. James Freeman Clarke, who died on Friday in Boston, at the ripe age of seventy-eight, was one of the last of a generation of Unitarian ministers who have no successors, and whose prominence and influence in Boston society gave it for half a century a flavor of its own which is now almost extinct. He came on the scene just as Emerson was leaving the ministry, and, like all his contemporaries in the Unitarian denomination, caught enough of the Emersonian philosophy to make his theology a considerable, and in fact almost fatal, departure from what the older men, who began the secession, considered sound doctrine. He was what used to be called in those days a "scholarly man," rather than what is now called a scholar—that is, he was widely read rather than profoundly learned in any one field. His gentleness, sweetness of temper, great powers of sympathy, and endless patience in kindness would have made him a strong influence always, even if his absolute integrity of purpose had not made him in his best days a real force. He was an outspoken anti-slavery man in the darkest hour of the cause, and never ceased to take a strong and active interest in politics, and always on the moral side, with an indifference to political consequences which the constituents who sent him to conventions not only pardoned, but admired. He wrote a great deal on matters pertaining to religion, but all his books were rather edifying than critical, for he, as we have said, came before the days of insatiable research and collation. But he was before all things a good man, who was the guide, philosopher, and untiring friend of two generations, and his activity in well doing lasted so long that he will be mourned as few men are mourned who had so nearly reached four-score years.

The *Tribune* had two columns on Sunday giving a sad account of the condition of the working classes in Holland. It summed it all up in this way editorially:

> "The letter printed this morning describing how the average workingman of Holland lives, deserves to be studied and pondered by students of our industrial conditions and labor problems. The average wages of the Dutch laborer are $3 a week (he works twelve hours a day), and for 'skilled labor of a very high class' not more than $4.50 to $5 is paid—scarcely more than carpenters and bricklayers receive here for a day's work. Not one day-laborer in Amsterdam owns his own home, and the idea that skilled workmen in this country may earn enough to buy houses for their families is incredible to artisans of the same class in Holland. Holland enjoys the blessings of free trade. Do American workingmen hanker after blessings of this sort?"

Now, Mr. Chauncey Depew described the state of things in Holland in 1884 as follows in the *Tribune* of February 26 of this year, and the *Tribune* heartily endorsed him the same day: "Four years ago, when I went abroad, I went to Holland. When I was over there, I found that there *was more content and happiness in Holland than in any country in Europe. There was absolutely no pauperism.*" At that time Holland had been for full fifty years in the enjoyment of almost absolute free trade, such free trade as has never been witnessed in any other country, and as does not exist even in England to-day. It is true that Holland is still in the enjoyment of the same free trade; but if free trade worked so well down to 1884, how are we to account for the ruin it has wrought, according to the *Tribune*, within, say, the last two years? We know of only one way of accounting for it, but to this we are far too polite to resort. We must leave it to the imagination of our readers.

The warning which the London *Economist* recently gave against accepting the official statistics of the commerce of the Argentine Republic as entirely accurate is strikingly confirmed by Dr. Latzina, the Chief of the Argentine Bureau of Statistics. The *Economist* surmised that the great increase in the foreign commerce of the republic, as reported for 1887, was partly due to exaggerated estimates of the value of both imports and exports, in consequence of a depreciated currency and business inflation. But Dr. Latzina goes much further, in his returns for 1886, and admits that the values assigned to the articles of Argentine foreign trade are to a considerable extent "fictitious." He arrives at this conclusion partly from a review of the official figures for the past twenty-six years, according to which the balance of trade against the republic would be no less than 210 millions. As he sensibly remarks, this is incredible on its face. He shows, too, that the surprising falling off in the exports of 1886 as compared with the preceding year was attributable in large part to arbitrary changes in valuation, not to really smaller quantities of exports. An error on the other side may very well account, then, for the large reported increase of 1887. All this is a fresh reminder of the distance we have yet to travel before arriving at a science of universal statistics. It may be that the South American States are not sinners above all the rest of the world in putting forth untrustworthy statistics, but at any rate there are many particularly provoking things in their practice. They sin in good company in adopting awkwardly varying fiscal years; but in their confused system of public accounts, the books often being two or three years behindhand, in their frequent resort to estimates in the absence of exact returns, and in their arbitrary ways of valuation of imports and exports, they have an easy preëminence. Hence it comes about that the contradictions between their official reports and those of England or the United States in the points where the two cover the same ground, or ought to, are so blank and inexplicable. It is to be said, however, that they are conscious of their shortcomings, that they acknowledge them, and are making commendable efforts at reform. We have had especial occasion to notice the great improvement of recent official publications of Mexico in this regard; and if the earnest endeavors of Dr. Latzina are not entirely unsuccessful, he will speedily bring the Argentine statistics into far better shape than they ever have been.

THE ST. LOUIS CONVENTION.

THE renomination of President Cleveland by the National Convention of his party has been so much expected, and so little doubtful at any time, that criticism and comment are for the most part superfluous. It is usually the case, when there is no contest over the first place on the ticket, that the competition for the second place excites great interest; but the preëminent merits of Mr. Thurman as a statesman and a citizen have far overshadowed all others that here also the interest of the public, who always like a close race, measurably abated. In fact, the great struggle at St. Louis has been over the platform, and over a single one of its component parts. This struggle began when the President's message was delivered, and it has culminated in an endorsement of the principles of the message. The result could hardly have been otherwise, because if Mr. Cleveland were to be renominated, he must be taken as he is. To have taken him in any other way would have made the Democratic party the laughing-stock for gods and men. The party would in such case have been beaten without the honor of a fight.

The platform endorses the principles of the President's message and the efforts of the Democratic representatives in Congress to secure an adequate reduction of taxation and to reduce the surplus in the Treasury. This is a brave and manly stand. It is in no sense a "straddle" or a deception. The message has been before the people long enough for everybody to understand it. It describes a situation of the national finances which everybody acknowledges to be full of peril. It calls for a reduction of tariff taxation in the interest of the great mass of the people, in order that they may obtain the necessaries of life and the materials of industry at lower rates, and at the same time avoid the impending evil of a lock-up of the people's money in the Treasury. Nothing could be plainer or less liable to misconception. By endorsing the message, therefore, the Democratic party has at all events challenged the respect of enemies as well as friends, and, whatever the outcome may be, it has created a live issue, and one which will not cease to dominate American politics until it is settled on principles fair and just to all. Never since the days of feudal tyranny and monopoly has there been a system so cunningly devised to widen the gap between different classes of society, and to fertilize the rich man's domain with the sweat of the poor man's brow, as the present tariff of the United States—a system denounced as unjust by scores of the most eminent Republican statesmen now living, who will now neither do anything to right its admitted wrongs, nor allow anybody else to do so if they can prevent it.

The Democrats have taken their stand, not without some contest, but yet manfully and openly. What will the Republicans do when their turn comes? We need not anticipate what particular form of words they will employ in their platform. It is not what they may say at Chicago, but what they will do in Washington, that will be decisive. The Treasury surplus is a fact of gigantic proportions. It cannot even be got rid of by a plank in a platform. It cannot be got rid of by new pension bills, and river and harbor jobs, and such like profligacy. It is too great, too near at hand. Pension bills and public works take time to get in operation. The surplus is a present fact, growing from day to day. The purchases of bonds have almost ceased because the offerings are few and the prices exorbitant. The public have seen how the bondholders have advanced their prices from day to day. They have a monopoly of the thing that the Government wants, and they take advantage of it as a matter of course. They are not to blame. Everybody would do the same thing. It is a commercial question, and must be governed by commercial rules.

What solution of this problem will the Republicans offer in place of the Tariff-Reduction Bill? The Democrats are now bound to pass their bill in some form. They are bound to pass some bill which shall bring down the public receipts to the measure of the public needs. There is no retreat from this position. They must go forward and pass their bill, however long the time required. Then the Republicans must take the position they are willing to abide by and make their campaign upon. The project of repealing the tax on liquors has been abandoned. What next? A few weeks ago the favorite plan was to repeal the sugar duties and give a bounty out of the Treasury to the planters. But the bounty plan seems to have been losing ground of late. Bounties are "catching." There are so many low-spirited industries to which a bounty would prove attractive—wheat-growing, for example—that the longer heads in the party hesitate to adopt that policy in reference to sugar. The alternative is to cast the sugar planters adrift, and make free sugar the Republican tariff policy of the campaign. When this is done, the issue will be somewhat simplified. The question will be asked why wages in the sugar industry should be cut down to the West India standard or the slave-labor standard, and why one American industry should be selected as a sacrifice for the benefit of all others. Oregon has given her verdict against tariff reform undoubtedly, but the end is not yet. We are only at the beginning.

ALLEN G. THURMAN.

THE nomination of Allen G. Thurman for Vice-President illustrates anew the weakness of our electoral system, so far as it affects that office. Theoretically, the man who is elected to the second place ought to be qualified in every respect for the first, since experience has shown that there is one chance in six of his being called upon to fill the higher position. Mr. Thurman would not for a moment be considered, under any circumstances, a candidate for President, because everybody would say that a man in his seventy-fifth year is too old for the Presidency. Yet a convention nominates a man who is in his seventy-fifth year, to an office whose holder is liable at any time during his term to become President. It nominates him in accordance with the traditional custom of selecting the candidate for Vice-President on the ground of his "availability" as a help to the Presidential nominee during the canvass.

That Mr. Thurman is a strong nominee for campaign purposes will be generally admitted. His name will warm the hearts of a good many old Democrats who have never had much sympathy with the new generation which Mr. Cleveland represents. His very age is in itself a help to his candidacy in one aspect, since it appeals to the pride which all well-regulated party men feel in an "old Roman." Moreover, it will be extremely embarrassing for the Republicans to make an issue of Mr. Thurman's age. If they say that a man who was born in November, 1813, is too old to be Vice-President, it follows necessarily that a man who was born in March, 1813, is too old to be a member of the Supreme Court, and Judge Bradley should at once resign his seat on the bench and allow Mr. Cleveland to appoint a Democratic successor. Practically, the age issue will not count for much. The voter who thinks that Mr. Cleveland is a better man for President than the Republican candidate, will not be deterred from voting for him because he thinks that a younger man ought to have been nominated for Vice-President.

Except in the matter of age, Mr. Thurman is the best man whom the Democracy could present for the Vice-Presidency. His public career has been a long and an honorable one, the only spot upon which was made by his yielding, with so many other good men of both parties, to the soft-money craze which swept over the West fifteen years ago. He was elected to the lower branch of Congress in 1844, was judge of the Ohio Supreme Court from 1851 to 1854, and its Chief Justice for the next two years, and United States Senator from 1869 to 1881. The historian whose judgments every good Republican unhesitatingly accepts has bestowed upon him the highest praise. In his 'Twenty Years of Congress,' Mr. Blaine says of Mr. Thurman that "his rank in the Senate was established from the day he took his seat, and was never lowered during the period of his service. His retirement from the Senate was a serious loss to his party—a loss, indeed, to the body. He left behind him the respect of all with whom he had been associated during his twelve years of honorable service."

If Mr. Thurman is sent back to the capital, he will return with the unique satisfaction of finding the sound doctrines of the Constitution, for which he made a gallant but hopeless fight against a Republican majority in the Senate, established for all time by the decisions of a Republican Supreme Court overthrowing the acts which he vainly protested were unconstitutional. Since his retirement in 1881, the highest judicial tribunal has rendered a series of decisions which fully sustain Mr. Thurman's position on the great issue of State rights, and which indeed sometimes read almost like extracts from his own speeches. When he entered the Senate in 1869 there were but nine other Democrats in the body, the House was Re-

publican more than two to one, and the school represented by Oliver P. Morton in the Senate and Benjamin F. Butler in the House were carrying through laws based upon the theory that the new amendments to the Constitution had worked a revolution in the relations of the States to the Federal Government.

The history of the Civil-Rights Act shows how Mr. Thurman was beaten by numbers in Congress, but saw his position ultimately adopted by the Supreme Court. This act was based upon the theory that Congress possessed the right to interfere in the States, and punish persons who denied blacks equal rights with whites in hotels, conveyances, etc. The claim was made that Congress had been given this right by the Fourteenth Amendment. Mr. Thurman earnestly contested the claim. He pointed out that the amendment only gave Congress the right to interfere when a "*State* shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States," whereas it was not pretended that any *State* had made or enforced any such law. It is interesting to see how closely the reasoning upon this point of the Republican Supreme Court in the decision of 1883, declaring the act unconstitutional, agreed with that of Mr. Thurman in his arguments of 1874:

MR. THURMAN.	THE SUPREME COURT.
"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States," says the Fourteenth Amendment. Does this bill deal with any such law of a State? No, sir; it does not profess to do so. It is not aimed at any law of a State. It is aimed against the acts of individuals. There is not one single sentence in the whole bill which is levelled against any law made or enforced by a State. . . . Why, sir, if it is constitutional reasoning that supports this bill, then I confess that all my studies of the Constitution have been wholly in vain.	An inspection of the law shows that it makes no reference whatever to any supposed or apprehended violation of the Fourteenth Amendment on the part of the States. It is not predicated on any such view. It proceeds *ex directo* to declare that certain acts committed by individuals shall be deemed offences, and shall be prosecuted, and punished by proceedings in the courts of the United States. . . . We are of opinion that no countenance of authority for the passage of the law in question can be found either in the Thirteenth or Fourteenth Amendment of the Constitution, and, no other ground of authority for its passage being suggested, it must necessarily be declared void.

It has seldom been allowed a man to enjoy such a triumph as Mr. Thurman must feel in the decisions of a Supreme Court controlled by his political opponents, asserting his views of the Constitution, and annulling act after act which he had fought on the ground that they were unconstitutional. The fact shows most strikingly how complete is the settlement of the State-rights issue. No Republican dares dissent from the position laid down by a Republican Supreme Court, while every Democrat applauds the assertion by that tribunal of the doctrines which Mr. Thurman so ably maintained.

THE ISSUES OF THE CANVASS.

THE tariff plank in the Democratic platform of 1884, which the Convention at St. Louis has endorsed as interpreted by President Cleveland's message, was as follows, and we place beside it the corresponding plank in the Republican platform of the same year:

DEMOCRATIC.	REPUBLICAN.
That change is necessary is proved by an existing surplus of more than $100,000,000, which has yearly been collected from a suffering people. Unnecessary taxation is unjust taxation. . . . The Democratic party is pledged to revise the tariff in a spirit of fairness to all interests.	The Democratic party has failed completely to relieve the people of the burden of unnecessary taxation by a wise reduction of the surplus. The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus.

Mr. Blaine's comment on the Republican plank in his letter of acceptance was: "Revenue laws are in their very nature subject to frequent revision, in order that they may be adapted to changes and modifications of trade. The Republican party is not contending for the permanency of any particular statute." It thus appears that up to this time both parties have adhered to the general principle that the tariff levied a certain amount of unnecessary taxation, and ought to be reduced; that it contained numerous inequalities, and ought to be revised. The Democrats, having a majority in the lower house, have proceeded to embody this principle in legislation, and the result is the Mills bill. The Republicans ought to have met this either by a series of amendments to the Mills bill or by a bill of their own. They have done neither. They have refused to adhere to their platform of 1884 at all. What they now say, and are very likely to embody in their platform at Chicago, is that there is no "unnecessary taxation"; that the surplus can be disposed of by being spent; that the tariff does not need revision, and that any proposal to reduce it or remove its inequalities is a proposal to establish "free trade." They traverse Mr. Blaine's assertion that revenue laws should be frequently altered, "in order that they may be adapted to changes and modifications of trade," by maintaining that the particular revenue laws under which we now live do not need to be altered at all. The *Tribune* on Friday last, in fact, treated the Democratic platform and the President's message as "a direct issue between Free Trade and Protection."

There is accordingly hardly a doubt that the cry of "free trade" will play the same part on the Republican stump this summer which the "rebel debt" played between 1872 and 1880. That is to say, their orators will allege that the Democrats propose to establish "British free trade," just as in 1872, 1876, and 1880 they maintained that the Democrats, if they got into power, would pay the rebel debt, compensate the slaveholders for the loss of their slaves, pay the claims of Southerners for damages suffered by the operations of the army during the war, and probably repudiate the national debt in whole or in part. The total loss and liability which these things would impose on the North was set forth in figures in the New York *Tribune*, and naturally made a deep impression on a large number of voters. Of course all allusion to these bogies has now ceased, and one of the Republican organs, the Philadelphia *Press*, recently, with amusing brass, made fun of them. But during the years above mentioned they were real weapons of political warfare, and were relied on for victories at the polls just as firmly as the cry of "free trade" is now likely to be.

What is the reason of this change of attitude on the part of the Republicans towards the tariff? Why do they now oppose all revision and denounce as a "free-trader" any one who proposes to correct its "inequalities"? The reason is to be found in the way in which the tariff is constructed. It must be remembered that it is not a scientific tariff properly so called—that is, a tariff drawn up by a body of experts for the purpose of affording protection to such selected industries as were considered most necessary to the national welfare or safety, and, therefore, most deserving of State encouragement—such a tariff, in short, as Colbert made for France, or as the Parliament of landholders made for England. It is a tariff constructed for the purpose of giving some protection to everybody who asked for it. There never has been any plan about it, or any pretence of one; consequently, nobody who profits by it is able to say that his claims are in any way peculiar or eminent, or that there are reasons for protecting him which do not exist for protecting other people. Each beneficiary feels that he has no guarantee for his own protection but the general support and cohesion of all the other beneficiaries, and that, therefore, any argument or influence which diminishes or destroys the protection given to one must sensibly endanger the protection given to all others. The protected interests feel like a square formed to resist cavalry: if one man gives way, the enemy may get in through the gap and break up the formation. Or they may liken it to a brick arch from which you cannot take a single brick without weakening the whole structure.

This explains the cry of "free trade" which is and will be raised against tariff reformers. It means the fear that if any changes or modifications are made in the existing tariff, and it should prove in the course of a year or two that they had not had the injurious effects on trade and industry which were predicted for them, the work of revision might be carried further, and that there would be no telling where it would end.

Now, can the cry of "free trade," under these circumstances, be made to do service during a whole summer's canvass? We think not, because it will not bear examination in the light of notorious facts. It was successful in 1880, because it was not raised until the middle of September, after Maine had been lost under the "bloody shirt" cry. A change of tactics was then suddenly resolved on, and it produced a panic—precipitated by the extraordinary weakness of the Democratic candidate on all fiscal questions—which it was impossible to dissipate in the month which remained.

Moreover, in 1880, the question of the surplus had not come up. To-day the surplus forms the most portentous fact of the situation. No one can go on the stump and denounce

tariff revision and reduction of taxation without in some manner meeting the question what is to be done with the surplus—a question which in 1880 did not trouble Dorsey, or Jay Hubbell, or any of their confrères. The only mode of disposing of it which Republican organs now suggest, is to spend it in various forms of national extravagance. This plan may now and then be thrown out as a suggestion without causing much embarrassment. But does any one seriously believe that the orators and journals of a great party can argue in defence of such a plan and set out its details to audiences all over the country through a long summer? If any one does seriously believe this, he must also seriously believe that a change has come over the attitude of the American people on the subject of governmental expenditure, so complete as to make the permanence of popular institutions among us very doubtful.

SUPPORTING CLEVELAND.

A VERMONT clergyman writes to us:

"I enclose $3 to renew my subscription once more for the *Nation*. It is as nearly indispensable to me, for more reasons than one, as a paper can be, and yet, if the *Nation* supports Cleveland after his behavior as to civil-service reform, a good many of us will be convinced that its real concern is not for that reform at all, but for the tariff. Vermont is a small State, but his hypocrisy in the matter of civil-service reform has been shown nowhere more evidently than here, and in view of the case elsewhere that is saying much. I never had any interest in a public office; never was a protectionist; shall never vote for either Blaine or Cleveland; but I have a citizen's care about saving the frame of Government itself before settling the tariff."

Our readers will bear us witness that we have not sought and do not seek to minimize the shortcomings of the Administration in the matter of civil-service reform. We acknowledge, too, at the outset, that a reformer has more reason to complain in Vermont than in most other States, the offices there having been handed over to a very objectionable editorial "Boss," who has played ducks and drakes with them among a more than usually disreputable lot of Democratic politicians—for Vermont, being a small State, does not produce Democrats in any great variety. There are but few of them who do her any credit.

We admit all this, and a great deal more. But what then? In politics, as well as in religion, one's duty does not end with prayer, or praise, or confession, or profession. After all the talk, all the criticism, all the denunciation, the necessity for action still remains. Everything we say or anybody says about politics is, in short, intended not so much to edify men about the art of government or the nature of the state, as to influence their votes at the election. Journalists do not address their readers as students of political philosophy, but as men who have it in their power once in two years to say who shall legislate for the United States, and once in four years to say who shall be their Executive. And the question which is submitted to every sensible man to-day, is not how to express through his vote views on government or morals, because voting is a very imperfect way of doing this, but how to provide the United States with the best government possible under existing circumstances. We went over this ground a good deal in 1884. The situation has not since then greatly changed, and it is not likely to change. We advise no one to vote for Cleveland who thinks he can do better—and by doing better we do not mean casting a vote for somebody as a token of admiration or esteem, but contributing to the election of somebody who, all things considered, will make a better President than Cleveland. If our correspondent knows of any such candidate, and really believes that in voting for him he would be performing an act of government, and not simply expressing an emotion, then, by all means, he should support him.

Our own reason for thinking that he knows no such person, and is not likely to know him, can be stated in very brief compass. In the first place, although we admit that Mr. Cleveland has in the matter of civil-service reform fallen far short of his promises, he has as a matter of fact done far more for it than any of his predecessors. If he had made no promises, in fact, we should all be disposed to look on him without question or qualification to-day as the champion who was likely to give the spoils system its deathblow. No man, for instance, who has filled the Presidential chair since Jackson's day would have listened for one moment to the suggestion that the New York Post-office should be taken out of politics, or would have kept the Custom-house in its present comparatively neutral condition, or postponed the removal of the great bulk of officers to the end of their term, or extended in any degree the application of the rules, or have so steadily used his veto to oppose Congressional jobbery and extravagance. Not one, too, has kept the White House and its purlieus so free from the small scandals which worked so much disgrace in the days of Grant, Hayes, Garfield, and Arthur.

In fact, while deploring as deeply as any one the President's departures from the standards set up by himself, our sincere belief is that the wideness of these departures has been hidden from him, by the extent to which his time and strength are devoted in Washington to resisting attempts to wring from him concessions of a far worse character than anything the reformers have had to reproach him with. These attempts are incessant. They begin at sunrise, and they end only at midnight. They are infinite in variety, and of every degree of baseness, and are frequently made by men whose hypocrisy and persistence in humbug the public never suspects, and his disgust for whom the President, in deference to the public, has to conceal. And it is not unnatural that a man who has to pass through this ordeal daily, and keep his own secret, should prove more or less unmindful of the unfortunate effect on the public mind of the abuses which he does not attempt to stay, and by the antics of the rogues whom, in weariness, or hopelessness, or delusion, he allows to run.

Anyhow, no matter what we may think of President Cleveland, we have to choose this summer between him and somebody else. At this writing we do not know who that somebody will be. Our belief is, that in the present condition of the Republican party he is certain to be either somebody whom the party can by no possibility elect, or somebody whom it will try to elect simply as a substitute for Blaine, and who will be pledged, if elected, to give Blaine the place and power in the Administration which he lost through Garfield's death. We advise any anxious civil-service reformer, therefore, to consider carefully, before deciding not to vote for Cleveland, the kind of men who now lead the Republican party and manage its conventions; to consider their attitude towards the spoils system, and the nature of their criticisms on President Cleveland's shortcomings, and then to study their practice when last in power under Garfield. Any one who will give himself the trouble to examine the records of the uses which Garfield and Blaine made of public office between March 4 and July 2, 1881, will, we are sure, rise up almost, if not quite, cured of any nausea which President Cleveland's inconsistencies may have caused him, especially when he remembers that the party in power was not changed in that year.

In short, to sum up, if we saw the smallest chance of Cleveland's being opposed by any one who would carry out, or come anywhere near carrying out, the pledges Cleveland made in 1884, we should not be prevented by any concern for the tariff from supporting him, because we know well that tariff reform is not within the President's reach, while civil-service reform is. But we see no prospect of anything of the kind. In the present condition of the Republican party we see no possibility of it. If the Convention nominates a fit man at Chicago, it will be with the intention of "knifing" him; if it nominates a bad one, it will be with the view of using his clothes to disguise the well-known features of James G. Blaine.

SENATOR FRYE ON THE FISHERY TREATY.

A TIMELY warning was given to the Fishery Union and to Senator Frye by the vote in the House on Thursday to put fish on the free list and to establish general reciprocity with Canada. This vote was taken on an amendment offered by Mr. Breckinridge of Kentucky to an amendment offered by Mr. Dingley of Maine. Mr. Dingley's amendment was offered to the lumber section of the Tariff Bill. It excepted from the provisions of the bill the lumber of any country which denies to our fishing vessels the same rights that we accord to their fishing vessels—a very captivating suggestion, but hardly germane to the duty on lumber. Mr. Breckinridge offered his amendment as stated, but said that if it were adopted by the House, he should still vote against the amendment as amended. The House adopted Mr. Breckinridge's amendment, and then rejected the whole.

We say that this was a timely warning to the Fishery Union, and to all stirrers-up of strife between this country and Great Britain. And here we refer particularly to the speech of Senator Frye on the treaty, which has been

heralded as an unanswerable vindication of our rights, and which we find to be a boisterous arraignment not merely of the present treaty and the negotiators thereof, but of all former fishery treaties and the negotiators thereof, and especially those of 1818, 1854, and 1871. They are all in the same boat, according to Mr. Frye—all of them surrendered our rights, all of them were unpatriotic and cowardly. Not one treaty ought to have been signed. All of them truckled to Great Britain, and the two last mentioned, those of 1854 and 1871, betrayed our own people by admitting Canadian fish free of duty. When Senator Morgan reminded him that our fishermen were still more betrayed by the Republican party, which had passed a bill in 1870, that is still in force, admitting fresh fish free of duty—this being independent of any treaty—Mr. Frye replied that that act ought to be changed, although he contended that at the time it was passed the art of freezing fish and keeping them fresh so that they could be shipped to distant parts of the country had not been invented—as though that could make any difference with the principle involved. We remark in passing that frozen fish from Canada were plentiful in markets as far distant as St. Louis in the very year that a Republican Congress voted to admit such fish free of duty. The invention of refrigerator cars is perhaps of later date, but the invention of wooden boxes packed with ice and sawdust, for carrying fresh fish, is considerably older. But we suppose that Mr. Frye would not contend that it is right to give the States on the Canadian border privileges in the matter of fresh fish which are denied to other parts of the country.

A tirade directed against all the fishery treaties that we have ever had, whether negotiated by Democrats or by Republicans, has the merit of impartiality at any rate. Concerning the Treaty of 1818 Mr. Frye says: "We deliberately surrendered our fishery rights, and a blow was dealt at that industry from which it has never recovered." Let us "stick a pin" there. If the Treaty of 1818 was a surrender of our rights, the abrogation of the Treaty of 1871, on our motion, caused that Treaty of 1818 to revive, did it not? We have not yet abrogated it, although there has been some talk of giving notice to that effect. Great Britain does not hold the doctrine that treaties are perpetually binding upon the signatories. But until notice of abrogation is given, the Treaty of 1818 certainly is binding. Now we are living under a treaty which, according to Senator Frye, is a deliberate surrender of our fishery rights. What should we do, then, but try to get better terms? It is not much to the purpose to scold Richard Rush and Albert Gallatin and President Monroe, and the Senate that ratified the Treaty of 1818. If they made a bad bargain for us, it would seem to be the dictate of reason to try and get a better one. Certainly, the treaty which Mr. Frye wants to reject is a better one in some particulars. It cannot be worse, according to his description of it, although, as he has Secretary Bayard within reach of his stick, while Rush and Gallatin are not so handy for the purpose, he makes it appear that there is much less excuse for the former than for the two latter.

The recklessness of some of Mr. Frye's statements is quite inexplicable. He said, for example, that the negotiators of the present treaty never consulted with anybody who was familiar with the fishery question. Being asked by Senator Payne whether Mr. Putnam, one of the negotiators, was not acquainted with the fishery question, he pronounced a high eulogium upon that gentleman, and said that he (Frye) had once recommended him to a Republican President for Circuit Judge of the United States, and that Senator Hoar had joined in the recommendation, but he added: "I do not admit that Mr. Putnam was a man who knew more about the New England fisheries than any other man; and in the presence of the treaty he agreed to, I deny it emphatically." Then Mr. Payne inquired whether Mr. Putnam had not been the counsel in the *David J. Adams* case. Yes, replied Mr. Frye, but that was only a case concerning the right to buy bait. Mr. Putnam might be a good bait lawyer without knowing much about the headland doctrine. In short, Mr. Frye's sweeping insinuation that our negotiators knew nothing about the fishery question crumbled at a touch.

We do not find in Senator Frye's speech the broad doctrine that is laid down in the Senate Committee's report, that the fishery question is not a proper subject for treaty negotiation at all; but his argument runs that way, for if all our treaties have been disgraceful and ruinous, whether made by Republicans or by Democrats, and if even our own legislation on the subject of fish duties has been bad, although we have only found it out within a short time, the case is truly desperate. We had best abrogate all our treaties and repeal all our laws relating to fish, enter at once upon the state of nature, and see what that will do for us.

THE FRENCH CRISIS.

PARIS, June 1, 1888.

THE political aspect of Europe has not been for many years as dark as it is now; and the uncertainty of the future is greater than I have ever known it to be. This uncertainty is owing to several causes, but the most important of all is probably the sudden and, it may be said, unexpected development of a crisis in France which is as mysterious in its causes as it is in its character. I will not speak of the man who has personified this crisis, and who has declared open war on the present republican Constitution. His importance is derived, not from his character nor his services, but from his negative programme, and from the fact that he has become the head of all the malcontents. He is a cry rather than the head of a party, and in his followers are found members of the Commune and members of the Conservative parties. The old Duc de Broglie, father of the present Duke, who was very hostile to Prince Napoleon, afterwards the Emperor Napoleon, used to say that the Prince's programme, at the time when he threatened to make the *Coup d'État*, was a very simple one: "He says to the scamps: 'I am with you,' and to the honest people, 'I protect you against the scamps.'" He was justified by the fact that the *Coup d'État* of December 2 satisfied at the same time those who belonged to what was then called the party of order, and the Socialists who had erected barricades in June, 1849, and rebelled against the Chamber.

The coalition between the extreme Conservatives and the extreme Radicals is not a new fact in history: demagogy and dictatorship are not irreconcilable terms. Many of the Terrorists of 1793 became the most servile and violent Senators of Napoleon III. M. Thiers said at the time when he was preparing to reconcile the Assembly of Versailles to Republican institutions: "The Republic will be Conservative or it will not exist." He brought over to his side many of the partisans of a constitutional monarchy. He acted on principles which are so clearly laid down in the 'France nouvelle' of Prévost-Paradol, a book which he had himself inspired before the end of the Empire. It seemed to many minds that there was no real difference between a Conservative republic and a Liberal monarchy—that all the organs of Government could be the same in the one and the other. The only difference was in the nature of the Executive power, or in its origin. The President-elect and the hereditary king were both the first magistrates of the country. This theory made many converts. The Assembly, however, had a preference for a monarchy, and replaced M. Thiers with Marshal MacMahon; but, the Comte de Chambord having shown no disposition for the rôle of a liberal king, the theory of M. Thiers triumphed, though he was no longer in power: a monarchical Assembly voted a republican constitution.

The "loyal essay" of the Republic, to use one more of M. Thiers's expressions, has now lasted for many years; and what has been its result? I will not enter into any criticism of the various administrations which have followed each other in rapid succession; I will only state bare facts. The power has been transferred from the Conservatives who accepted the Republic to the hands of more and more advanced Republicans; there has never been a movement of reaction, the movement has always been in the same direction. We have gone, so to speak, through different political strata, and never returned to the strata which were abandoned, till now we have arrived at a region which may be called the political substratum. The members of the old "Left Centre," the followers of M. Thiers, are as bitter in their denunciations of the men in power as the Conservatives.

If there were only two well-organized political parties, with their traditions, their defined programmes, the remedy would be obvious: France would do what England or little Belgium does—the balance of power would change its direction. But the case is different in France, and the very form of government is threatened, not only by the Monarchical and Bonapartist parties, but by the new Republican aspirants, who threaten to tear the Constitution in pieces, to suppress the Senate, and perhaps even the Presidency. The Constitution, once only attacked by the Monarchical party, is now attacked, and more vigorously, by thousands who still call themselves Republicans; and there lies, in my opinion, the greatest danger of the situation, viz., in the contempt shown in the Republican ranks for the Constitution, for the political law of the country.

The cry of "Dissolution—revision" means really the total destruction of the present state of things, and this is why the same cry is uttered by all who wish for a change, and their number is increasing every day, in virtue of a certain law of attraction and of imitation which is manifest in all communities. It

would be imprudent to prophesy any change in a particular direction; it would be equally imprudent to confide too strongly in the continuance of the present situation and in the perpetuity of the existing system. The nations of Europe are looking on France with feelings of distrust, and the pacific protestations of the successive administrations do not tend much to diminish this distrust, as these administrations are too short-lived and insecure. It may be said, also, that the Republicans act in power as if they did not feel in power and were still in opposition; they cannot conquer their old habits, their old instincts. What must be thought, for instance, of the resurrection of a "Société des droits de l'homme et du citoyen," which was formed a few days ago, with much ceremony, under the auspices of M. Ranc, an Opportunist, M. Clémenceau, the leader of the Radicals in the Chamber, and a certain M. Joffrin, who is a leader in the Municipal Council of Paris? Is not the Republic a sufficient guarantee of the rights of man? This society reminds people too much of the club of the Jacobins which governed the Convention; it is as foolish a resurrection as the new Bastille which has been rebuilt on occasion of the centenary of 1789, and where you can, for twenty sous, see every day a representation of the escape of a prisoner. The new "Society of the Rights of Man" is not more serious than the new Bastille —these theatrical manifestations are almost childish. The Republicans have in their hands all the organs of government; they have the Executive, they have the majority in both chambers; why should they seem to distrust themselves? The new "Society of the Rights of Man" is nominally destined to prepare the means of resistance against any reaction and any dictatorship; it is intended to work against what is called "Boulangism." But it is a "telum imbelle sine ictu," and will do more good than harm to Boulangism, as the great majority of the nation abhors the memories of 1793: Jacobinism is not the modern name of Republicanism.

The situation in France is one element of uncertainty in Europe; the health of the Emperor of Germany is another. Divisions, rivalries, difficulties of all sorts are hidden for a moment, but they have not disappeared. When you enter a sick-room, you try to make as little noise as possible. The governments of Europe have obeyed the same sentiment. Since the accession of the new Emperor, the violent attacks of the Russian Panslavic press on Germany have ceased as if by enchantment; the Eastern question lies dormant; Prince Ferdinand is still in Bulgaria, and the threatened occupation of that country by a Russian and a Turkish army has not yet taken place. It seems as if, by common consent, the solution of all dangerous questions was to be postponed; but the present calm is only apparent—many things that are not said aloud may be said in whispers, and from time to time an incident reveals the dangerous character of the situation.

In her recent journey through Europe Queen Victoria saw the Emperor of Austria and Prince Bismarck, and it is impossible not to be struck with the fact that since her return the question of the defences of England and of the increase of her navy has assumed unexpected proportions. It had seemed hitherto that England felt quite safe, and intended to look on the wars and revolutions in Europe like the wise man of Lucretius who regards the tempest from a high rock. The discussion between Lord Wolseley and Lord Salisbury has been the beginning of a more active policy. It is difficult to imagine a greater change than is manifested in the tone of the press in England at the present time as compared with their language a year ago. Italy is also alarmed about her coasts and her cities; and the Italian Chamber speaks of fortifying Leghorn, Naples, and Palermo. In Hungary we have had the incident of the speech of M. Tisza, which has created great emotion all through Europe. The Hungarian Minister has shown a great want of confidence in the men, whoever they may be, who will have charge of Paris during the exhibition of 1889, and who will have to protect the exhibitors, their goods, and their flags. Count Andrássy has tried to reduce this incident to a minimum, and the French Government has naturally accepted his friendly declarations; but such speeches as M. Tisza's are nevertheless like straws which show which way the wind blows.

The most important incident, however, of recent date has been the systematic isolation of Alsace-Lorraine, which results from the severe measures taken by the German Government against all travellers who wish to reside in the conquered provinces, or even to cross them. I confess my utter inability to explain these measures. In our time, with all our newspapers, and books, and telegraphs, it is no longer possible to separate a province from the rest of the world; the actual presence of a few foreigners in Alsace will make no great difference in the feelings of that province, even if these foreigners should all be French.

On the whole, there is a growing dissatisfaction felt everywhere; the burden of the armed peace is getting heavier and heavier. We approach the centenary of 1789. The monarchies of Europe refuse to celebrate with us an anniversary which reminds them not only of the downfall of a monarchy, but of long and bloody wars, of their capitals invaded, their armies defeated, their provinces lost. We might console ourselves with our isolation if we were satisfied with ourselves; but the strife of parties has never been so ardent and the absence of leading minds so much felt.

FROM NEW YORK TO MADRID.

MADRID, May 15, 1888.

IN going from New York to Spain one can plunge at once *in medias res* by taking one of the Mediterranean line of steamers which call at Gibraltar on their way to Italy. But the Horatian maxim is not a good one for travellers to follow. No expert tourist would care to be placed abruptly on the top of Mont Blanc and then walk down, because what would have been, on going up, an endless series of picturesque surprises, gradually leading to a climax of sublimity, must, on going down, prove so many disappointing degrees of an anti-climax. Similarly, in making a tour of Spain, it would be foolish to begin with Seville and Granada, instead of approaching these centres of local color from the north, by way of the semi-Spanish Bordeaux and the semi-French Madrid. And there is another cogent reason for taking this northern course: it enables one to cross the ocean on one of the new and comfortable English, German, or French steamers. It is not so much the superior speed and safety of these new steamers that speak in their favor as the superior arrangements for ventilation.

On the way from Paris to Bordeaux there is very little to see, except an abundance of gardens and fields, and peasants busy in them, and herds of sheep, and women doing their washing in the creeks, and occasional groups of trees remarkable for their abundant supply of the parasitic mistletoe. Bordeaux, like most French cities, resembles a copy of Paris made by a second-rate artist. The surroundings are uninteresting, and it must be a tiresome place to live in. Théophile Gautier remarks that at Bordeaux Spanish influences begin to assert themselves, and he states that most of the street signs are in two languages. This may have been true forty-eight years ago, when he wrote his book on Spain, but to-day one sees few Spanish signs. Possibly the railroad has changed this by bringing nearer the influence of Paris to neutralize that of the Spanish boundary. But the women of Bordeaux perhaps do indicate the presence of Spanish blood. They are not only prettier but more graceful than the Parisiennes. And there is another kind of foreign influence visible in Bordeaux, which ought to arouse the indignation of the chauvinists. Nothing strikes one more in the cafés of Paris than the yearly-increasing number of beer-drinkers. In Bordeaux, the home of French claret, this phenomenon appears still more incongruous. Of every five men I saw, four were drinking beer. Perhaps they have discovered that ordinarily there is more honesty in a glass of German beer than in a barrel of French wine. Yet the Bordeaux I drank at the hotel was both cheap and good.

Bordeaux has at present 221,000 inhabitants. Its port admits vessels of 2,500 tons, and has room for 190 of them. The city has a fair picture gallery, a library of 170,000 volumes, and an old opera-house which is considered the largest and best in the country outside of Paris. But there was no performance on the evening when I was there. Perhaps the greatest curiosity is the tower beside the Church of St. Michel, with twenty-two bells near the top. There is nothing strange about this end of the tower or the bells, but the other end of it contains a chamber of horrors which is absolutely unique. After receiving half a franc, a young woman takes a lantern attached to the end of a long stick, and precedes the visitor down a flight of stairs. Here, below the tower, is a circular chamber, along the wall of which are placed, in an *upright* position, about thirty or forty mummies—men, women, and children. They are not artificial mummies like those found in Egypt, but natural mummies, the soil beneath this tower having once possessed the mysterious chemical property (which it has now lost) of preserving human bodies in a state resembling leather. There they stand, exactly as Gautier described them half a century ago, with a gruesome realism worthy of Zola—the general killed in a duel, the woman who died of cancer, the negro woman, the baby who looks like a rubber doll, the boy whose clenched fists and agonized expression indicate that he was buried alive, etc. The young woman described these mummies and touched them with her stick and her hand as if they were so many alligator skins on exhibition.

As Bordeaux is not exactly a cool place in the middle of May, I was glad to get away and start for the Pyrenees. I expected that it would be cooler in the mountains, but was hardly prepared to find snow still lingering on some of the summits. The scenery in some places is grand, in others delightfully picturesque, but not sufficiently so to tempt the tourist to come and see it for its own sake. The road is a well-built one, and the engineers had many unusual difficulties to overcome. A peculiar property of many of the numerous tunnels is that while the train passes through them they become musical instruments, emitting a deep, hollow sound like that produced by blowing into a large empty bottle. At Irun, the first Spanish station, cars have to be changed, the Spanish rails being of a different gauge from the French—in order,

it is supposed, to prevent any sudden invasion from France in case of war. Fontarabia, San Sebastian, and other interesting stations are passed, where one would like to linger for a few hours, but cannot unless he has unlimited time, as there is but a single train a day. Some amusement is afforded by observing, from the car-windows, the customs of the Spanish mountain peasants. Agriculture is still in that primitive condition in which women and cows are used as beasts of burden. I saw in one field a man pulling along a harrow, while two women held it down.

We were now in the country of the Basques, whose language is so unique and so difficult that, according to the legend, the devil gave it up in despair, having succeeded in mastering only three words in two years. I have since, however, met an English wine-merchant who says he can speak the Basque tolerably well, and that he does not consider it so difficult as Welsh. I had no opportunity to hear it spoken, as the only native in my coupé was a very intelligent and courteous Castilian, who gave me and a Frenchman a free lesson in Spanish, and much useful information. When I told him I had read 'Don Quixote' twice, I could see how I rose in his estimation. He and the other Spaniards, he said, read it all the time; and then, as if to show how much modern Spaniards have improved over their ancestors, he dwelt with much emphasis on the fact that, although now his books are read in every country, Cervantes was a poor man—emphasizing the *pobre* by striking his pocket repeatedly.

Burgos, the first Spanish city in the north, which no tourist can afford to miss, is, like most of these cities, reached at night. In the morning I was waked by a military band and procession passing beneath my window. The soldiers were dressed in loose red trousers and long blue coats. The band consisted of a dozen trumpeters, followed by a regular brass band. The trumpeters first played alone, whereupon the band took up the strain, and finally they all united, which produced an excellent effect. I had read so much about Spanish beggars that when I went out into the street I expected to be immediately surrounded by a dozen of them; but, to my surprise, I was not accosted half-a-dozen times during the whole day. I took a guide to show me the sights of the town, including the Cathedral, the ruins of the Cid's house, his bones, and other relics. On discharging him at lunch time I gave him three pesetas (60 cents), expecting him to remonstrate and demand at least twice as much. But he was most profuse in his thanks, and appeared to be so impressed by my extravagant generosity that when he casually met me in the afternoon, he actually offered to devote a few more hours to me without extra charge. Obviously, Burgos was destined to overthrow all my preconceived notions regarding Spain.

The lion of Burgos is, of course, the Cathedral, which differs from most Gothic cathedrals in having been actually finished, and differs, moreover, from other Spanish cathedrals in being more impressive from without than from within, although its effect would be immensely heightened if it stood on the top instead of at the bottom of the hill. The charm of the interior lies less in the architectural features than in the great profusion of marvellous sculptured ornaments, executed with extraordinary finish. Many of the houses in the city are painted, and in such gaudy colors that De Amicis exclaims, with pardonable exaggeration: "If there were an insane asylum for painters at Burgos, one would say that the city had been colored some day when its inmates had escaped." But these lively colors do not conceal the fact that Burgos is a dead city, whose greatness lies in the memories of the past. There did not appear to be enough people to fill the houses and the streets, although the day I spent there was a holiday, when many peasants in picturesque costume visited the city. From the way they stared at me I concluded that a stranger in those parts is indeed a stranger. HENRY T. FINCK.

Correspondence.

MR. H. C. LEA AND THE COPYRIGHT BILL.

TO THE EDITOR OF THE NATION:

SIR: I think that you will agree with me that you owe me an apology—if not for my satisfaction, at least for the sake of consistency with your own standard of conduct.

In arguing against the Chace Copyright Bill, in the *Nation* of January 5, you were pleased to single me out for special animadversion. I was quoted as the representative of "the projectors and defenders of the bill," and the effort was made to deduce, from what I had urged in its support, that "the whole design and purport of the bill" was simply to enable American publishers to charge upon reprints "double or treble the price of the original English edition." The inference was unavoidable that, in advocating the bill, as I had done, as a measure of justice to American authorship, I was acting in bad faith, and was concealing my real object—in your own words, my argument was "a transparent pretence." To be sure, any one familiar with the subject could see that the contention of the *Nation* was a trifle absurd, but it answered the purpose of bringing the bill, and its "projectors and defenders," into contempt.

Since then, the changes made in the bill have been disadvantageous to both American and foreign authors. I did not approve of them, but assented to them in the interest of harmony. Yet, when thus modified for the worse, the *Nation* of May 17 says of it: "It is not, as has been often remarked, by any means the kind of bill which some of the earliest and most active friends of international copyright would like to see, but it has the immense and overwhelming merit of being an acknowledgment of the right of foreigners to the enjoyment of literary property on American soil." I have no doubt that you share my regret that "the immense and overwhelming merit" of the bill was not as clearly visible to you in January as it is in May.

Differences of opinion as to the details of so comprehensive and important a measure as this are inevitable, but it is the part of wisdom in those who are coöperating for a common object to harmonize such differences as far as possible; and it is, to say the least, a blunder to attribute unworthy motives to allies with whom one may happen to differ on points of policy. The *Nation*, I may say, was the last source from which I had a right to expect such treatment.

The bill is not, in all respects, what I would have made it had I been an autocrat, but I believe it to be the best attainable measure. I have had some experience in both politics and business, and at an early stage in the movement I made up my mind as to what was practicable, and how its accomplishment had best be attempted. This I have pursued undeviatingly, at considerable expenditure of time and labor, and without any personal interests to subserve. I found myself placed in opposition to those whose zeal at first blinded them to the fact that statesmanship consists in doing what we can, even if we cannot do all that we want, and in not throwing away the substance to grasp at the shadow. I was thus exposed to misconstruction on the part of many whom I was endeavoring to serve, but who, I believe, now recognize that I have been true to my convictions, and that I was not as much mistaken as they thought me to be. I imagined that the *Nation* knew enough of me not to join in imputing to me wrong motives, and in this I was disappointed. It is for the *Nation* to say whether it can afford to leave the imputation unretracted.—Very respectfully,

HENRY C. LEA.

PHILADELPHIA, May 30, 1888.

[We doubt if our readers discovered in the article to which Mr. Lea takes exception any imputation on his honest desire for an international copyright law. But as he seems to feel that such a construction is possible (a circumstance which we sincerely regret), we hasten to disclaim any intention to insinuate wrong motives upon his part, and to affirm our belief in the entire sincerity of his endeavor to secure legislation to amend the present copyright law for the benefit of foreign authors, as well as for the protection of American authors. But, as Mr. Lea very truly says: "Differences of opinions as to the details of so comprehensive and important a measure as this are inevitable"; and as the importance of these differences must be in proportion to the comprehensiveness and momentousness of the original proposition, we believe that the greatest possible latitude should be given to the discussion of them. The quotations made by Mr. Lea do but scant justice, we think, to the arguments used in the article to which he refers, and we take the opportunity to briefly recapitulate the chief points of difference.

The single purpose of a so-called international copyright bill is to extend, as a simple matter of justice, the protection of our copyright laws to the works of foreign authors when these are brought into the United States. In framing a law designed to secure this end, therefore, there is no need to take into consideration the possible effect of its practical operation as regards the interests of any other class of persons. The bill drawn up by the Authors' Copyright League is a good example of a bill having this single end in view, and it contains, of course, neither the stipulation of American manufacture nor the prohibition of importation. It may be admitted, however, that the operation of an international copyright law would affect, in a greater or less degree, the interests of other persons besides foreign authors, more especially those of the American book-buying public and the American publishers, together with the adjuncts of the latter—the printers, type-setters, etc.; but the interests of all these classes, we firmly believe, would be served by the passage of an unrestricted bill similar to that just named. Mr. Lea, however, assumes that a bill so framed would not protect American publishers from possible loss of work due to the manufacture outside of the United States of the books written by foreign authors, and he reasons that, "in considering the expediency of the condi-

tions to be imposed on foreign authors admitted to the benefits of American copyright, this is a consideration which legislators cannot overlook." And it may with entire truthfulness be said of the "Chace" bill (which Mr. Lea is said to have drawn up), that its "whole design and purport," as distinguished from the authors' bill referred to above, is to insure, in Mr. Lea's own words, "the manufacture, by our own people, of all copyrighted books for our markets;" for as regards the property security granted the foreign author, that is sought to be obtained in both bills by *absolutely identical legislation*. Mr. Lea provides for such American manufacture with autocratic simplicity. He proposes to make the very protection of the foreign author's property, which it is the purpose of an international copyright law to secure to him, contingent upon the printing of his book in this country; and, to make his proposed measure more efficient, he adds an absolute prohibition of any importation of the author's original edition.

Our present copyright law permits the American author, if he prefers to do so, to have his book manufactured abroad, but, in order to discourage such subtraction from the business of the American book manufacturer, the former is made to pay a tariff tax of 25 per cent. upon the price of his book. This tariff protection the publisher would have, of course, equally as against the foreign author, in case of an international copyright; but that it is not large enough to give him entire advantage over the cheaper production possible in Europe is shown by the fact that some American authors even now have their books printed and bound abroad, and, after paying the duty, they are still able to sell them at a price as low as that asked for similar books made in the United States. As it would not do, at this stage of enlightened opinion, to propose to enlarge the publishers' protection by increasing the tariff on books, the alternative chosen was the complete removal of competition by the prohibition of importation.

The contention of the *Nation* of January 5, which Mr. Lea characterizes as being a "trifle absurd," was that these stipulations—compulsory manufacture in the United States, together with absolute non-importation—would secure to the American publisher of foreign books such perfect, non-competitive monopoly as would enable him to force the American reader to choose "either to go without the book, or to pay for the American reprint of Tennyson's next poem double or treble the price of the original English edition." As Mr. Lea himself says, with much force, in his statement before the Senate Committee on Patents: "Any form of copyright which shall convert into a monopoly the existing free competition in the reproduction of new foreign works, will greatly raise the price of current literature. It will not be the mere addition of the sums paid to authors, but it will be the highest price which the business sagacity of the holders of the copyrights shall consider likely to bring in the largest profits. This is an axiom so self-evident that it need only be alluded to."

Mr. Lea's argument is, that there must be compulsory printing in the United States, and importation must be shut off, else the English authors will have their books manufactured in England, where, he admits, printing and binding are much cheaper than in this country; and as they "can be freighted across the ocean at a trivial cost," the result, according to his reasoning, will be that "the prices to consumers here will be on a level with the high rates customary in England."

What are these high rates, and how do they compare with the prices of books in America? The *Publishers' Weekly* for the first half of 1887 records the titles and prices of 1,354 American bound volumes. Of this number, only 11 were published at a price of 25 cents or less, while 61 were priced 50 cents, and there were 100 in all at 50 cents each or less. Between $2 and $5 each, there were 434, of which number 87, or fully 20 per cent., were published at the highest price. In England, during the same period, the London *Bookseller* indicates the publication of 346 volumes ranging in price from 6d. to 1s., and 455 volumes at 1s. 3d., 1s. 6d., 1s. 9d., or 2s. each—in all, 801 volumes at 48 cents or less per volume. Of books published at prices from 8s. to 21s. (the nearest English equivalents to our $2 and $5), the number was 594, and of this number 218 volumes were novels at 10s. 6d. per volume. Out of this total number only 27 volumes, or about 4½ per cent., were priced at 21s. While, therefore, in the United States there were only 100 volumes below 51 cents in price, to 434 published between $2 and $5, in England there were 801 of the lower range of prices to 594 of the higher—a showing decidedly in favor of English low prices. Only bound volumes were considered, all the cheap reprints of English novels in this country being thereby excluded. Want of space forbids our dwelling upon these figures, but they speak for themselves.—Ed. Nation.]

VON HOLST AND HIS CRITIC.

To the Editor of The Nation:

Sir: In his letter in to-day's *Nation*, Dr. von Holst intimates that I misquoted his remark as to the relative estimation of Senators and Representatives in the popular mind. If he had given his own version of the sentence in question, your readers could have judged for themselves whether I had done him an injustice, and it would have been unnecessary for me to trouble you with these lines. Even so, however, I need only refer to the letter of "A. B. H." (printed in the *Nation*, No. 1188, p. 280), where Dr. von Holst's own words are quoted in the original, with a sufficiently close translation.

In order to traverse the assertion of Dr. von Holst, made twice in his letter, that I do not understand his article, it would be necessary to cite much greater portions of the article itself than I could reasonably ask you to make room for; but I am content to allow this question to be decided along with the one first referred to—that is, if I have misquoted the Professor, I will admit that I have misunderstood him; if not, not.

Dr. von Holst further says that, with regard to the President's share in the legislative power, I prove myself unable to distinguish between a *fact* and the *theory of the law*. If, in regard to the veto power of the President, there be a distinction between the actual facts and the theory of the law, it seems to me that any discussion of constitutional questions, in order to have a practical rather than a merely academic or historical value, must rest on facts in preference to theory. In other words, the Constitution as it is, rather than the Constitution as the fathers supposed it would be, is the topic that I imagined the Professor took for his theme.

The reasons which Dr. von Holst gives, in his article, for believing that the Senate will never be shorn of its power fail to convince me, partly because I am sceptical of political prophecies, partly because it seems to me that the Senate is steadily falling in the popular estimation, and that when an institution no longer possesses the respect of the people, its days are numbered, and its functions will transfer themselves, in the natural course of events, to a worthier instrument. N. Z.

New York, June 7, 1888.

MATTHEW ARNOLD AND FRANKLIN.

To the Editor of The Nation:

Sir: A paper in the last *Century* cites again the oft-quoted passage in which Matthew Arnold tells how he was delivered from the bondage of Franklin's victorious common sense by the perusal of a proposal of the sage for a new and more pleasing version of the Book of Job in modern English. It is strange that no patriotic Philadelphian has called attention to the injustice done by the greatest English critic to the "greatest American" by using him to point the moral of this particular tale. Any one who will turn to the original passage in Franklin's works will see at once that the entire proposal is an outrageous satire on the British Government, and was never intended to be taken seriously. It would appear that, even in those primitive times, "American humor" was already too subtle for the most flexible British intellect.—I am, sir, yours, etc.,

Paul Shorey.

Bryn Mawr, June 4, 1888.

THE FREE EXERCISE OF RELIGION.

To the Editor of The Nation:

Sir: Permit me to call attention to a matter of grave constitutional importance, in connection with the Contract Labor Act of February 26, 1885, as interpreted by the recent decision of the case of the United States vs. the Rector and Church Wardens of Holy Trinity Church.

In the free exercise of their religion, the Christians of Holy Trinity Church called the Rev. E. W. Warren from England to minister to their spiritual wants as a clergyman. Before Mr. Warren left his native home and country, they contracted to pay him a proper remuneration. They believed that the laborer was worthy of his hire, and he believed that he was commissioned to preach to all nations. The United States Circuit Court in New York city has decided that the Contract Labor Act makes the said contract illegal and void, and makes the action of Holy Trinity Church punishable by a penalty of $1,000, both being prohibited thereby.

If this decision be correct, Congress has constitutional power to prohibit every church in the country from contracting with any clergyman, missionary, or revivalist abroad to come here to preach the Gospel to its members. This I deny. Supposing that Congress can prohibit the importation of laborers under contract in ordinary cases, it can never do so in cases in

which such prohibition interferes with the free exercise of religion. Such interference is expressly prohibited by the United States Constitution, Amendment 1st, which reads: "Congress shall make no law for the establishment of religion, *or prohibiting the free exercise thereof.*" The Contract Labor Act is unconstitutional and void in so far as it prohibits the free exercise of religion. Holy Trinity Church proceeded in the free exercise of religion in calling Mr. Warren, and its action is lawful and rightful, anything in the Contract Labor Act to the contrary notwithstanding. Its members have a right to be spiritually ministered unto by the Rev. Mr. Warren. The United States Government cannot deprive them of that right, as long as the above words of our written Constitution are not erased.

Not long ago, in Brooklyn, Plymouth Church called an English clergyman to be the late Mr. Beecher's successor. After due consideration, he felt it to be his duty to continue preaching the Gospel at home, but, if the act of Congress be valid, he could not have come at all under any express or implied contract for securing the subsistence of himself and his family.

There are numerous Hungarian, Polish, Italian, and other emigrants in the country, whose religious wants cannot be supplied unless clergymen speaking their own languages come to them from Europe. These emigrants can neither live, die, nor bury their dead, in a religious way, unless they are ministered unto in their own language. More of them are arriving every day, and more ecclesiastics are needed for them every day. If the act be valid, no ecclesiastic can be brought from Europe under any contract for his support, whether made by the newcomers or by our native citizens. A Greek church is to be erected in Chicago, for the support of which the Russian Government makes itself *partially* responsible. If the act be valid, no new priest can be sent from Russia on the death of an incumbent.

Nearly all churches in this country have intimate religious relations with churches abroad. Mr. Moody was appreciated as much in England as in his own country. But if he were an Englishman, he could not come here to preach, if Americans contracted beforehand to pay his expenses, unless the act of Congress be void in cases of religion.

If John Wesley were alive, the Methodist Church of this country could not ask him to come here to minister to his spiritual children, if they offered to pay his expenses and if the act be valid. If John Bunyan were alive, the Baptist Church of the United States could not secure his presence here, for similar reasons. Nay, if the Apostle Paul himself were alive, and if Americans asked him to visit the New World at their expense, he could not say to them as he once said to others: "I will come to you shortly, if the Lord will." If the act of Congress be valid, he would have to say that he must wait until Congress permitted him to come.

The opinion in the case will be found in the New York *Law Journal* of May 24, 1888. It makes no reference to the point of law herein discussed. It is, therefore, proper to call public attention to so important a matter. This is done in the hope that when the appeal reaches the Supreme Court of the United States, the Contract Labor Act will be held to be unconstitutional and void in so far as it interferes with the free exercise of religion in Mr. Warren's case and all others.—Respectfully,

BRINTON COXE.

PHILADELPHIA, 1711 Locust Street, June 9.

THE VICE-PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: In reference to an article on page 468 of the *Nation* of 7th inst.: Suppose the salary of the Vice-President of the United States be made larger than that of the President thereof; would the most proper person for President be likely to choose the office of President? X.

JUNE 11, 1888.

AN AMERICAN EGYPTOLOGICAL STUDENT.

TO THE EDITOR OF THE NATION:

SIR: Many of your readers will gladly learn that, with the kind coöperation of Prof. C. E. Norton, the head of the Archæological Institute, an American is already conditionally secured to aid in the explorations by the Egypt Exploration Fund of England and America. Mr. Farley B. Goddard, Ph.D., of the class of '81, Harvard, as is proposed, will pass a few months of study at the British Museum and the Louvre, aided by the Fund's officials who are also connected with those institutions, and then begin work in Egypt with Naville and Griffith, probably at one of the classical sites, for which Mr. Goddard is particularly qualified. This will entail an expenditure of $1,000, and I devise an "American Student Fund" (as there is a special student fund in England) for this purpose. Donors to it will go on the Fund's lists, receive the illustrated memoirs and annual reports, and be entitled to all the privileges of contributors to the general Fund. The Institute donates $100, and I earnestly beg for sums of $5 upwards to complete the requisite sum.

WM. C. WINSLOW,
Vice-Pres't and Hon. Treasurer.

525 BEACON STREET, BOSTON, June 9, 1888.

PRUDENTIALS.

TO THE EDITOR OF THE NATION:

SIR: We have in Massachusetts the term used in our statutes, of "prudential affairs." Towns here are allowed to pass by-laws for the management of their "prudential affairs," and to impose a penalty not exceeding twenty dollars for a breach thereof. Our churches have also "prudential committees" for managing their secular business. My query is as to the origin of the word. In the laws, I trace it to our 'Body of Liberties,' in 1641. Can any one give me an earlier example of its use either in state or church affairs, either here or in England? In fact, I shall be obliged for any examples of its use in the seventeenth century. Was it used in other colonies?

It seems to bear the same relation to "prudent" that economy does to the various uses of that word and its derivatives. A man is "economical," but we speak of political "economy," and of bodies managing their "domestic economy."

W. H. WHITMORE.

BOSTON, June 9, 1888.

Notes.

JOEL MUNSELL'S SONS, Albany, will publish at once, if enough subscriptions are received, a Supplement by D. S. Durrie to his invaluable 'Index to American Genealogies.' It will fill forty pages and be sold for one dollar.

A 'Complete Volapük Dictionary,' in two parts, Volapük-English and English-Volapük, based on the last editions of Schleyer and Kerckhoff by Klas August Linderfelt, will be published directly by C. N. Caspar, Milwaukee. A new feature is the indication of the source of each of the world-language vocables, of which the English is said to furnish more than 60 per cent. The specimen pages show a very neat typography.

'The Black Arrow: a Tale of the Two Roses,' by Robert Louis Stevenson, with full-page illustrations by Will H. Low and Alfred Brennan, is about to be published by Chas. Scribner's Sons.

Harper & Brothers publish immediately 'The Russian Peasantry,' by "Stepniak"; 'The History of Nicholas Muss,' from the French of Charles du Bois-Melly; and 'Hymns and Tunes as Sung at St. Thomas's Church, N. Y.,' composed and adapted by George William Warren.

Whitaker & Co., London, are about to bring out a choice selection of the most popular poems and songs of Dr. Charles Mackay, the moral effect of which upon the author has seemed at times less lasting than upon his public—particularly during the war of the rebellion.

'Selections from Ruskin,' viz., from his 'Sesame and Lilies,' 'Queen of the Air,' and lectures on war, made by Edwin Ginn, will be added by Ginn & Co. to their "Classics for Children."

J. B. Lippincott Co. have in press the complete works of Shelley, in prose and verse, edited by Richard Herne Shepherd in five volumes; a handy edition of the Brontë novels, uniform with the Dickens and the Thackeray; 'Half-Hours with the Best Foreign Authors,' translations selected by Charles Morris; 'A Popular History of Music, Musical Instruments, etc.,' by James E. Matthew, with numerous illustrations; 'Embroidery and Lace,' from the French of Ernest Lefebvre, also illustrated; 'An Elementary Treatise on Human Anatomy,' by Prof. Joseph Leidy; and 'Animal Life of the Sea-Shore,' with special reference to the New Jersey and Long Island coasts, by Prof. Angelo Heilprin.

Thomas Whittaker has nearly ready the 'Life of Lord Herbert of Cherbury'; a 'Life of Emerson,' by Richard Garnett; Sir Stephen De Vere's 'The Odes of Horace'; and volume seven of Wilson's 'Tales of the Borders.'

Hachette & Cie. are about to bring out a 'Histoire de l'Art pendant la Renaissance,' by Eugène Müntz. The term art as here used is comprehensive of industries. The work will abound in biographical "monographs," and in some 500 illustrations of a high order, including a great variety of portraits and costumes. It will fill five octavo volumes of about 800 pages each, issued in weekly parts of sixteen pages at fifty centimes (or one franc when colored prints or phototypes are involved).

L'Art for May 15 still occupies itself mainly with the Salon, and this time with the sculpture, in which department, as M. Paul Leroi says, the French have nothing to fear from foreign rivalry—"in vain would one seek among the foreign exhibitors an artist without a peer"—whereas the French painters have no such preëminence to boast of. Jules Chaplain (with seventeen medallions) and Auguste Rodin (who exhibits but a single piece, a spirited portrait bust) receive highest praise; the work of a young woman, the "chastely passionate" group "Çacountala," executed by Mlle. Camille Claudel, is called "the most extraordinary novel work of the Salon." A sketch of it accompanies the text.

A new periodical, the *Revue de Famille*, has just begun its existence in Paris. It is under the direction of M. Jules Simon, with M. Louis Ulbach as assistant editor, and an attractive list of contributors, chosen from those authors who, if they do not always write unexceptionably for family reading, may at least be expected to

do so upon occasion. The name of M. Jules Simon is a sufficient guarantee for the moral elevation and the literary excellence of this new "recueil littéraire et artistique." It will be published fortnightly, in the usual large octavo form, by Émile Testard & Cie.

Petermann's Mitteilungen for May opens with an account of the "Development of the Population of the United States," by Dr. R. Lüddecke. It is accompanied by a beautifully executed map with two insets, the one showing the distribution of the negroes, the other that of the foreigners. G. Rohlfs, the veteran African traveller, argues very forcibly against the use of elephants for the purposes of exploration. The present number contains Capt. van Gèle's report of his late expedition up the Ubangi in the *En Avant*, together with a map of his route.

In the double number 135,136 of the *Zeitschrift* of the Berlin Geographical Society, scholars will find a noteworthy supplement to Yule and Nicholson's article on Sir John Mandeville in the 'Encyclopædia Britannica.' Dr. Albert Bovenschen collects a great many contemporary notices of Mandeville and his pretended book of travels, and then analyzes this work, assigning with great particularity the sources of the patchwork. His paper is entitled "Untersuchungen über Johann von Mandeville und die Quellen seiner Reisebeschreibung." In summing up, even less originality and authenticity is allowed to Mandeville than by the learned Englishmen above named. The rest of the number is devoted to the rainfall of the Iberian peninsula, with a map.

The twenty-second instalment of the 'Geschichte der Deutschen Kunst,' issuing by Grote, Berlin (New York: Westermann), is still occupied with Painting. The illustrations, after the Holbeins, L. Cranach, Beham, Schongauer, etc., are of unusual excellence and interest.

We receive from the same firm the concluding parts (80–88) of the eighth volume of the admirable 'Allgemeine Weltgeschichte.' They deal with Europe in the middle and end of the seventeenth century, the age of Louis XIV., with whose death the narrative ends. The richness of this period in historic events and personages is perfectly reflected in the illustrations, chosen with exquisite regard for the reader's edification as respects men, manners, arts, scenes, and engagements of note. In this particular, as in the authenticity of its text, the work continues to be a model.

The 'Annual Register' for 1887 (Rivingtons) has made its appearance, extending the useful series to which it belongs. We have little to remark upon it, save that we see no reason why the analysis allowed in the table of contents to current events in English history should be denied to those in foreign countries. The present volume offers a very good illustration of this defect. In the six chapters devoted to Great Britain, we may name the new rules of Parliamentary procedure, the passage of the Crimes Bill and the Land Bill, the Queen's Jubilee, the Trafalgar Square riots, the Plan of Campaign imprisonments, and yet have mentioned no event comparable in importance to President Grévy's forced resignation and the Boulangist dictator's progress, or to President Cleveland's tariff message, none of which appear in the table of contents under the bare rubrics "France" and "United States." While repairing this neglect of the table, we think it would be well to emphasize with type the *leading* events. In this, human foresight will of course sometimes be at fault, but that will not matter. There is in this issue the usual chronicle of incidents, summary reviews of literature, art, drama, science, etc., and obituary with an alphabetical index.

We have delayed too long a mention of Mr. W. W. Cook's timely legal *brochure* on 'Trusts, the Recent Combinations in Trade' (L. K. Strouse & Co.). One may get from this an intelligible notion of the different varieties of this noxious fungus, and of the legal considerations which are applicable to it. There is also a considerable citation of cases.

"Dickens vulgarized" is all we can say of the "Dickens Aquarelles" which come to us in a neat portfolio from J. W. Bouton. This set of characterizations is in illustration of the 'Pickwick Papers,' and is in no sense admirable as art or as imagination. "Stylus's" first series ought to be his last, for he has mistaken his vocation. The designs being hand-painted, the edition is limited.

Refinement cannot be predicated, either, of "*Puck's* Opper" (Keppler & Schwarzmann), a portfolio of designs by this well-known delineator of such humor as lurks in violent action and reaction, in Chinese, Jews, negroes, tramps, policemen, country boarders and rural life, horse-car amenities, delirium tremens, etc.

From the Bufford's Sons Lithographing Establishment we have a life-size head of Gen. Sheridan. The portrait is in profile, and the drawing is spirited and free.

The thirty-seventh meeting of the American Association for the Advancement of Science will be held at Cleveland August 15–21. The local secretary is Elroy M. Avery, Ph.D., 407 Superior Street.

A special session of the School of Philosophy will be held at the Hillside Chapel, in Concord, Mass., Saturday, June 16, commencing at ten A. M., and will consist of an Alcott memorial service. There will be no other session of the School the present summer.

—There can be no doubt of American participation, of a very glad and spontaneous kind, in the projected memorial to the late Mrs. Craik, author of 'John Halifax, Gentleman,' of "Philip, my King," and of so many other writings, in prose and verse, for the elevation and cheer of all who read. A marble medallion in Tewkesbury Abbey, England, is contemplated. "Tewkesbury," reads the circular before us, "was the place selected by Mrs. Craik as the home of 'John Halifax, Gentleman,' and it was the last place visited by her before her death." The church is a noble one, well kept, and well calculated for the good display of a mural monument. It is proposed to limit the American subscriptions to five dollars as a maximum, and a list on this basis has already been begun. Sums of any amount will be received by Mr. Joseph W. Harper of Harper & Bros., New York. In London, Mr. A. Macmillan, 29 Bedford Street, Covent Garden, is the recipient. The English membership of the committee having the memorial in charge is, as might have been expected, very distinguished.

—The twenty-third volume (T-Ups) of the Encyclopædia Britannica (New York: Charles Scribner's Sons; Boston: Little, Brown & Co.) is characterized by a remarkable richness of subject-matter, although, perhaps, affording less light reading than the majority of its predecessors. Among the technical articles that appeal almost wholly to the specialist are Tables (mathematical), by J. W. L. Glaisher; Thermodynamics, by Prof. P. G. Tait; Tides (twenty-eight pages), by Prof. G. H. Darwin, and Trigonometry, by E. W. Hobson. Somewhat less technically treated are the articles: Telegraph, Telephone (both by Thomas Gray), and Telescope, the last, from the pen of the astronomer David Gill, covering twenty pages. We notice that Prof. Tait, in his treatment of Thermodynamics, makes no mention—not so inexcusable in this place—of the name of Tyndall, a peculiarity, if we mistake not, which also marks the article Light (vol. xiv.), by the same authority, and that on Heat (vol. xi.), by Sir William Thomson. The reason of this omission will probably be apparent to those who are acquainted with the Thomson-Tait-Tyndall literature of some twenty-five years ago. The only zoölogical articles of significance are those on Trematoda (by Hoyle) and Tunicata, the latter a satisfactory treatment of an obscure group of animals by the well-known authority on this subject, Prof. Herdman. His conclusion that the Tunicata represent a degenerate group of the Chordata, rather than an advanced type of the Mollusca, will probably be accepted by most zoölogists. In the article Taste, by Prof. M'Kendrick, emphasis is laid upon the necessity of separating from that sense the perception of flavor, a quality which really belongs to the sense of smell. Thus, it is alleged that, blindfolded and with the nose firmly closed, we cannot distinguish between the "tastes" of an apple and an onion, or between red and white wines, a relation generally overlooked, but which received much fuller treatment at the hands of an American writer, Mr. Henry T. Finck, in an article published in the *Contemporary Review* about a year ago. Among the more important articles of general interest may be mentioned Theism and Theology (both by Prof. R. Flint), Theosophy (by Prof. Seth), Trent (Council of), Theatre, and Typography, the last covering thirty pages, and being very useful for reference by reason of its typographical illustrations. The biographical notices include among others the names of Talleyrand, Jeremy Taylor, Thackeray (by Walter H. Pollock), Thales, Thiers, Thucydides (by Prof. Jebb), and Turner. Mr. Reid of the Royal Scottish Academy, the author of the last-named notice, furnishes a less extravagant biography of the distinguished painter than many who have undertaken the task of glorification before him, yet holds that, as a water-colorist, Turner was "unquestionably the greatest master in that branch of art that ever lived." Thoreau is characterized as "one of the most strongly marked individualities of modern times."

—Among the special geographical and historical articles may be enumerated Tibet (by Gen. Walker and Terrien de Lacouperie), Troad (Prof. Jebb), Turkestan (Prince Krapotkin), Turkey, and the United States. These, as well as others not here indicated, are in part singularly defective, a weakness distinctive of this branch of literature of the 'Britannica.' We have already had occasion to point out such anomalies as that under neither "France" nor "Germany" does the name of Moltke occur. In the article Tonk-King in the present volume the whole of Paul Bert's connection with the protectorate is dismissed with a single line, wherein mention is merely made of his death. All the events of Turkish history that have occurred since the close of the Berlin Congress are disposed of in six lines, and although the kidnapping of Prince Alexander of Battenberg is referred to, no mention is made of his successor. The absence of an article on the Thirty Years' War, which is in conformity with the rules of the 'Britannica,' is all the more regrettable from the meagreness with which the subject is treated under Germany and Austria. The article United States, the joint production of Prof. Alexander Johnston (history), Prof. J. D. Whitney (geography),

and Gen. Francis A. Walker (statistics), covers just 100 pages, and is the *pièce de résistance* of the volume. Prof. Whitney, who in his portion of the article has devoted close attention to the geology, mineralogy, vegetation, and climate of our domain, apparently overlooked the faunal characteristics—a serious neglect in an extended treatment like the present one. In the pages of biography appended to the history of the United States, we notice that the date of the death of Pulaski is given as October 11, 1780, instead of 1779, and that the death of Taney is omitted. We find incidentally under "Universities" the statement that the Johns Hopkins University was founded in 1867; it was inaugurated in 1876. The minor geographical articles on American subjects are inadequate. The articles on astronomy and mathematics show perhaps as conclusively as anything else the arbitrariness of the editing. For example, one would consult "Trigonometry," content, perhaps, to ascertain what that science is, its history in outline, and the general method of development of its principles. Instead of that alone, the complex formulæ of analytic trigonometry are elucidated with the fulness of a compendious treatise. The article "Telescope" is excellent as far as it goes; but the treatment is insufficient and ill-balanced. There is no attempt to tabulate even the greater telescopes of nowadays, with their locations. As in all previous volumes, American work is signally ignored. The labors of the Clarks, *facile principes* of lens-makers, receive but the slenderest notice; while the details of some other telescope matters suggest the idea that the author's original MSS. must have been passed by some editor who, to get it into small compass, has made arbitrary excerption answer for careful condensation. "Time" and "Transit Circle" are nearer what one would expect in a general encyclopædia. We note the minutes of longitude of Paris from Greenwich misprinted 6 instead of 9. Chandler's new Almucantar, an instrument of great significance in the future of spherical astronomy, was certainly worth a half-dozen lines; but it is nowhere mentioned. All the astronomical illustrations are the muddiest of prints, and would do no credit to the pictorial department of an American daily.

—A new work by M. Alphonse Daudet is always something of an event, and the subject of his latest one adds to the usual interest. 'L'Immortel,' begun in *L'Illustration* for May 5, is the long-promised novel of which the subject is to be the French Academy and all that revolves around it and converges towards it. In the few numbers that have already reached us, the scene changes with bewildering frequency for every new group of characters introduced, and is often crowded with personages who, whether they are to be actors of the first importance or only characters of secondary or still less consequence, are all presented with that vivid reality with which M. Daudet imposes even his most extravagant creations upon his readers. That many of them—how many, we at this distance can only guess—should be skilfully varied reproductions of well-known people in Paris, will surprise no one who remembers the wonderful processions of scarcely disguised masqueraders which make the pages of 'Les Rois en Exil' and 'Le Nabab' resemble those paintings of the Italian Renaissance in which the princes and prelates and artists of the time look out from crowds of saints and angels, or troops of Oriental kings, in their very aspect as they lived. Among the many Academicians already introduced, the Immortal to whom the book owes its title is an old acquaintance of the reader of M. Daudet's 'Tartarin sur les Alpes,' the famous historian, Astier-Réhu, the *vir ineptissimus* of his German rival, Schwanthaler. Another old acquaintance, from 'Les Rois en Exil' this time, is the Princess Colette de Rosan, whose youthful widowhood is still buried in retirement with memories of her slaughtered husband, but whose lovely hair, which she sacrificed upon his grave, is growing long enough to curl becomingly around her pretty head, and whose thoughts are divided between the mausoleum of Herbert de Rosan which she is erecting, and the young architect Paul Astier, with whom she holds private consultations concerning it. Like most of M. Daudet's work, 'L'Immortel' is extremely lively, and full of the most amusing, ironical, and even comic touches; but it is bitterly and despairingly gloomy in its real spirit.

—Sybel's *Historische Zeitschrift* (vol. lx, Part 1) contains an important article on the origin of the English House of Commons by Dr. Ludwig Riess. He rejects the prevalent view—first advanced by De Lolme—that the primary object of the meetings of this body under Edward I. was to grant money. Such grants, he contends, did not become numerous or important until the reign of Edward III. The evidence afforded by the Statute Rolls, Rolls of Parliament, and contemporary chroniclers all militates against the theory that Edward I. surrendered his right to tax the commons. The celebrated "Articuli de tallagio non concedendo" of 1297 was nothing more than a proposition of the barons which the King rejected, and hence is not on the Statute Rolls. The "Confirmatio cartarum" of the same year is merely a renewal of article xii of the Magna Charta—a concession not to the commons, but to the barons and prelates only. It relates to feudal exactions ("auxilia," etc.), not to taxes that concerned the commons ("tallagia"). Edward I. created the House of Commons not as a legal instrument for the assessment of taxation, but for two wholly different purposes: (1) to facilitate local administration by enabling the commons to lay their grievances before him and his council, and thus to secure redress; (2) to aid him in executing his own measures, such as raising taxes and the like. Though Dr. Riess may err in some of his details, he presents, on the whole, a strong case, which students of this subject ought not to ignore.

—At last there is a prospect of our soon seeing in English the whole of the 'Rig-Veda.' As long ago as 1850, the late Professor H. H. Wilson of Oxford brought out the first volume of his translation of it, which was followed, in 1854 and 1857, by the second and third volumes, completing four out of the eight divisions of the entire work. In 1866, six years after the death of Professor Wilson, appeared the fourth volume, edited with great care and marked ability by Mr. E. B. Cowell, now Professor of Sanskrit in the University of Cambridge. The fifth volume, under the joint editorship of Professor Cowell and Mr. W. F. Webster, has just been published by Messrs. Trübner & Co. of London; and the sixth and concluding volume is announced as being already in the press. More than half the contents of the new volume is substantially the work of the editors; Professor Wilson having left in a most crude and fragmentary condition all of his translation that he did not live to print. "The aim of this translation," says Professor Cowell, "is to represent the traditional interpretation of the Rig-Veda, as given by Sâyana; and, consequently, but little attention is paid to the views of modern scholars. This work does not pretend to give a complete translation of the Rig-Veda, but only a faithful image of that particular phase of its interpretation which the mediæval Hindus, as represented by Sâyana, have preserved. This view is, in itself, interesting, and of an historical value; but far wider and deeper study is needed to pierce to the real meaning of these old hymns. Sâyana's commentary will always retain a value of its own, —even its mistakes are often interesting; but his explanations must not for a moment bar the progress of scholarship. We can be thankful to him for any real help; but let us not forget the debt which we owe to modern scholars, especially to those of Germany." Professor Cowell, with his usual thoroughness, has translated, in an appendix, the eleven deutero-canonical Vâlakhilya hymns, the Englishing of which would hardly have been expected from Professor Wilson, as is evident from his passing by other additions to the 'Rig-Veda' of a similar apocryphal character.

MAHAFFY'S GREEK LIFE AND THOUGHT.

Greek Life and Thought, from the Age of Alexander to the Roman Conquest. By J. P. Mahaffy. Macmillan & Co.

We may accept, with some amusement and, probably, with some allowance, the complaint of Prof. Mahaffy, that, under the influence of the taste for "pure scholarship," the period he treats of is no longer studied in England, either at schools "or by the superannuated schoolboy who holds fellowships and masterships at English colleges, and regards himself as a perfectly trained Greek scholar. A man may consider himself, and be considered by the classical English public, an adequate and even distinguished Greek professor, who has never read or even possessed a copy of Strabo, Diodorus, or Polybius, who has never seen the poems of Aratus, Callimachus, or Apollonius, and who does not know a single date in Greek history between the death of Alexander and the battle of Cynoscephalæ." In the United States, our own classical professor, we fancy, has not reached the luxury of such prejudices; in a land where he is still exposed occasionally to the scalping-knife of Mr. Charles Francis Adams and the other braves of his tribe, he cannot plead that he is fettered by traditions of "pure scholarship." But we experience the same difficulty in classical study which is doubtless felt at the English schools and universities —we are perplexed, as they are, by the abundance of our riches. While the scholar has no excuse for an antiquated eclecticism, the student is often obliged to waver between literature and history, or between different periods of history. If it is a question of periods, he prefers the fifth and fourth centuries B. C. to the third and second. If it is a question of literature, it is hard to leave out Thucydides for Polybius, or Xenophon for Arrian. It happens, moreover, that the more recent great historians, Grote and Curtius, do not reach the Alexandrian period; Finlay begins with the fall of Corinth and the final submission of Greece to the Roman power. Hence the ignorance of this important period which Prof. Mahaffy deplores, and which he has attempted to remedy by departing from the plan of his former work on Greek morals, and devoting a considerable space to the history and the literature of the age.

It is an epoch not so much of decay as of transformation. Wittingly or not, Alexander opened the door through which Greek culture and ideas wandered out into the world. Mace-

donia, Asia Minor, and Syria, and, above all, Alexandria, succeed to the old inspiration and activity; Athens becomes a place of pilgrimage and a university town; Greece proper is either largely under Macedonian power, or perpetually swept by gusts of petty warfare and pillage, except when a portion of it rises into a temporary unity and importance under the Achæan league. If we examine all this fermentation and apparent degeneracy, we are struck most of all by the vast importance and the modernness of the ideas which it evolved. We meet with repeated instances of this in the pages of Prof. Mahaffy's fresh and interesting narrative.

We see, for example, philosophy really touching life for the first time, descending out of the clouds—as has been often said—ceasing to be the intellectual exercise of a coterie of select and speculative minds, and occupying itself instead with men's conduct, in the practical systems of Zeno and Epicurus. And not only does it come down to the earth, where Socrates wished it to dwell, but it makes proselytes; it spreads far and wide among the generality of the people, and becomes to them an ethical guide of life, such as their out-worn religion could not be, and, indeed, had never professed to be. As philosophy became democratic, and the long step was making from the aristocratic Plato to the porter of Alexandria, philosophers rose in importance and consideration. They associate with kings, and are honored by cities. They are expected to offer advice, and to administer rebuke or consolation, like the clergy of the present day. Diogenes uses his customary impudence on Alexander; Callisthenes, for years, before his fall, lectures him in season and out of season; and Zeno is intrusted with the keys of that city which a century before had noticed Socrates chiefly when it decided to put him to death. In Athens the philosophers found corporations, with an endowment and a legal succession; and the Academy of Plato becomes the germ and model of the schools in all parts of Greece, and of the college or university in every civilized land.

By far the most important of all these foundations was, of course, the Museum and Library of Alexandria, without which, however important Alexandria might have been as a commercial centre, the "Alexandrian Age," so called, would never have had an existence. It was to the court of the Ptolemies, in particular, that Greek culture earliest migrated, and it is to their fostering care that we owe the large inheritance we have received from the Alexandrian Age. Prof. Mahaffy gives a full account of the constitution of the Museum, and an interesting comparison of its workings with those of English universities. Unlike the universities of Athens, it was a royal foundation, and it had the defects and the advantages which spring from royal patronage. Prof. Mahaffy, who has always in mind the questions of our own day, thinks he sees a failure in the later achievements of this school because the "Fellows" began to undertake tutorial work instead of devoting themselves to research. Be that as it may, we can hardly complain of the labors of that group of learned men who, under the second Ptolemy, "sifted the wheat from the chaff and preserved for us the masterpieces of Greek literature in carefully edited texts."

Nor were the original productions of this same coterie by any means insignificant, as every one knows who is familiar with the period, and as several chapters in this work abundantly testify. Pastoral and idyllic poetry, the romantic novel of adventure, even the Pompeian decorations on our walls, have all filtered down to us from their inventive faculty and from the art by which they were surrounded. It was their literature (not that of the much greater age of Pericles) which inspired and awakened the best of the Roman poets; it was their Cupids and Venuses and Ariadnes which descended through generations of copyists to the frescoes of Pompeii. Æschylus and Sophocles discourage imitation, while Callimachus and Apollonius Rhodius provoke it; and so Virgil and Catullus condescended to translate and to borrow from them. In our own time, Mr. Morris has done exactly what Apollonius did for his contemporaries: each has told a tale on an antique model, into which he could not avoid letting slip a feeling and a tone that are distinctly modern. Just as our own pseudo-Chaucer, "the idle singer of an empty day," as he calls himself, drifts on with melodious languor and sadness that are entirely alien to the spirit of an heroic Orpheus or Jason; so Apollonius, while imitating in epic verse the episode of Nausicaa, gives a picture of the maiden love-struggles of Medea that is utterly unhomeric and unheroic, but is to us all the more valuable for its anachronism, because it marks a great transition, a phase in the history of woman, which every student of Greek life and manners will admit to be novel and full of importance. Few read Apollonius now; but his incident, his nice analysis, his delicacy, which the latest French novelist would call prudery, still gleam through the story of Dido in the 'Æneid.' The same strain of feeling was quite as fully represented by his great rival Callimachus, librarian, poet-laureate, and literary dictator of his circle, whom one is tempted to call the Dr. Johnson of his time, save that Johnson was a worse poet and a much better man. That dexterous versifier and courtier, whose hymn to Apollo was at once a satire on his rival and an encomium on his king, wrote the tale of 'Acontius and Cydippe,' which seems to have been distinctly a romance of love and adventure, and whose pattern was imitated in the 'Daphnis and Chloe' of the fifth century A. D., in various Italian and French romances, and in the 'Arcadia' of Sir Philip Sidney.

Now, these Alexandrian cupids, this picture of feminine passion which Apollonius so delicately and skilfully painted, these love stories whose peculiarities are still faintly echoed at the present day, were all undoubtedly made for women. What causes led to this novel status of woman in life and literature—whether it was due to Dorian influence in Alexandria, or to the example of the independent position of Egyptian women before the law, or to the court influence of powerful princesses—Prof. Mahaffy does not distinctly trace. He notices, however, what no student can fail to notice, the important part played by women in Plutarch's pictures of Spartan life and manners. He does not remark that, notwithstanding all the charms of such women as Chilonis and Agesistrata, notwithstanding their high spirit, their self-sacrifice and conjugal devotion, and their enormous influence with the Spartan men, which Aristotle wonders at and Plutarch repeatedly attests, they do not seem to have softened or humanized in the least the manners of their countrymen. The monotonous string of aphorisms which Plutarch records of these ladies simply mirrored the narrow and semi-savage military ideal of Lycurgus.

The critic who serves up a poet had better be something of a poet himself; otherwise he is likely to offer a Barmecide feast. Prof. Mahaffy does not exactly do this for Theocritus; his dissection is careful and complete, but it is a little dry. He does not, like Mr. Andrew Lang in his genial appreciation, give us something of the charm and flavor of that poet so much beloved of the poets; he does not make it clear that he was a man of genius among men of talent. He even speaks of him once as a "pedant," by which he means that he was a scholar and a deliberate artist; but he might as well apply the epithet to Tennyson, and much better to Browning. We note that the second Idyll is referred to as evidence of manners in Alexandria: the scene is laid in a city by the sea—it may be Syracuse; the poem itself decides nothing. We are inclined, also, to take exception to the estimate given of the Anthology. There is artificial taste in it, as Prof. Mahaffy complains, and inferior workmanship; there is plenty of base metal and late coinage; but the best of it is small change for a good tragedy or comedy, and it is coin which bears the Greek stamp and the Greek perfection of form.

If we turn from the literature of Alexandria and glance at life and politics, we encounter various developments of a decidedly modern character. There is, in the first place, a great increase of diplomacy and arbitration. The statecraft which fills so large a place in the pages of Polybius, and which leads Prof. Mahaffy to call him the Machiavelli of his time, begins to be reflected still earlier, in so unexpected a place as the heroic poems of Apollonius. His instructive anachronism reaches the ludicrous when we find Alcinous, King of the Phæacians, engaging to extradite Medea to her father, if he ascertains that a marriage with Jason has not been consummated! Joined with this (on the whole) salutary tendency, we see springing up the idea of the balance of power and the right of armed intervention. A most instructive instance of this is the interference of the Rhodians about 220 B. C. The Byzantines had recently been levying toll on all vessels passing their port, to the great inconvenience of all Greek commerce through the Black Sea. The Rhodians, as the chief maritime power of the Mediterranean, were appealed to, and, after formal remonstrances and a brief conflict, brought the Byzantines to terms. The singular part of the affair is, that the Rhodians behave exactly as a modern European nation would under the circumstances. They take no vengeance and no advantage; they simply demand that in future no toll shall be exacted, and they restore the Byzantines to the *status quo*. Of this occurrence Prof. Mahaffy remarks:

"Here, then, was an armed intervention on behalf of trade interests carried on without hate or revenge, backed up by complicated diplomacy, and ceasing the moment the end was attained. The men who pursued this kind of politics were no longer Greeks, but citizens of the world."

It is only one step further in the same direction to find the recent fortune of our own cities, Charleston and Chicago, exactly paralleled and anticipated. Polybius narrates at length how, a few years before the Byzantine war, a great earthquake overthrew the Colossus, ruined all the docks and public buildings of Rhodes, and crippled her resources. The city at once sent embassies over the world to ask for help, and this appeal was answered from all the borders of the Mediterranean by the most lavish contributions in money, naval supplies, ships, and artillery, the value of which is reckoned to have amounted to the enormous sum of a million sterling. The issue of the catastrophe left the citizens immediately better off than they were before. Yet a few years after the Rhodians received gifts and complimentary resolutions, and their allies exhibited this enlightened sense

of the solidarity of commercial interests and this astonishing specimen of international charity, the citizens of Abydos were piteously slaughtering themselves, their wives and children, upon their own walls, in accordance with a public resolution, rather than allow their families to fall into the hands of Philip V., their besieger; and Polybius, as a stoic, deplores the perversity of Fortune which prevented them from carrying out fully so glorious a resolution. His comment and the occurrence are equally significant. So sharp are the contrasts presented by the age; so unequal and so refluent is the tidal wave of civilization!

Supreme in importance and interest, to an American, at least, is the growing fashion of leagues between the smaller States for mutual protection, whose constitution approaches very closely the modern conception of federal government. Prof. Freeman, in his 'History of Federal Government,' and in some brilliant lectures, has discussed the constitutions of these leagues, and in particular of the Achæan League, the best known, the most important historically, and the most powerful of all. Already we find in its constitution, under various titles, a President, a Cabinet, a Senate, and a principle of representative voting. Nominally, it is a democracy—every citizen votes; but really, the necessity of distant travel to the places of meeting of the Assembly practically limits the franchise to the wealthy and influential, and converts the system into "a mild and liberal aristocracy." The workings of the League, its connection with the great names of Aratus, of Philopœmen, and Polybius, and its relations with the Roman Empire, naturally occupy a large portion of the later pages of Prof. Mahaffy's volume, and call forth his liveliest interest; for no Irishman and no Englishman of the present day can neglect the most distant analogies to the question of Home Rule and English interference. This question, indeed, protrudes itself constantly from the beginning to the end of the volume, and its aspects inevitably color certain of our author's judgments. He sees in Achæan Home Rule many warnings against Irish Home Rule; he sees the sentimentalism of Titus Flamininus reflected in Mr. Gladstone; at the same time he sees clearly the Roman obtuseness and indifference to the Greeks, their fundamental want of sympathy, repeated between the English and the Irish. Far be it from us to deduce from so conflicting comparisons Mr. Mahaffy's own conclusions. He is fond of "strong governments," and distrusts democracies and popular orators. "We must judge the party of Demosthenes kindly as we judge all the other old men who have done mischief in the world." So piquant a sentence must be aimed at Mr. Gladstone, who is still alive, and old, rather than at Demosthenes, who has been so long innocuously buried.

The contact of the Jews with Hellenism at Alexandria and Antioch, in Syria, and even in Sparta, forms the subject of some curious and interesting chapters; and we are, apparently, promised a continuation of this series, to be entitled 'The Spiritual Life of Hellenism.' The task here undertaken is, in some respects, peculiar and exacting. The author who approaches it ought to have the gifts of the novelist as well as the conscience of the scholar and the historian; he should have the sympathetic imagination of the romancer, and yet deny himself romances. Dr. Ebers has been lately giving us pictures of antiquity which are neither fish, flesh, nor fowl—neither honest fact nor interesting fiction. Prof. Mahaffy's method is far more satisfactory. *Juvat integros accedere fontes.* Every English student and every intelligent reader will appreciate the opportunity given, by copious extracts from original authorities, to verify for himself the opinions and the conclusions of the author, and the amount of learned research which is here presented with so much freshness and vivacity.

CARLES'S LIFE IN COREA.

Life in Corea. By W. R. Carles, F.R.G.S. New York: Macmillan & Co. 1888.

This book is interesting as being the first in English about the once "Forbidden Land" and "Hermit Nation," by one who has been inside the country and among the people. Though shipwrecked sailors, gold prospectors, geologists, ornithologists, naval men, and missionaries have recently lived and travelled in Corea, these have not yet been provoked by either enemies or friends to write a book. Mr. Percival Lowell's 'Chôsŏn,' charming as a piece of literary work, does not describe much of the country beyond the capital and the port Fusan. The Rev. John Ross, who wrote ably upon the history and language of Corea, set foot in the land, for the first time, during the winter of 1887-8. Mr. Carles, on the contrary, besides some months' residence as British Vice-Consul at the port nearest the capital, made a journey of six weeks, the tracing of which on the map forms a rough parallelogram covering one-third of the peninsula. Besides collecting his papers furnished to journals, geographical and Government publications, he has added much material from his note-books, so that the narrative before us is the pretty full story of an eye-witness, with the out-door flavor of an active traveller, sportsman, and business man alert to trade openings.

Sir Harry Parkes, the able British Minister to Peking, made a treaty with Corea in 1882, and in the autumn of the following year prepared to go to Séoul to exchange ratifications. At the same time Mr. Carles was invited to visit the country privately. On the 8th of November, 1883, he came in sight, from shipboard, of the red granite and richly colored rocks of the west coast. The party of three Englishmen and a Dane, with Chinese servants, ponies, and the regulation assortment of dried and tinned meats, soups, and jams, succeeded, after the usual banging and bumping, in transferring themselves to a Corean boat. This "fortuitous concurrence of planks," innocent of nails, iron, or paint, dubbed even by the Chinese junk-sailors "a shoe," finally reached shore, where what seemed to be a group of penguins, with white breasts and black heads, turned out, on nearer view, to be venerable Coreans smoking long pipes. Choosing between the rough plank hovels and native mud huts of Chemulpo and the risk of being locked out of the city gates of Séoul after a twenty-six miles' ride, two of the party pushed on. Not until well within the city, and in side lanes, did they see a woman. This half of Corean humanity usually flies at the approach of foreigners, and to more than one embassy or company has the strange country appeared to contain males only. Admiral Welles's party saw not a single woman. The French missionaries, however, declare that the normal proportions of a census in other lands obtain, and that many of the females are comely in figure and beautiful in countenance. One numerous class, usually mistaken at first by newcomers for females, consists of unmarried boys and young men, who wear their hair in a long plait, like school-girls in our country. These bachelors are "boys," and, like the universal small boy, are frisky and playful, even though thirty years old, until they marry, for until wedded they are not supposed to have any sense, or an opinion worth listening to. Indeed, the bright little ragamuffins whom Mr. Carles saw in the streets and roads seemed the liveliest things in an otherwise sombre country.

"By the time that their pigtails had been tied in a married man's knot . . . their whole manner had altered, their humor had vanished, the whole of their thoughts seemed devoted to tobacco, and even the features of the face seem altered, owing to the constant strain on their facial muscles, used in supporting three feet of pipe-stem."

Another noticeable figure, the very reverse of the jolly small boy, is the mourner, dressed in hemp cloth, girt with a coarse belt, with the head completely hidden under wicker hats reaching to the shoulders. They further covered their faces with screens of hemp cloth stretched on two sticks. Etiquette allows no one to address a mourner, nor need he speak or reply to any one. This offered an obvious resource to the French missionaries who lived for years among the people, with a price set on their heads, often reading the Government proclamations adjudging them to death as soon as arrested. By means of this insulating costume, venturesome Japanese have succeeded in traversing the country, when death to all aliens found inside the provinces was the rule.

The custom of making the males keep inside the house at nights, and allowing the women to promenade the streets and take exercise at night—so striking in its contrast to our method of allowing the normal use of the night-key to gentlemen—is still kept up in Séoul. Mr. Carles thus confirms statements for making which some writers on Corea have been criticised. In the daytime the chief item of excitement on the streets was the passage of some officer who, with his outriders and foot-runners shouting to the crowd, made fuss and excitement. Perched on their stilted saddles resting on tiny stallions, the cavalrymen made up, with the saddle an intervening medium between man and beast, for the amazing diminutiveness of the native breed of horses, which are as vicious as they are lively. A peculiar species of vehicle, the monocycle, is used by the political grandee, who is half carried, half trundled along by four bearers. With leopard-skin robes, huge hat, and throat-lash of colored stones, the person and progress of a Government officer are highly imposing. After the passage of such a procession, the throng of blind men feeling their way with sticks, drunkards lying by the roadside, and bulls hidden under enormous loads of brushwood, lent an air of calm repose to the scene. Another characteristic sight was that of the women washing and whitening clothes. Soap is unknown, but none the less the men wear white clothing, and, as the outer robe must be spotless, the labor entailed upon the women is immense. The clothes are boiled three times, cleansed with lye, and washed in running water; then, all day long and through the earlier hours of the night, the women are engaged in beating the cloth on a flat board with a wooden ruler. The result is a gloss on the cloth of almost a silky nature, which lasts for a considerable time.

The above will show how good an observer of the details of life in Corea Mr. Carles is. What he especially brings to view is that which has been omitted by most writers on this land of white coats and big hats. Evidently, Corea is one of the oddest, quaintest, and most old-fashioned of countries. Even the Chinese complain that the style of writing in vogue is that of centuries ago, while the costume and coiffure are those once fashionable in China dynasties ago. A country that seems behind the times to Chinese must indeed be old. The author not only describes the capital, but takes us into the

villages, points out the fortified monasteries, the queer roadside posts carved with grotesque human heads, and colored to represent the Corean devil; the dragon-pillars in honor of literary bachelors, and the rows of tablets of iron and stone set up to commemorate good magistrates. Evidently Corea suffers under the curse of being over-governed, and the number of the official class who prey on the community goes far to explain the poverty of the country.

With a keen scent after trade openings, the author made one overland journey from west to east, and a second long and interesting trip through the northern provinces. As Mr. James (as was noted in his book on Mantchuria) saw the once "neutral strip" between China and Corea occupied and cultivated by Chinese farmers, so Mr. Carles, looking from the eastern side, saw new and flourishing Chinese towns lining the side of the Yalu River, and the Coreans seeking employment as farm laborers under Chinese landlords, even as they cross the Tumen to get under Russian masters. Such a state of things reveals a shameful rapacity on the part of the Corean magistrates, which calls for a reform such as Japan has safely achieved.

Mr. Carles found game plenty, and, though he bagged no tigers, had frequent evidences that they, as well as leopards, deer, and other wild quadrupeds, were numerous. Wolves, however, he neither saw nor heard of. His long journey was extended to very near the centre of the northern frontier, to Wen-san, a lively port almost more Japanese than Corean, and thence across country to Séoul; the details of which fill the bulk of his book. He afterwards lived officially at Chemulpo, the new port near the capital, frequently visiting the capital. He gives a correct summary of recent political history, but is not sanguine as to the future commercial possibilities of the country. His experiences in attempting to discover possibilities, and to interest the interior magistrates in the subject of commerce, were both amusing and pathetic. The absolute stolidity on the subject shown by natives in authority show how deeply they dread the impending social revolution which trade will surely bring. It seems certain that the merchant has a great missionary work to do in this commercially benighted country, and the surest way to rid the oppressed people of the incubus of bad government is to stimulate production and improve the condition of the industrial classes. At present, notwithstanding its great natural resources, paralysis rests on the country which once gave Japan scholars, artists, and artisans.

The author's style is simple, clear, and attractive. He seems scrupulously adherent to facts and things seen, and his unpretentious book is a most valuable contribution to our knowledge of a land which still piques curiosity. An excellent map, a number of illustrations by native artists, and a full-page picture of one of the colossal stone images called Mir-iok, together with good print and binding, add to the pleasures derived from an honest piece of literary workmanship. Though the three southern and richest provinces of Corea are still unexplored, and though these have most sentimental interest as being the scene of Hendrik Hamel's life and travels, we are grateful that so observing a traveller in the northern and central portions has told his tale so well.

BANCROFT'S HISTORY OF MEXICO.

History of Mexico. Vol. VI, 1861-1887. [Vol. XIV of Bancroft's Works.] By Hubert Howe Bancroft. San Francisco: The History Company. 1888.

THE strongest impression left upon the reviewer as he closes this last volume of the series is the same as that with which he rose from reading the first, on its appearance—an impression, namely, of almost envious wonder at the immense range of material which Mr. Bancroft has laid under contribution. It may have been the reviewer's fortune to have picked up some unusual bits of information at first hand; for example, he may have been a guest in a remote and almost inaccessible Mexican village, quite off the travelled routes, and have asked his host to account for the charred beams to be seen in the ceiling, hearing, in reply, a long and strange tale of the ferocities of partisan warfare and of vengeful blows struck by foreign imperialists. Scarce a house in the whole village, in fact, but showed the marks of the torch. Yet even so minute a piece of knowledge as this, come at in such a chance fashion, floats along in its place on the broad stream of Mr. Bancroft's narrative, and an incidental note (p. 258) tells the story of Zitácuaro. One may have learned from natives, speaking in a half whisper, of the peculiar terrorism exercised for so many years in Guerrero by the Alvarez family, in which the Governorship of that State seemed to be vested as a feudal possession. Juan, the father, and Diego, the son, ruled like sultans, defying the Federal arms, laughing at the decisions of the Federal courts, robbing right and left like Turks. This little *peculium*, too, Mr. Bancroft sweeps into his great net, and shows (p. 127) that he knows all about it.

As to knowledge to be derived from printed books and manuscript collections, the case is hopeless from the start. A man will not be in haste to speak of the few rare books he may happen to possess, of a specimen or two of sixteenth-century Mexican typography, in the presence of Mr. Bancroft's royal resources—literally every authority, the rarest manuscripts, *incunabula* of the Mexican press. It would be Mudie versus the British Museum. Indeed, Mr. Bancroft's material is too great. No one man can handle it. The embarrassment of riches sticks out in every chapter. Careful indexing, thorough epitomizing, impartial abstracts by twenty hands, can never, though dovetailed together with the greatest skill, be equal to the product of a single mind in which all the ore has been fused. Thus it is that a sense as of ravelled threads, of a want of a continuous and philosophical grasp of the whole, is unavoidably connected with Mr. Bancroft's volumes. But this, after all, is little more than saying that man is a mortal and finite being.

Desiring, then, only to call attention to the distinctive merits of this final volume on Mexican history, we find its greatest value in the handling of the first seven years of the period in hand. These years are given 364 pages, as against only about a hundred for the remaining twenty. This is, of course, but a natural preference shown to a distinct and completed era—the French Intervention—over the less rounded-out events of the succeeding years. Mr. Bancroft might be thought to be also exercising a natural delicacy in speaking so succinctly of living Mexican statesmen and measures still pending, were it not that he is betrayed into something very like adulation with reference to Presidents Gonzalez and Diaz. We do not dispute, however, the general accuracy of his estimates of those great figures in contemporary Mexican politics. The volume closes with seven chapters, covering 230 pages, which are summaries, such as no one but Mr. Bancroft could write, packed with information on Mexico's government, mining, manufactures, railroads, agricultural resources, ecclesiastical affairs, society, and education.

The book should be mainly judged by its success in telling the story of the Intervention, and the decision must be that the success has been very great. Until the French and Austrian archives yield their secrets, or until more Mexicans find their tongues, as they have been doing so remarkably in the past twelvemonth, we know not how more could be expected in the way of a thorough, all-sided, impartial, and penetrating treatment of this striking epoch in Mexican history. Its public and private aspects, its European and American relations, the long intrigues which led up to it, and the scheming and doubling which it covered, its political and its ecclesiastical aims and results, all leap into sharp outline under Mr. Bancroft's hand. Nowhere else is so much material brought together to bring out clearly the figure of Maximilian himself. Without any formal attempt at characterization, he stands before us in these pages, as in life, a strange mixture of worthy ambition and self-love—conceiving large projects and bringing to birth only petty results; deceived and helping to deceive others in regard to Mexico; an Emperor at a desk heaped high with proposed laws, when he should have been at the head of the army; mired and at last suffocated in Mexican officialism, incompetence, and deceit. The fact is well brought out, too, that Maximilian more than half thought of his Mexican "episode" as furnishing him a convenient stage on which to play to an audience of admiring Austrians, who had already had a taste of his art as Governor-General of Lombardy, and who might be led to devise some means of getting him over the obstacle of a single life which stood between him and the Austrian throne, if only he should well play the part in Mexico of a wise and liberal ruler. But the historical plays have their tragedy, as he found out to his surprise.

The only thing which could be called an omission to be noted in this part of the work is an absence of all reference to the highly important revelations made last summer by Gen. Escobedo in regard to the final scene at Querétaro. This, of course, simply means that the new light came too late for Mr. Bancroft's use, though it would seem as if a new edition or added page would be demanded in consequence. The doubt expressed in respect to the unaffected nature of the welcome given to the Emperor on his arrival in Mexico might have been given more color by a citation of the warrants on the Treasury, recently published by the Mexican Government, drawn to pay for the "spontaneous" festivities, triumphal arches, etc. That Bazaine made treasonable propositions to Gen. Diaz might also have been stated as something more than a suspicion, if due notice had been taken of the latter's recent allegations on this head. Again, one might wish that a little more attention had been given to the Empress Carlotta as a force in public affairs. Perhaps more striking than her social and charitable activities was her attitude as regent during some of Maximilian's absences from the capital—her dash and vigor compared to his good-natured indolence.

Several misprints disfigure the volume, and the oft-noted faults of Mr. Bancroft's style are only a little less offensive than in other books of his. On page 480 a blank half-page follows a promise to subjoin a statistical table. The index, which is to the six volumes of the series, is seriously defective in a few particulars in which we have tested it.

DAWSON'S GEOLOGICAL HISTORY OF PLANTS.

The Geological History of Plants. By Sir J. William Dawson, C.M.G. D. Appleton & Co. [International Scientific Series.]

THE author of this work has been occupied with the study of fossil plants for about half a century, and has enjoyed exceptional opportunities for acquainting himself with the forms found in this country, and more particularly in Canada. The diligence with which he has improved these advantages is sufficiently attested by his voluminous contributions which have appeared in the reports of the Geological Survey of Canada. It is not an easy matter to bring within the narrow limits of three hundred pages a connected account of the fragmentary records of fossil vegetation, especially when restricted by the additional limitations imposed by the demands of a popular exposition. It has seemed to us that the author has been embarrassed in still another way. Most naturalists look nowadays upon the existing vegetation of the globe as derived by evolution from preëxisting vegetation—the plants of earlier periods being regarded as the progenitors of the plants of the present. The author does not share in these views; nevertheless, he is impressed by what he calls "a certain rough correspondence between the order of rank of plants and the order of their appearance in time." In working out the history, he has appeared to keep in mind so prominently the exceptions which make the correspondence "rough," instead of exact, that the history itself is here and there thrown somewhat out of proportion, and the honest endeavor to guard against this has seemed to be no slight source of embarrassment.

After an introductory chapter on geological chronology and the classification of plants, the author enters on the discussion of the vegetation of the early palæozoic and its antecedent formations. On the second page of this discussion we come to this statement: "Certain forms known as *Eozoon Canadense* have been recognized in the Laurentian limestones, which indicate the presence at least of one of the lower types of marine animals." We do not find any hint in this volume, designed for popular instruction, that there is any doubt at all as to the animal nature of *Eozoon:* it seems to us as if the statement should be somewhat qualified, in order that the general reader may know that some geologists are not quite of this way of thinking. The remains of plants found in the earliest formations are obscure and highly puzzling. Of the many questions regarding them which the author takes up and treats in a candid manner, one may be of general interest. In 1859 he described a plant from Gaspé which appeared to him to present many points of resemblance to the Gymnosperms, to which our pines and yews belong, and to this plant he gave the name of Prototaxites. Other investigators, notably Carruthers, regarded the plant as far lower in the scale, being, in short, an alga or sea-weed. A reinvestigation of the subject, based on different specimens, and especially the careful examination by Prof. Penhallow of the minute structure, have caused Dawson to modify his original view in many particulars. He now holds that

"the tissues of these singular trees, which seem to have existed from the beginning of the Silurian age, and to have finally disappeared in the early Erian, are altogether distinct from any form of vegetation hitherto known, and are possibly survivors of the prototypal flora. . . . They are trees of large size, with a coaly bark and large spreading roots, having the surface of the stem smooth or irregularly ribbed, but with a nodose or jointed appearance. Internally, they show a tissue of long cylindrical tubes, traversed by a complex network of horizontal tubes thinner walled and of smaller size. The tubes are arranged in concentric zones, which, if annual rings, would in some specimens indicate an age of one hundred and fifty years."

But concerning the latter point, Penhallow says, in a note at the end of the chapter, that the plant was not truly exogenous, and the appearance of rings is independent of the causes which determine the layers of growth in exogenous plants.

The Erian, or Devonian, forests which followed were composed of gigantic ferns, scouring-rushes, and clubmosses, together with two types of plants allied to our pines. The ferns and their allies are reproduced not by seeds, but by bodies known as spores. The recognition of the immense quantities of spores which accumulated during this period, in places where they had drifted or been washed, has led to a very curious conclusion on the part of some, namely, that a certain large part of the petroleum and other inflammable substances characteristic of some of the black shales is chiefly due to the minute spores of Rhizocarps and the like, growing in Devonian times.

"The America of this Erian age consisted, during the greater part of the period, of a more or less extensive belt of land in the north, with two long tongues descending from it, one along the Appalachian line in the east, the other in the region west of the Rocky Mountains. On the seaward sides of these there were low lands covered with vegetation, while on the inland side the great interior sea, with its verdant and wooded islands, realized, though probably with shallower water, the condition of the modern archipelagoes of the Pacific."

The great coal period follows:

"When the land emerged, we find it covered with the rich flora of the coal-formation proper, in which the great tribes of the Lycopods and Cordaites attained their maxima, and the ferns were continued as before, though under new generic and specific forms. There is something very striking in this succession of a new plant world without any material advance. It is like passing in the modern world from one district to another, in which we see the same forms of life, only represented by distinct though allied species. Thus, when the voyager crosses the Atlantic from Europe to America, he meets with pines, oaks, birches, poplars, and beeches of the same genera with those he had left behind; but the species are distinct. It is something like this that meets us in our ascent into the carboniferous world of plants. Yet we know that this is a succession in time, that all our old Erian friends are dead and buried long ago, and that these are new forms lately introduced."

The question cannot be kept back—Whence and how were they introduced? At the close of that period did the curtain fall for a change of scene; or, on the contrary, was the succession of organisms practically unbroken? We find no attempt to answer this question until we reach the final chapter:

"With regard to the introduction of specific types, we have not as yet a sufficient amount of information. Even if we freely admit that ordinary specific forms, as well as mere varieties, may result from derivation, this by no means excludes the idea of primitive specific types originating in some other way. Just as the chemist, after analyzing all compounds and ascertaining all allotropic forms, arrives at length at certain elements not mutually transmutable or derivable, so the botanist and zoölogist must expect sooner or later to arrive at elementary specific types, which, if to be accounted for at all, must be explained on some principle distinct from that of derivation."

The views of many modern chemists as to the ultimate constitution and the relations of the chemical elements would appear to impair the force and even imperil the safety of the analogical illustration which the author has here employed. In any event, cannot the word *must*, which is twice used, be better replaced by *may?* And would not an admission, even if not free, that "ordinary specific forms, as well as mere varieties, may result from derivation," be helpful to the general reader for whom this book is designed? Could not the author, at the close of his paragraph on the coal-plants, have said: These new forms, lately introduced, are, in all probability, the descendants of the plants of the preceding period?

The author takes strong ground against the views of those who regard spores and sporecases as the chief source of the coal deposits. He believes, as well he may, that the cortical and woody matters of the coal plants are the most important ingredients in all the ordinary kinds. The luxuriant vegetation of the coal period he ascribes to (1) the smaller amount of land in the higher latitudes and a consequent difference of climate (Lyell), (2) a larger percentage of carbonic acid in the atmosphere, "obstructing the radiation of heat from the earth, producing almost the effect of a glass roof or conservatory extending over the whole world" (Tyndall). It is by no means certain that the amount of carbonic acid in the atmosphere then was very much larger than it is at present, although recent investigations have shown that plants are, after all, tolerant of a somewhat increased amount of this gas.

In the earlier part of the reptilian age which came next, there was a remarkable development of flowering plants, not only of the simpler gymnospermous type which had appeared in the preceding period, but of palms and some exogens. Later came the modern types of our forest trees, the same genera being represented in plane-trees, magnolias, maples, and the like, which we have as constituents of our woods today, but with differences in foliage which forbid our regarding these as species identical with ours. The oaks and poplars are not our own species, but there can be no doubt as to the genera. The relations between these precursors of our flora and the plants which now cover the continents have been brought out in an interesting manner by the late Dr. Gray in his 'Sequoia and its History,' a memoir to which Sir William Dawson frequently refers in terms of praise. But we fail to see that in this treatise he has adopted even with reservation the views as to genetic relationship which give to Dr. Gray's treatise its chief value.

Dawson's 'Geological History of Plants' is a useful book. Although it is unsatisfactory in that it presents with a certain vagueness the author's views as to the origin of species and even of "specific types," it may, nevertheless, serve as somewhat of a check on those who think that they can explain by a word the sudden irruption of variant forms at certain epochs. It is, moreover, in the main, a trustworthy, interesting, and convenient handbook for the general reader.

Correspondence of Henry Taylor. Edited by Edward Dowden. Longmans & Co.

THE ethics of publication in regard to private correspondence are sufficiently plain. There have been certain men—Charles Lamb, for instance, and Lord Byron—whose letters, from a literary point of view, are so excellent, lively, and attractive as to constitute a clear addition to the standard literature of the world. There are other letters, again, which possess a perennial interest from the stirring scenes or the remarkable society from the midst of which they were written. They add, that is, to our historical knowledge. The correspondence before us cannot plead its right to a public existence

under either of these heads. It adds nothing to the sum of human knowledge, and very little to the sum of human entertainment. That Sir Henry Taylor and his correspondents, male and female, are superior and admirable personages, we do not deny. All that we assert is, that in the letters which Professor Dowden has here published there is nothing of sufficient importance or interest to repay one for the trouble of reading them. The greater part of them are written by Sir Henry Taylor himself, and, as Professor Dowden observes in the brief preface he has prefixed to them: "This volume will interest those readers most who are best acquainted with Henry Taylor's 'Autobiography.'" Now, Sir Henry Taylor, to judge from his own account of himself, was, to use the jargon of the day, too admirably adapted to his environment for the element of conflict to come into his life. Rather his life becomes curious as showing what a very pleasant place a civilized world is to live in, if only a man knows how to do it, and is tolerably well favored by Fortune. Sir Henry Taylor was a poet of no small excellence, but one who furnishes a conspicuous exception to the dictum of Shelley, that poets "learn in suffering what they teach in song." He was a thinker, but one who could contemplate "the burden and the mystery of all this unintelligible world" as something apart from and independent of himself. He was, for many years, the chief permanent official at the London Colonial Office, but, caring little for either history or politics, he was troubled with no misgivings as to the future of the British Empire or the destiny of the human race. The world he lived in was a very good world, abundantly peopled with intellectual men and sympathetic women; good dinners and good society were to be found everywhere; wife and children and friends were his, as well as an ample portion of material prosperity; and, possessing all these things, Sir Henry was wisely content. He did not expend his energies in a fruitless search for better bread than can be made of wheat, or break out with piteous outcries because he could not find it. He took the goods the gods provided him, and asked for no other.

Such interest as there is in the 'Autobiography' arises mainly from the loving particularity in which Sir Henry draws out all the details of this sustaining self-contentment, and this profound and placid satisfaction with himself and his surroundings is the trait which characterizes nearly all his letters in this volume of his 'Correspondence.' No storms in the world outside disturb his equanimity; no inward doubts or questionings produce a ripple upon its untroubled surface. Seeing, then, what manner of man Sir Henry Taylor was, upon his own showing, it is not a little amusing to find him charging Sir Walter Scott, not without asperity, of "a defect of moral force." "Scott," he writes, "seems to be always disposed to approve of rectitude of conduct, and to acquiesce in the general rules of morality, but without any instinctive or unconquerable aversion from vice—witness his friendship for Byron." To have a feeling of kindness for Byron was, in the eyes of Sir Henry Taylor, a sin that could not be forgiven, on account of the sarcasms against Wordsworth and Southey in which Byron was in the habit of indulging. From a like cause, he writes with an excess of bitterness of Jeffrey, who, when Sir Henry was visiting Edinburgh, had been sufficiently indiscreet to show him a great deal of hospitality.

"The person," he writes to Southey, "of whom I saw most after Wilson was my Lord Jeffrey; and, though Hudson and the Major may have been better men, yet the Lord Rector was worth seeing, in order to understand by what small springs mankind may be moved from time to time. There came from him, with a sort of dribbling fluency, the very mincemeat of small talk, with just such a seasoning of cleverness as might serve to give it an air of pretension. . . . When one looks at the clever little worldling, and remembers that for twenty years he was enabled to keep the sunshine from the cottage-door of a man of genius, one cannot but wonder how so small a man could cast so large a shadow."

The scattered notices which occur in these letters from "the man of genius" are, perhaps, the best things in them. The 'Correspondence,' indeed, opens with a letter from Wordsworth to Taylor, on the subject of Byron's plagiarisms, which it was hardly kind of Sir Henry to have left for publication. Passing this by, the following is Taylor's description of the great poet in 1835, Wordsworth being at the time a visitor in his house:

"This old philosopher is one of the most extraordinary human phenomena that one could have in the house. He has the simplicity and helplessness of a child in regard to the little transactions of life; and whilst he is being directed and dealt with in regard to them, he keeps tumbling out the highest and deepest thoughts that the mind of man can reach, in a stream of discourse which is so oddly broken by the little hitches and interruptions of common life, that we admire and laugh at him by turns. Everything that comes into his mind comes out—weakness or strength, affections or vanities—so that, if ever an opportunity was afforded of seeing a human being through and through, we have it in the person of this 'old man eloquent.' He is very happy with us, and very social with everybody, and we have a variety of people to meet him every day at breakfast and dinner."

This, again, regarding Carlyle, strikes us as very good and true:

"Carlyle seems in better health than usual and talks away lustily, and there is always something to take one's attention in his talk, and often a sort of charm in it; but less instructive talk I never listened to from any man who had read and attempted to think. His opinions are the most groundless and senseless opinions it is possible to utter; or, rather, they are not opinions, for he will utter the most opposite and contradictory and incompatible opinions in the most dogmatic and violent language in the course of half an hour. The real truth is, that they are not opinions, but 'shams.' And I think it is the great desire to have opinions, and the incapacity to form them, which keeps his mind in a constant struggle, and gives it over to every kind of extravagance. It is wonderful that a man of no opinions should exercise such an influence in the world as he appears to do; but I suppose it is an influence of concussion and subversion rather than any other."

There are other notices of eminent men up and down these letters—Coleridge, John Stuart Mill, Alfred Tennyson, and others—which are interesting enough; but five-sixths of the 'Correspondence,' we repeat, ought not to have been published—not because there is anything positively objectionable in it, but because it is negative and characterless. What harm, it may be asked, is done by the publication of a book even if it be profitable for nothing? No harm, we reply, if it be not ushered into the world under the shelter of an attractive name. But if, as in the present instance, it comes before us weighted with the double authority of Sir Henry Taylor and Professor Dowden, it does actually constrain thinking men to spend their time in reading it; and when one remembers the vast expenditure of valuable time in unprofitable reading that we cannot escape from, to be thus constrained without good cause is a not insignificant calamity. Finally, be the book intrinsically worth much or little, it belongs to a class which ought never to appear without an index; and yet it has none. Should not the publishers as well as the editor be held responsible for this omission?

A Library of American Literature, from the Earliest Settlement to the Present Time. Compiled and edited by Edmund Clarence Stedman and Ellen Mackay Hutchinson. In ten volumes. Vols. 1-3. Charles L. Webster & Co.

THREE periods are covered by the first issues of this 'Library'—the Early Colonial, the Later Colonial, and the Revolutionary, ending in 1787. The literature of the Republic will fill the seven remaining volumes; the last five will deal with the last half century, and the last two will embrace the years since the outbreak of the civil war. The undertaking seems to us one of much merit, both in design and in execution. Inevitably in the beginning the historical interest predominates over the literary and rhetorical; and perhaps the highest value of the compilation as a whole will consist in its exhibition of the development of American culture, or civilization, in the broadest sense of the term. Proceeding from Capt. John Smith, we observe in the first volume few important sources for early colonial history that have been overlooked or purposely disregarded. We should name Lechford's 'Plain Dealing' as one of these, and John Clarke's 'Ill News from New England'; the latter particularly because of its relation to a famous episode in the religious intolerance of the Bay Colony, and because the Quakers have been so well cared for by the compilers. Clarke was a Baptist, and, with Obadiah Holmes, was a concrete example of the persecution which Roger Williams here denounces in very vague terms, not likely to impress themselves on the memory. In the case of the Quakers, we are given not only the equally vague Scriptural warnings and censure of oppressors, but a specific enumeration of cruel inflictions, as made in the protest and appeal to Charles II. by ear-clipt Rouse and Copeland, Southwick, and other suffering New England members of the denomination. The body of poetry in the first volume is naturally as small as it is poor in quality. Portions of the Bay Psalm Book and the whole of Peter Folger's "Homely Plea for Toleration" are the chief instances.

Theology and superstition are, by extension, the leading lines of the second volume. To the Cambridge Platform succeeds the Saybrook Platform; to the harrying of heretics, the harrying of the witches. These aspects are summed up in Cotton Mather, who is well represented—more so than any author, not excepting Jonathan Edwards. One might have liked more of Samuel Sewall, but the three pieces quoted are certainly characteristic—his confession concerning his error in the witchcraft trials, his courtship of Madam Winthrop, and his 'Selling of Joseph.' With this anti-slavery tract (complete except for the authorities cited in Latin at the end), the compilers begin a series of excerpts bearing on the great evil in the constitution of American society. Anthony Benezet's 'Caution and Warning to Great Britain and her Colonies' against the slave trade follows after an interval of sixty-six years; but of this, of course, only a fragment can be given.

In the third volume John Woolman appears with his testimonies against slavery, wherein his vision was "by that which is immutable." Samuel Hopkins seconds him in Rhode Island. From Franklin nothing is quoted on this subject, nor perhaps was anything available; but Jefferson might have been drawn upon, and, well chosen as are the extracts from his correspondence, his 'Notes on Virginia' deserved, for many reasons, to be exemplified in this collection. His opinion of the capacity and view

of the future of the negro race are landmarks of the sentiment of his generation, and will long have a curious interest. John Jay's account of the way in which slavery was fastened upon the United States is cited, as is James Madison's approval of colonization. We regret that some mediocre verse of St. George Tucker's was preferred to extracts from his most honorable 'Dissertation on Slavery.' Phillis Wheatley's performances are admitted among the still feeble poetical products of the period 1765-1787; and we hope that her color will be represented further on in extracts from David Walker's 'Appeal,' a black man's response to Jefferson's 'Notes' more fiery than Banneker's. In this third volume we remark also the biographical apparatus—Gov. Hutchinson on the character and rule of Gov. Burnet, Dr. Hopkins's admonition to Aaron Burr, John Adams's character of Franklin, Jefferson's anecdote of Franklin and portraits of Hamilton and Adams, Benjamin Rush on the life of Benezet, etc., not omitting mention of Aaron Cleveland's poem on "The Family Blood," which is just now a national concern:

> "If found in Cleveland's blood a trait
> To aid you in affairs of state. . . .
>
> Then rule my head—and keep my heart
> From folly, weakness, wit apart:
> With all such gifts I glad dispense,
> But only leave me—*common sense.*"

The only state paper is Washington's Farewell Address, unabridged and with due notice of the aid of Hamilton and Jay.

It were easy to descant at still greater length on this 'Library,' and we have conveyed but an inadequate idea of it, yet enough, we trust, to indicate its worth to the student, and its attraction for the average reader. It would certainly enrich any domestic library, and in all schools of the higher grade it should be on hand as an adjunct in teaching both history and literature, and as an aid in rhetorical exercise, whether reading, declamation, or composition. The typography is excellent, and we have no error to point out, except that on p. 185 of vol. 3 a figure has been dropped from the date of Benjamin Church's death—177[6]. In vol. 2, p. 129, Cotton Mather's story of Margaret Rule is ascribed to Calef (*i. e.*, to 'More Wonders of the Invisible World'). We wish the editors would abandon in subsequent volumes the exasperating "[From the Same]"—a lazy finger-post, entailing much needless labor on the searcher. There are portraits in all these volumes, and they add something to the value of the text.

L'Homme selon le Transformisme. Par Arthur Vianna de Lima. Paris: Félix Alcan. 1888.

This book forms part of a library of contemporaneous philosophy, in which are works by many of the ablest investigators in this field. The writer, a young Brazilian, author of an 'Exposé Sommaire des Théories Transformistes de Lamarck, Darwin, et Haeckel' (Paris, 1886), is not, however, identified with research in the broad field of biology or the narrower one of anthropology. His subject, the derivation of the human species, is treated in the usual order, commencing with the bodily structure, and ending with the intellectual and spiritual nature. It is considered not as an unsolved, but as a fully solved problem, and the author states his thesis in the introduction with great emphasis, viz., that man, considered in every way, bodily, mentally, and spiritually, is simply a member of the animal series. It is, perhaps, natural that, starting with this settled conviction, and not apparently having had the severe discipline of original investigation, the author should select for his book the facts and conclusions which strongly support and confirm the truth of his thesis, and that where the admirably arranged and sifted material to be found in Darwin's books was not sufficiently strong, he should adopt the more confident and radical statements of Haeckel and other writers. On the whole, however, the first part of the book, treating of man's zoölogical position and bodily structure, represents fairly well existing knowledge, but it cannot be said that new light has been added, or that the light already possessed has been concentrated on the salient points in such a way as to enable the reader to distinguish easily the important features in the great and often detailed mass of facts and hypotheses presented.

The second part of the book is devoted to a consideration of the mental and spiritual nature, and is far less satisfactory than the first. The author states without reserve that the religious sentiments are not inherent in human beings, and cites in support of this the testimony of many persons that there are, even at the present day, whole tribes with absolutely no religious ideas and no notion of the supernatural or mysterious (p. 175). A little further on, however, to show that the germ of religion is to be found in the sense of the mysterious displayed by many animals, he quotes the case related by Darwin of the dog that was frightened at the movement of an umbrella by the wind when no one was near. As the book contains no hint of the degeneration or the "fall of man," the critical student would have to conclude from the above that part of the human race had developed from an ancestor having a sense of the mysterious, and, therefore, according to the author, the germs, at least, of religion, and that another part had descended from one having no such sense, and, since becoming human, had not acquired it. A great deal is said concerning the sexual characters and passions of men and animals, and, finally, several pages are given up to the revolting vices of human beings. What the bearing on the evolution of man this recital is intended to have it is not easy to see, for the lower animals are entirely free from most of the traits mentioned. If the possession of peculiar vices is to be taken as a serious evolutionary argument, it will be necessary to understand quite literally the expression, "descent of man."

Actual misstatements are too frequent throughout the entire book. For example, it is stated that in man and all the other primates the eyelids, except for the eyelashes, are entirely devoid of hair, that typhoid fever is a disease common to men and monkeys, and that the primates alone possess a discoidal placenta. The author is very fond of using the expressions "absolute, demonstrated," etc., and perhaps the worst feature of the book is the frequent recurrence of unqualified or exaggerated statements respecting matters really far from satisfactorily determined.

Whatever may have been the belief or the insight of the great Linnæus with reference to the origin of the human race, he placed man, in his classification, in the same group as the apes and monkeys, calling all *primates*. It is, however, since the time of Lamarck, but more especially since the whole thinking world was stirred by Darwin's assertion that by *natural selection* "light would be thrown on the origin of man and his history," that the greatest activity has been shown in trying to determine the relationship between the animals themselves, and wherein is their point of contact with the human race. The classical work of Huxley in determining the structural relations of man's body to that of the lower animals, especially the anthropoid apes, and his conclusion that man's structure, even to minute details, is like theirs, has received the most abundant confirmation by later investigators. Brilliant efforts have also been made in attempting to find prototypes of all man's mental and spiritual activities in the "beasts of the field"; but the final settlement of this problem remains for the future. As, therefore, the human body is undoubtedly similar in structure to that of the lower animals, thinking men, creationists as well as evolutionists, are logically driven to the belief that the origin of man's body is inseparably connected with that of the animals; and whenever it is as clearly shown that all the intellectual and spiritual powers of the human mind differ only in degree from those of the lower animals, then the same logical necessity will establish the belief that the origin of the entire man was linked inseparably with that of the animals.

As all books on the descent of man must inevitably be compared with Darwin's, this may be so compared in a word by saying that in Darwin the sole aim seems to be to arrive at the truth, in this to establish a thesis.

Pictures of East Anglian Life. By. P. H. Emerson. London: Sampson Low.

This is a delightful book. By means of thirty-two large photogravures and fifteen smaller reproductions of photographs, Mr. Emerson has admirably illustrated his observations on the life and peculiarities of the inhabitants of the eastern counties of England. He tells us that all the local information has been taken direct from the field and the peasants, from the sea and the fisher-folk, and he offers it "fresh and redolent with newly-turned earth and newly-blown flowers, with sea-breezes and sea-tangle." And, indeed, no one can study the illustrations and read the accompanying text without becoming imbued with the author's enthusiasm, and without feeling that he has gained an entirely new insight into the character and surroundings of the English peasant. So artistic are the illustrations, with their Corot-like softness of outline, that in future no book that deals with an unfamiliar country will seem complete without such aids; and it is pleasant to contemplate that, as the photographic art improves, the scenic delights of travel will constantly be made clearer to the minds of those who must perforce stay at home. There should be, and no doubt there will be, books such as this about every corner of the globe, and Mr. Emerson is to be thanked for setting the example.

The keynote of the artistic side of the book is to be found in the fact that the author is a worshipper of Nature. He believes the old Greeks to have been the happiest race that has yet lived upon the earth, because they thoroughly appreciated the beautiful; and he is deeply impressed with the shortcomings of the modern artist in his efforts to reproduce the glories of Nature. He says:

> "The poet, the artist, the naturalist, are truly they who drink life to the brim, yet often their hearts are sad because of the exquisite beauties they see and are silent upon. . . . The music of the breeze, as it sighs, rustles, and breathes in the gorse brakes, the play of light on the gnarled stems, the water-beads after an April shower, now clear as glass, now shining like the sun as the light is reflected from them, who can tell of these? . . . Who shall describe what none can paint—the unsurpassed splendor of the golden gorse? . . . We sympathize with Linnæus, of whom it is written that he fell on his knees when he first saw an English common covered with gorse in full bloom. . . . Form and atmosphere and tone we can now accurately and subtly render by the help of the sun itself, but, alas! not so with

color. The nearer we get to Nature, the sweeter will be our lives, and never shall we attain to the true secret of happiness until we identify ourselves as a part of Nature."

Mr. Emerson loves not the conventionalities of the painter's art, but he evidently has an abiding faith that photography will some day solve the problem of color, and that then Art will be infinitely nearer to Nature, and therefore infinitely truer than it is at present.

In regard to the peasantry and fishermen, Mr. Emerson finds that their ruling passion is avarice, and that they are envious and unwilling to give information to one another. He states "on good authority" that they would rather see a horse kill a man than tell him how to manage it! It is interesting to note that they constantly make use of such words as "cute," "tarnation," "guess," "riled," which the uninformed Englishman sets down without hesitation as pure Americanisms. They have many excellent qualities, and, judging from some of the anecdotes in this book, are not devoid of a sense of humor. Take, for instance, this reply of a hungry lad, one of a large family, to the childless rector who had endeavored to comfort him by remarking that as God sends the children he will also provide food for them: "Thet's all wery wal, passon, for yow to tark so, for all tha food go to yours, and all tha babes to ours." Here, too, is a definition of the gentleman fisherman which certainly applies to a great many lovers of the gentle craft: "The gents who went fishin' was them as liked to get away into the country, and didn't want to appear kind o' idle; so they brought rods and tackle and all that with them." The life of the East Anglian peasant seems to be an uncommonly hard one. He lives in a miserable, unwholesome cottage, works from morn till night with "endless, hopeless regularity," and with great difficulty keeps the wolf from the door. Nor is the lot of the fisherman any easier than that of the agricultural laborer. No wonder, therefore, that Mr. Emerson strongly advises them to emigrate to milder climates and more fruitful soils; and, with all due deference to the Laureate and the cultured classes to whom alone his well-known lines apply, comes to the conclusion that, "for the starving peasant of Europe, better perhaps a decade of Otaheite than a cycle of Great Britain." He believes that English farming will improve as the virgin soil of America decreases, and as more labor and capital are required on this side of the Atlantic to produce grain; but if this is the only hope of the English farmer, his regeneration is surely relegated to the remote future.

Mr. Emerson describes in strong language the many evils that result from the effort on the part of the landlord class to enforce the mediæval game laws, and his sympathies are evidently enlisted on the side of the poacher. He shows by means of the evidence collected by a Parliamentary committee that game preserves occasion a serious destruction of agricultural products, and he claims that the upper classes have no real love of sport in the true sense of the word, and only preserve game in order to increase their incomes by becoming game-dealers on a large scale. His indignation is also aroused by the encroachments which the landowners are constantly making on the *broads* and other public waters, with a view to fish preserving; and he charges, in addition to all this selfishness, that the upper classes, instead of doing anything to improve the condition of the laborers, are deliberately and strongly opposed to any such improvement.

It seems almost ungracious to find fault with a book which is certain to give so much pleasure, but it must be said, nevertheless, that it contains a number of grammatical errors. The table of errata is typical of this kind of carelessness, and is in itself a curiosity. It contains but two corrections, and they are both wrong! At page 45 the reader is asked to substitute "sargossic" for "saragossic," though the word should be sargassic; and at pages 55, 56, he is told to read "fera naturæ" instead of "feræ naturæ," and is left to wonder why. These, however, are comparatively small matters, and would call for no special remark if the book, as a whole, were not one of unusual excellence.

BOOKS OF THE WEEK.

Allen, W. B. Kelp: A Story of the Isles of Shoals. Boston: D. Lothrop & Co. $1.

Taxation in American States and Cities.

By Richard T. Ely, Ph.D., Associate Professor at Johns Hopkins University, Member of Maryland Tax Commission, author of 'The Labor Movement in America,' etc., etc. 12mo, $1.75.

Professor Ely has written the first broad and critical treatise upon the manifold systems of taxation that obtain in our chief cities and States. It is a work of immense research and presents in a masterly manner the whole complex subject of taxation as well as the inconsistencies which prevail in parts of this country. The volume is made especially valuable by numerous and carefully compiled tables showing the various methods of levying taxes and the comparative results in every State of the Union, and while it will not fail to interest every taxpayer, it will appeal especially to tax-assessers, lawyers, legislators, and all engaged in public affairs.

Power and Liberty.

By Count L. N. Tolstoi. Translated from the French by Huntington Smith. 12mo, 75 cents.

"Man is free in his motives, conditioned in his actions." Such is Count Tolstoi's explanation of the paradox of Fate and Free Will. 'Power and Liberty' is a sequel to the recent treatise on 'Napoleon and the Russian Campaign,' which awakened such interest in all students of history. It is an attempt to rescue the study of history from the hands of those who devote their energies in searching for unknowable causes, and to bring it back to the simple and mighty laws that govern the life of humanity.

The Nation.

NEW YORK, THURSDAY, JUNE 21, 1888.

The Week.

As we go to press, the Republican Convention at Chicago is getting into working order. The speech of Mr. Thurston, the temporary Chairman of the Convention, throws light upon a dark place. The very decided stand he has taken against the nomination of a candidate who has declared that he would not accept it, proves that there was danger of Mr. Blaine's nomination after all, and that this danger was such as to warrant the presiding officer in making it the chief subject of his opening address. When we remember that Mr. Thurston was selected for the temporary Chairmanship over a Blaine man from California only by the casting vote of Mr. Jones, the head of the National Committee, it becomes plain that the strength of the Blaine-or-Busters in the Convention is formidable.

The *Tribune* has been publishing a number of interesting letters from random writers on the Republican nomination for the Presidency, which go far to supply the place of good editorial matter. The most significant of the series is the letter of Judge West of Ohio, sometimes called the "blind man eloquent," but more fittingly known as the blind leader of the blind, on account of his passionate prediction in the Convention of 1884 that Blaine would sweep the country if nominated. Mr. West confirms the statement, obscurely made by Murat Halstead two or three times, that Sherman sent word to Blaine before the Toledo Convention of last year that if Blaine were to be a candidate this year, Sherman would not stand in his way; and that the Florence letter was the answer to Mr. Sherman's communication. Judge West not only confirms this statement, but says that Halstead himself was the bearer of the communication. The fine logical deduction which the blind man eloquent draws from these premises is, that Sherman and everybody else ought to withdraw in favor of Blaine.

What may be called an inside history of the famous "Blaine Belshazzar Feast" at Delmonico's on the eve of the election in 1884, has been furnished to the Chicago press by "Steve" Elkins, who gave out the following statement there on Monday in reply to an assertion which had been made in the Chicago *Tribune*:

"Mr. S. B. Elkins has been much annoyed by a statement made in the *Tribune* yesterday, which charged him with responsibility for what is known in political history as 'Belshazzar's Feast,' a dinner given a few days before the Presidential election of 1884 by Cyrus Field, Jay Gould, and a number of New York millionaires. From a political point of view the dinner was an unfortunate event, because it was charged that Mr. Blaine was hand and glove with the money king of Wall Street. Mr. Elkins saw it would be unwise to have Mr. Blaine attend such a dinner, and he not only did all that he could to prevent Mr. Blaine's presence, but refused to go himself, thereby incurring Mr. Field's displeasure to such an extent that they did not speak for many weeks. These are facts well known to all persons who were in the Republican national headquarters in 1884."

While the dinner was, as Mr. Elkins says, "an unfortunate event from a political point of view," we have always understood that its greatest disappointment consisted in its failure from a financial point of view, campaign contributions from the millionaires present being much less generous than had been expected. Mr. Elkins's statement bears evidence that there has been an active search for a scapegoat for that feast going on in the party since the election four years ago.

There was a lively scene in the House of Representatives last week when Mr. Rayner of Maryland read the appeal for funds which James P. Foster, President of the Republican League of the United States, sent out confidentially a few weeks ago, a copy of which was published at the time. It was in this appeal that Mr. Foster quoted the words of a United States Senator in which the desire was expressed to put the "manufacturers of Pennsylvania under the fire and fry all the fat out of them," because they had refused to contribute to the campaign fund. We have tried in vain to satisfy our conjecture that this Senator was either Morrill or Edmunds, our inference from Foster's description of him being that he must "hail" from Vermont. When Mr. Rayner read the circular, Mr. Grout of Vermont said the Senator in question was not a Vermont man, and another member expressed a belief that a Kansas Senator was the person quoted. Mr. Grout also said that the charge that Edmunds or Morrill said it had been contradicted, but he did not say when or by whom, and we very much wish that he had. Will he kindly furnish us with the particulars for publication? There has been a dead silence on the subject of Foster's great appeal in all the Republican localities with which we have any means of communication.

Everybody at all familiar with Western sentiment knows that it is bitterly hostile to the railways. As one Republican editor said on Thursday: "The Western people are insane on the railroad question." Mr. Depew is, in our opinion, an innocent victim of this insanity, but that he would be a victim of it was so obvious from the outset of the talk about him as a candidate that we have never been able to understand how either he or his friends could for a moment look upon him seriously as a candidate. At the same time we are free to say that the Western hatred and fear of him as a monopolist who is a menace to the country, is entirely misplaced. The monopolists who are threatening the country's prosperity and safety are not the railway presidents, but the protected manufacturers and protected Trusts, and it is against them rather than against the railways that the popular wrath of the whole country should be directed. The railways are not helped by the tariff, but, on the contrary, are obliged to pay a heavy bonus on every steel rail they use, and are sufferers in common with the masses of the people in struggling along under the burdens which the war tariff places upon them.

The Richmond *Dispatch*, a Democratic paper which has forgotten the traditions of its party in the matter of centralization, laments the fact that the Blair bill, which it has supported, was "overlooked" by the Committee which constructed the St. Louis platform. We have serious doubts whether the measure was overlooked, for its friends never fail to push it upon attention on all possible occasions. The fact probably is, that the Committee on Resolutions recognized the absurdity of endorsing an un-Democratic measure, which the candidate nominated for Vice-President is committed to defeat if it should ever be left to his casting vote in the Senate, and which the candidate nominated for President is bound to veto if it should ever come to him from Congress. The veto of the Texas Seed Bill by Mr. Cleveland a year ago last winter insured the final defeat of the Blair bill, and it would have been an amazing exhibition of stultification if the St. Louis Convention had endorsed the moribund scheme. It is now an interesting question whether the Republican Convention will lend any countenance to a measure which many good Republicans have denounced as unconstitutional.

The speeches made at the dinner of the Reform Club on Saturday evening were elevated in tone, earnest in purpose, and full of hope and confidence as to the great campaign now beginning. One thing was made clear by Mr. Mills, and that is that the Tariff Bill now pending is *going to pass the House*, no matter how much time it takes. The Democratic party is pledged to this, and is going to redeem the pledge if it takes all summer, This was a cheering promise, not so much for what the bill itself contains, as for the assurance that there is no longer any hesitation or doubt among the majority as to the duties and necessities imposed upon them. The duty is to reduce the surplus. The necessity is to compel the Republicans to show their hand, and thus make an issue that has some meaning. The lessening of the revenue is something that all are agreed about; but so long as the Republicans can shout "protection" without telling what protection means, they will have the same advantage which they had in Oregon—the advantage of appearing to favor American industry as a whole as against foreign industry. But this false issue cannot be preserved after they shall have told us by their votes in the Senate what their method of reducing the surplus is. If they are for free whiskey as an alternative to *any* tariff reduction, let them say so. If they are in favor of any tariff re-

duction at all, we shall at least have the chance to see what foreign industries they favor at the expense of American industries, and in what respect those foreign industries are better than the ones which they tell us the Mills bill favors.

Protection has been running mad in the House ever since the tariff debate began on the separate items, but it ran madder on Wednesday week than ever before. For example, a paragraph of the Mills bill was taken up which puts jute-spinning and jute-weaving machinery on the free list. Here the venerable Mr. Kelley came out strong. He had heard it said on this floor that jute machinery was not made in this country. He did not credit that statement. He had good reason to believe that it was made at Bridesburg, Pa. At all events he was sure that it was made somewhere in the New England States, because he had met a man from Boston, Mr. William Whitman, who had told him so. But even without Mr. Whitman's testimony it was ridiculous to suppose that it could not be made here, and if it was not made here, it ought to be. There was no difference in principle between jute machinery and cotton or woollen machinery. The only difference was in detail, and therefore the customs officers would not know a jute machine from a cotton machine when it was imported, and might let in a cotton machine free of duty by mistake, to the detriment of American industry. Mr. Breckinridge of Arkansas questioned Mr. Kelley in order to find out what he knew specifically and precisely—whether jute machines were or were not made in this country—and found out that Mr. Kelley knew nothing at all except what Mr. Whitman had told him. Further cross-examination of Kelley showed that Mr. Whitman was not in the jute-spinning business, and that his assertion was probably altogether conjectural, like Kelley's own. Then Mr. Breckinridge stated that the Committee of Ways and Means had had before them the leading jute-spinners of the country from Brooklyn, Boston, St. Louis, and Charleston, and that "the testimony of all these gentlemen was that not a particle of this machinery is made in this country." So far was it from being true that cotton and woollen machinery were substantially the same as jute machinery, in point of fact the different kinds of jute products required different kinds of machinery. For example, the machines used for making burlaps could not be used for making bagging.

The House proceeded to the tax on tin plates. Here again is an article not produced in this country, although protected by a duty of 35 per cent. ad valorem. The tax yields $6,000,000 of the detested surplus. One would suppose that there would be no opposition to the repeal of such a tax. On the contrary, the opposition was of the most stubborn kind, and predictions were made by Mr. Dalzell of Pennsylvania and Mr. J. D. Taylor of Ohio of great disasters to American industry if tin plates were admitted free? Why? Because the sheet-iron makers would lose a part of their trade. It was said that sheet iron was used for the roofing and siding of houses to some extent, and, if people could get tin at a reduction of 35 per cent., they would prefer it. How, then, would your sheet-iron workers get a living? Moreover, it was contended that, although tin plates were not made in this country now, they might be made here some time if the tax were retained, and especially if it were increased, as it ought to be. In answer to the argument that 60,000,000 consumers of tinware had some rights, it was stated by Mr. Butterworth that the consumers would never derive any benefit from the repeal of the duty, because it would all be absorbed by the middlemen—as though the middlemen were not American citizens, but some kind of "blarsted foreigners." Mr. Randall was very severe on the Standard Oil Company as a large consumer of tin plate, and seemed to think that it ought to be severely mulcted, forgetful, for once, of the fact that the money made by rich corporations descends in a grateful shower on their workingmen. The Standard Oil Company furnishes employment to more workmen than all the steel-rail mills in the country—and much steadier employment, we may add. Why these workmen should be singled out by Mr. Randall for punishment we are at a loss to understand. Although we have no tin-plate workers in this country, England has 50,000 such, and this fact was a great grievance to Mr. Joseph D. Taylor, who said: "We are feeding and clothing this great army of men under the British flag." It was Mr. Taylor's idea either that these English tin-plate workers were supported at our expense, giving us nothing in return, or that they were giving us tin plates gratis, and asking nothing from us in return; for if we pay for the tin plates, we pay with the products of our labor, and consequently as full employment is furnished to the workmen who supply these products as would be furnished if they were making tin plates.

There used to be a good deal of discussion of the question whether or not Mr. Cleveland was stronger than his party, but it appears to be decided in the affirmative by the testimony of Republicans as well as Democrats. "It would seem now that almost any Democrat might be elected President," says the Richmond *Dispatch*, a leading Democratic paper of Virginia; "but if we had taken the risk of nominating any other man than Cleveland, we should probably learn that he is, as has often been said, stronger than his party." The Atlanta *Constitution*, the leading Democratic paper of Georgia, is equally frank. "It is Cleveland that is stronger than party or platform," says the *Constitution*, adding that he is "the sturdiest and safest and best leader either party has had since Abraham Lincoln led the Republican party to its first victory." Republican testimony to the same effect is also forthcoming. "Mr. Cleveland is stronger than his party," says Mr. A. W. Tenney, ex-District Attorney and a prominent Republican politician in this State, "and the Republicans must match him with a candidate stronger than his party, or they are beaten."

The brief press despatch which last week announced the appointment of three postmasters in New York State by the President was not likely to arrest attention or attract remark, and yet it was not without significance. It means that well along in the fourth year of a Democratic President there are still Republican postmasters in important offices, who have served out under a President of the opposite party the greater part of the term for which they were appointed by a Republican President. It is a thing unknown before, since the spoils system was introduced by Jackson, for lucrative offices to be left by an incoming administration in the hands of men politically opposed to it for one, two, and even three years; but this is what has happened under Cleveland in the cases of three-fourths of the Presidential postoffices, which, as everybody knows, are the most important and desirable ones. The serious lapses of the Administration in the matter of civil-service reform during the last six months must not obscure the honorable record which Mr. Cleveland made by refusing to allow a "clean sweep," and by permitting a large proportion of the Federal officers with a four years' term to serve out that term.

There is a visible anxiety among the Republican managers in this State for the President's friends to make the mistake of acquiescing in Gov. Hill's desire for a renomination. They are all declaring that a "deal" has been arranged between the President and the Governor, the condition of which is that the latter shall be renominated. It is extremely doubtful if there is any basis for these reports. The President's friends in the Democratic party of this State are shrewd enough to see that Hill's candidacy this year would be a serious handicap for Cleveland to carry. The dislike of Hill is not only hearty and unanimous among the Independents, but it prevails largely among Democrats, the respectable portion of whom are disgusted with his trickery and "peanut politics." He would be an extremely weak candidate, also, because of the open antagonism of the labor parties, all factions of which are bitterly incensed against him for his veto of the Ballot-Reform Bill. If he were to run, and there were danger of his defeat, he would not hesitate for a moment to attempt a "deal" with the Republicans by which he could be elected at the expense of Cleveland.

The Chicago papers publish an interesting correspondence between Senator Edmunds and Mr. Melville W. Fuller, the President's nominee for Chief Justice. Under date of June 11 Mr. Edmunds wrote Mr. Fuller that he had been charged, in a communication filed with the Judiciary Committee, "the name of the writer of which the Senate rules forbid us to disclose," with having been instrumental in obtaining from the Board of the West Side Park Commissioners of

Chicago $103,000 for land worth but $30,000, and taking for himself or a clerk in his office $5,000 or $10,000 of the amount, and with having requested Mr. King, one of the attorneys in the case, to suppress or leave out part of a record. Mr. Edmunds informed Mr. Fuller that "any statement he had to make in reference to the matter the Committee would be glad to receive." Under date of June 13 Mr. Fuller wrote Mr. Edmunds as follows: "While assuring the Committee that I intend no disrepect to them, I cannot consent to reply to anonymous aspersions of the character referred to in yours of the 11th. With your permission, I will publish your letter, with this reply." Under date of June 14 Mr. Edmunds answered: "Unable to consult Committee, but think you can, so far as the Committee is concerned, do what you think proper." Under date of June 15 Mr. Fuller replied: "Thank you. In my judgment publication will dispose of these fabrications without subjecting me to the humiliation of having to notice them." So it proved. Judge Loomis of the United States Court, before whom the condemnation proceedings were held, promptly declared "that there is not a particle of truth in the charge," citing numerous facts to prove that Mr. Fuller's part in the transaction was that of a high-toned gentleman and attorney. Mr. King, referred to by the anonymous enemy of Mr. Fuller, said: "The statement is absolutely and unqualifiedly false. Mr. Fuller is incapable of such conduct, and I have written to Senator Edmunds my denial of the statement, in answer to a communication from him." Mr. Fuller's dignified treatment of the matter will do much to strengthen the impression that he is worthy of the office for which he has been nominated.

The passage by the Senate of the resolution authorizing the President to enter into negotiations with all foreign Powers to provide for the settlement of international disputes by arbitration, is the most civilizing expression of any public body in this country since the abolition of slavery. The resolution seems to have been passed with substantial unanimity, but a reconsideration was moved by Mr. Riddleberger on the ground that it would settle the fisheries dispute without more ado, and in a sense contrary to the recent report of the Committee on Foreign Relations. That it would settle the fisheries dispute is unquestionable, and this is one of its great merits. That it would settle that dispute on fair terms is undoubted, because they would be terms upon which impartial judges should agree. But, on the other hand, the country would be relieved of any apprehensions growing out of the rejection of the treaty, and this would be a fair compensation for any trifling inconsistency in the action of the majority of the Senate.

Since writing last week on the "*Bridgewater* Case" we have received a copy of the *Free Press* of Ottawa, Canada, together with other information which leads us to think that the owner of the American ship *Bridgewater* has a just claim against the Dominion Government. We stated, upon information that we considered trustworthy, that Mr. Allen, the agent of the *Bridgewater*, was asked to deposit the money claimed for duties on the ship when she was offered for sale, and to receive it back when the repairs should be completed and the ship should take her departure. A copy of the alleged offer to refund the deposit, if it should be made, is before us. In it the acting Commissioner of Customs of the Dominion Government says:

"I beg to call your attention to the option which was given to the owner in this case by this Department to pay the duty, and so comply with the strict requirements of the law, with the understanding that, when the vessel was fully repaired and taken out of the Dominion, an application would be received and considered for a return to such owner of the whole of such duty, or such part thereof as might be considered equitable under the circumstances."

This is not an agreement to return the money, but is an offer either to return it or to keep it, either in whole or in part, and of course could not be accepted by a person who denied that any duty was payable under the Canadian law or under international law. That no duty was payable is sufficiently evidenced by the fact that the *Bridgewater* was eventually released unconditionally. The Ottawa *Free Press* is clear in the opinion that no British Minister will justify the detention of the *Bridgewater*, and that consequently the owner is entitled to compensation as for unjust seizure of his property. The case has nothing to do with the fisheries, but as it comes up while the fisheries dispute is under debate, it is likely to create a prejudice against the treaty.

Unusual interest is lent to the canvass in Maine by the action of the Republican Convention. Two years ago the Republicans nominated and elected a millionaire named Bodwell, who would undoubtedly have been renominated this year, according to Republican custom, if he had lived. His death, after a few months' service, promoted the President of the Senate, Mr. Marble, a man of excellent character and high standing, who was as much entitled to a second term as Mr. Bodwell would have been. But he was repugnant to the Machine, which is run by Joe Manley, and State Treasurer Burleigh was picked out as the ring candidate and forced upon the party, despite the fact that the State Constitution requires the Treasurer's accounts to be examined by the incoming Governor, and thus, in spirit if not in letter, debars the Treasurer from becoming Governor.

The result is the development of a strong Mugwump sentiment. Even before the Convention met, it was openly stated that a number of Republicans would vote for the Democratic candidate if the Machine should carry through its programme, and the revolt seems likely to gain strength. The Waterville *Mail*, a Republican paper, publishes a striking letter from a representative of these Independent voters. After saying that no sufficient reason had been given for refusing the usual courtesy of a second term to the present incumbent of the Governorship, the letter says: "We have seen nothing but insult to our judgment and freedom in the zeal of party managers to herd us with the supporters of their candidate. We have seen neither propriety nor decency in the use of all the party machinery that the leading Republican organizer of the State can control, to force us into acceptance of a nominee with whom he calculates to be the power behind the throne. We have seen nothing but disgrace to our party in sneak-thievery of caucuses by the managers of the party." The *Mail's* correspondent predicts that the dissatisfaction of self-respecting Republicans with the Manley performance "will voice itself so that it will be understood," and says: "There are a great many men in Maine who never voted anything but a Republican ticket in their lives, who are now debating the question whether they will submit to the dictation of a State convention which does not seem to them honestly representative of the rank and file of the party. Some of us, who have not even been classed as Mugwumps—except when the party whippers-in have wanted to remind us that an opinion of our own is a violation of discipline—would not regard a vote for Hon. William L. Putnam as the most roundabout way of bringing our Republican managers to their senses." That there is danger of this threat being carried out and proving effective, appears clear from the warning words of the Portland *Press*, a Republican paper of prominence, which protested against the nomination of Mr. Burleigh.

The Emperor Frederick III. expired at Potsdam at eleven o'clock on Friday, after a reign of three months and six days. His long sufferings, his patient bearing, his steadfastness to duty, and his truly heroic mould have drawn the whole civilized world as watchers at his bedside during more than a year, while an incurable disease was making its way to the seat of life. He died, as he had lived, a brave, upright man, performing his duties to the last, earning the love of his subjects with his latest breath, and leaving to his country and his children the priceless legacy of a lofty character in all the great stations to which he was called. As a soldier he had won a great renown in the crisis at Sadowa, and in other fields in the greater war which followed after Sadowa. Yet he so abhorred bloodshed that his accession to the throne was heralded in all the capitals of Europe as a guarantee of continued peace. Of the successor into whose hands the sceptre of the greatest Power of Europe now passes, little is known, but it is known that Bismarck is still the Chief of Germany, and that no government will be possible without him so long as life and bodily vigor are spared to him. But he is now past seventy, and infirmities are advancing upon the man of blood and iron.

FREE WOOL AND FOREIGN COMMERCE.

THE direct interest of the consumers and manufacturers of woollen goods in the proposition to place wool on the free list has been pretty fully set forth; our immense indirect interest in the effect of such a measure upon our general foreign trade deserves more attention than has been given it. We invite attention to a part of that effect, such as may reasonably be anticipated in our South American commerce.

One reason for testing the matter there is, that Chili and the Argentine Republic are among the leading wool-exporting countries. A stronger reason is, that we have the highest and most sacred Republican and protectionist authority for maintaining, first, that an extension of our South American trade is highly desirable; and, secondly, that our tariff on wool is the greatest obstacle to that extension. The Commission appointed by President Arthur under the act of July 7, 1884, had for its duty "to ascertain and report upon the best modes of securing more intimate commercial relations between the United States and the several countries of Central and South America." In his instructions to the Commissioners, Secretary Frelinghuysen directed them to endeavor to negotiate reciprocity treaties as "the means of inaugurating this advanced step in our national policy." But not a single treaty was forthcoming. In every case the Commissioners ran against the dead wall of our high tariff. In their final report they admit their entire failure, and give the reason for it in the words: "In any convention we, on our part, must admit wool or sugar free of duty or at greatly reduced rates. They are the peculiar products of those countries, . . . and are precisely the two we felt we had no authority to even consider in our negotiations." More specifically, in the report on the Argentine Republic, it was said that until we were ready to admit wool free there was no use in discussing a reciprocity treaty with that country.

The Commission certainly reported ample testimony to bear out their conclusion. Take the following bit from the statement of an American resident in Chili, Dr. J. H. Trumbull, for twenty-eight years a practising physician in that country:

> Q. What has been your observation as regards American trade here? A. Since I arrived it has grown beautifully less.
>
> Q. What is the cause? A. I think it is the want of a return cargo from here. There is a desire on the part of merchants and everybody to bring American goods here, but there is no way of paying for them. You have clapped, some years ago, a duty on copper and wool, and the consequence was that the vessels that came here—Hemenway's, Fitzgerald's, etc., from Boston and Baltimore—had to give up this trade. Everybody wants to import American goods. All the people say, "Why can't we go back fifteen or sixteen years ago, when we could have those American goods?"
>
> Q. You have only wool that we can take? A. That is all. You undersell us in copper; the hides are all used here.
>
> Q. Can our Government do anything except to modify the tariff? A. No, sir.
>
> Q. How would it be to establish a direct line of steamers? A. Hemenway tried it. It was a failure.

And Mr. Edward A. Hopkins, for forty years a resident of the Plate Valley, in the midst of his rather hysterical calls for subsidies and the restoration of the duty on coffee, makes it clear that the real trouble with our trade with the Argentine Republic is our tariff on wool. In his recent address before the Chamber of Commerce in this city, he asked only for a revision of the duty, asserting that the result would be "a jubilee of enthusiasm manifested towards us throughout the whole Argentine land," and that "our commerce would at once increase almost fabulously." He had just before remarked: "If Congress declare for free wool, which is not to be supposed, we have nothing more to say on this account." We should think not, for if a simple revision would make a "jubilee," no language would be left to describe the effect of making wool entirely free.

The Argentine Republic exported in 1885 283,047,000 pounds of wool, of which we took 10,222,817 pounds, or about one-twenty-eighth. Very strikingly, though naturally, our entire trade with the Argentine Republic last year was just about one-twenty-eighth of the total foreign commerce of that country, or a little less than 4 per cent. In 1860 we had a much larger proportion, about 8 per cent. If we had only held our own all these years, we should have had a trade with the Plate River of more than $17,000,000 in 1887. If we had shared in the foreign trade of Chili in 1886 in the same proportion as in 1860, the amount would have been $10,000,000 instead of the $4,930,000 it actually was. On the simple basis, thus, of twenty-eight years ago our glutted markets would have been eased last year of at least $8,000,000 worth of products, if only we had been in a position to take the pay Chili and the Argentines offer us. And it ought not to be a question of our trade merely holding its own. Every one knows that, if we had not deliberately shut ourselves out of the South American markets, our old proportion would have become greatly enlarged. England's trade with the Argentine Republic has increased as much as 46 per cent. in a single year. So might ours if, with our commanding lead of thirty years ago, we had kept on as an active competitor in the market, willing to buy as well as sell. So that, in estimating the loss we have brought upon ourselves in the restriction upon our foreign trade by our wool tariff, we are justified, in the case of the two countries mentioned, in speaking of the possibility of added exports not to the amount of $8,000,000 merely, but of vastly more.

As we said at the beginning, this line of argument is originally and legitimately protectionist and Republican. And it should be remembered that the effort to push our trade in South America—an effort that means, if it means anything, lowered or abolished duties—still has the highest Republican sanction. When the McCreary bill for calling a Pan-American Congress was before the House, our readers will recall that a man so near the fount of pure and undefiled protection as Mr. William Walter Phelps appealed to the great name of Blaine in support of the measure. But that also looks to reciprocity treaties, and a reciprocity treaty means, as we have seen, free wool. At least, we hope that none of our delegates to the Congress will mention a reciprocity treaty unless they also mention free wool, for it would not be pleasant to have a Chilian say in Washington what one said in Valparaiso: "The United States Government has by means of its heavy tariff pretended to realize the impossible, or the absurdity of selling to all the world without buying anything from anybody."

NEEDFUL AMENDMENTS OF THE CHACE BILL.

THE *Publishers' Weekly* for June 2 prints, among other interesting copyright matter, the Revised Statutes relating to copyrights, as amended by the Senate act of May 9. This publication (for which Mr. Solberg, the Secretary of the International Copyright Association of Washington, is responsible) enables any one interested in the subject to discover for himself the real bearing of the alterations proposed in the present law by the "Chace" bill. Wherever any portion of the original law has been struck out, the place of omission is noted, and the displaced words are printed in foot-notes, while the new text is given in its proper place and distinguished by the use of italic type. We have frequently and at length commented upon the various provisions of the Copyright Bill, and the effect they would have upon the law now in force, and only wish at this time to point out certain discrepancies which become noticeable when the old and new texts are thus brought into juxtaposition. The conflicting provisions to which we refer are in no wise accessory to the chief purpose of the bill, viz., to secure an honest property protection for the works of foreign authors in this country; and as they are certain to cause confusion, leading to vexatious litigation, and to occasion unintentional injustice, there is every reason why the text of the act should be corrected by the House of Representatives before it finally becomes law.

In the rewording of section 4956 of the Revised Statutes, the stipulation that the author must "within ten days from the publication thereof deliver at the office of the Librarian of Congress, or deposit in the mail addressed to the Librarian of Congress at Washington, District of Columbia, two copies of such copyright book or other article," was changed to require that the deposit shall be made "*not later than the day of publication thereof* in this or any foreign country," and that this deposit shall consist of "two copies of such copyright book or dramatic composition printed from type set within the limits of the United States." But section 4959 of the Revised Statutes contains a repetition of the stipulation as to the deposit of copies of a copyrighted book, to the effect that "*within ten days after its publication* two complete printed copies thereof, of the *best edition issued*," shall be delivered to the Librarian of Congress, or deposited in the mail addressed to that officer. This second requirement of the deposit of copies in the same sta-

tute is unnecessary, but its appearance there is readily accounted for. The previous copyright legislation had required the deposit of two copies of every book copyrighted; one copy each in two different places, within different periods of time. The Commissioners appointed to revise the statutes amended the law by changing both clauses relating to the deposit of books, so that each uniformly required that two copies should be sent to one and the same place, within the same period of time; and in the draft of the revision, printed in 1872, they recommended that the superfluous stipulation contained in section 4959 should be omitted. Why their suggestion was not acted upon at that time it is difficult to know, but it is even more difficult to understand why this provision should be allowed to remain now, when not only is it equally useless, but when, furthermore, it conflicts with the new stipulation of the "Chace" bill, not only as to the time of deposit, but also as to the edition to be deposited—for it by no means follows that the copies "printed from type set within the limits of the United States" are of the "best edition issued." Section 4959, therefore, should be amended so as to relate only to the deposit of a copy of a revised edition of any book previously copyrighted.

Section 4956, as amended by the "Chace" bill, contains the following clause: "In the case of books in foreign languages, *of which only translations in English are copyrighted*, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted." The words which we have italicized would seem to indicate that the intention was to extend copyright security to an author's translation of his work when the original was in a language which would preclude its circulation in the United States. This would be just to the foreign author, and would give him a proper stimulus to prepare an edition of his book for the benefit of American readers. But section 4952 is amended by the insertion in the "Chace" bill—in lieu of a simple reservation to authors of the right to dramatize or to translate their own works—of these words: "Authors or their assigns shall have the exclusive right to dramatize or translate any of their works *for which copyright shall have been obtained under the laws of the United States.*" The practical result of this paragraph will be to destroy entirely the value of the clause in section 4956 quoted above for any foreign author who has not obtained an American copyright for his original work; and it would seem, furthermore, practically to offer a premium upon the piracy of a foreign book by translation, inasmuch as such translation would be given the copyright monopoly of an original work, and this would carry with it (according to section 4956) the prohibition of the importation of a subsequent translation published abroad *with the author's sanction.* Surely this effect cannot have been contemplated, because it not only is a manifest injustice to the foreign author, but involves a possible serious injury to the American reader, for it is easily seen that inadequate translations will be hastily prepared for the sake of being the first to secure copyright; and, once copyrighted, no matter how indifferent such translations may be, the American reader will be obliged to content himself with them, although better ones are published abroad.

THE DISLIKE OF FARMING.

A MOVEMENT has been started lately in London, under the impulse of some Bostonians, and notably Mr. Joseph Cook, to induce Englishmen to come over and settle on the numerous deserted farms of Massachusetts and other New England States, many of which are now being taken up by Irishmen and Germans, but chiefly the former. We presume the effort, in so far as it originates on this side of the water, is due to a not unnatural desire to see the abandoned farms occupied by men of the same race and faith, and, if possible, the same standards of living as their old owners, or, in other words, to revive in the nineteenth century the emigration to New from Old England which began and ended in the seventeenth. It is hardly likely to have any perceptible success, however. The English farmer is not an emigrating man. He would not have gone to New England in the seventeenth century if he had not been driven by religious enthusiasm. Besides this, he can have to-day as much land as he wants in England, with all sorts of comforts and "improvements," for very little more than the labor of cultivating it. In other words, there are two landlords in pursuit of every farmer in England who is looking for a farm or would be at all likely to cross the sea in search of one. There are but few English farmers, too, prepared by nature or education for the life of a farmer in any part of New England. There is hardly any cultivator of the soil less fitted to struggle with the difficulties of a new country, or wring comfort from an unfruitful soil, than the English farmer. He has been so petted and taken care of by the landlords and Parliament that he has lost most of whatever courage and initiative he may once have had. When things go wrong and the landlord cannot help him, he is a very forlorn man. Why any one should suppose that he would be able to extract a comfortable living from soil which the hardworking, frugal, and ascetic Yankee has deserted in disgust or despair, we cannot imagine.

But, in addition to all this, it is a mistake to suppose that it is in New England only, or the United States only, that farm labor and life are becoming distasteful, and that all the younger generation brought up on farms are eager to quit them whenever any opportunity offers itself of getting into the great towns. The same tendency is visible in other countries in which railroads are numerous and the art of reading is widely diffused. In England, not only are farms lying vacant in great numbers, owing to the fall in agricultural prices, but the supply of farm labor is rapidly diminishing, in the teeth of a marked and steady advance in wages and greatly increased inducements in the shape of improved cottages. Mr. Kebbel, in the last edition of his well-known book on the 'Agricultural Laborer,' sums up the testimony he receives on this point from all parts of England by saying: "The rising generation of peasantry take no interest in agricultural work. In many villages the men who can cut a hedge, drain a field, or thatch a rick may be counted on the fingers of one hand, and they are old men. . . . The best boys from the schools all set their faces towards the town and scorn the plough. Those who remain get higher wages, but they neither know their work nor care to know." He declares, in fact, that there is "an exodus from the soil."

It must be remembered, too, that there has always been and still is in England a feeling of reverence for "the land" as a calling—that is, a feeling that a man who gets his living directly from the soil, whether by rent or labor, is somehow the social superior of the man who gets it by trade or by a handicraft. It is easy to see how this feeling arose in England, but there is nothing like it in any other country. A recent writer in one of the magazines, giving advice to the sons of impoverished landed gentry who think of emigrating to the United States or Canada, tells them that they must not expect to find that a farmer in these countries enjoys any more social consideration than the clerk or salesman or mechanic, or to find many, if any, farmers' sons who are not ready joyfully to exchange the hoe or the plough for the yardstick or high stool if they get a chance. The sentimental view of the land will probably die out gradually now that the landed interest has ceased to be a political power, and is no longer the wealthiest class in the community. On the farm laborers it has now no influence whatever. They flock eagerly into the towns in search of any employment they can pick up, especially on the police force and as porters at railroad stations. What rural England will be under these changed conditions it is hard to say, but the chances are that it will lose that exquisite finish which during the last two centuries has made it the wonder and admiration of foreigners of all lands. For it is a melancholy truth that to secure neat gardens, well-kept roads, parks, and demesnes, trim hedgerows, and clean fields, the love of order or an eye for beauty, or even a full purse, is not sufficient. Labor must be abundant, easily procured, cheap, and very manageable.

In France the very same movement of the agricultural population towards the towns has begun to excite serious alarm. A M. Baudrillart has been investigating the subject in fifteen of the departments, and these the richest and most prosperous, comprising the old provinces of Marne, Anjou, Touraine, Poitou, Flanders, Artois, Picardy, and the Île-de-France. He finds a positive diminution of population in all of them, it is true, but he also finds that the population of the towns increases. The young men, and especially the young women, will not live on the farms if they can help it. Agriculture offers greater inducements than ever in the shape of higher wages and better food and lodging, but these have little or no effect on the rising generation: This disinclination for farm life is,

he thinks, to be accounted for in the same way as the small number of children to a marriage. "Moral progress," he says, "has not marched abreast with material progress." Everywhere the aspirations of the rural classes are out of proportion to their intelligence and resources. The rise of wages has created a crowd of more or less factitious wants, which are difficult to meet and which keep alive a constant sense of privation. Education has created in the farming man an intellectual curiosity which it is hard to satisfy, and which keeps him constantly in mind of his isolation, of the loneliness and dulness of his life. One effect of this state of things in France is the influx from Italy and Belgium of a very low grade of laborers, whom the farmers are only too glad to hire to prevent their fields from lying waste, but who are anything but a wholesome addition to the French population. In this country we are witnessing much the same phenomenon. Wherever we find the natives abandoning in disgust the cultivation of the soil, we find a lower grade of labor, a less civilized man, who asks for less both from nature and the State, coming in to take their place at the plough.

Everybody who writes on this subject of the growing distaste for agriculture in the highly civilized countries lays a great part of the blame on the purely literary education given by the common schools. Anything, in fact, better fitted than this education to create a dislike for manual labor, and a solitary and monotonous life, it would be hard to imagine. It turns the child's thoughts almost wholly towards sedentary pursuits, and to places in which men swarm. The world which reading opens to him, both through the newspapers and such books as he is likely to get hold of, is a world of gayety, of cities, and theatres, and amusements, and luxuries; a world in which the farmer is more or less a butt for ridicule, in which the happy people are those who make fortunes by strokes of wit, in which physical labor is rarely undertaken except for amusement, and in which all rise in the world is marked by increasing abstention from toil of every description. It is, in truth, an education which originated at the Renaissance for the benefit of priests and gentlemen, and never was intended to be popular. Whether we shall ever see children trained in schools for the life they are actually to lead, or whether any such education in schools is now possible, it would take a very wise and far-seeing man to say.

TECHNICAL EDUCATION IN FRANCE.

A WRITER in the *Nineteenth Century* observes that the French mind, at once logical and mobile, is always the first to catch and focus the influences which are slowly beginning to tell on neighboring states, and "its evolution possesses for us the unique interest of a glimpse into stages of development through which other national minds may also be destined ere long to pass." For this reason perhaps it is that our Consul at Tunstall, Mr. J. Schoenhof, has selected that country to constitute his first study with regard to Technical Education in Europe, the report of which to Secretary Bayard furnishes suggestive reading.

It is very satisfactory to find that the experience of other countries on this subject is to be looked into by so wise and thoughtful an observer, for Mr. Schoenhof's own observations and reflections on what he saw are by no means the least valuable part of the pamphlet. For instance, when he tells us that "a people's state of civilization can be measured best by what its *working* classes consider necessaries of life," we see that we are on the right track. He also sees clearly that it is "unreasonable to expect of one nation the same work and results as of another, as it would be useless to engraft upon one nation an exact copy of the methods of another because the latter have been found to bring out good results there." He knows that we must see a nation *at work* if we would understand it, and this is why we are profoundly interested, not so much in its finished results as in its daily activity, and the means which it uses to train up its future workmen. Because France felt that she was losing ground as against her neighbors in the technical arts, she has made great efforts to regain her superiority, and to that end has laid her basis for improvements broad and deep by using the public-school system as their instrument. With her characteristic clear-sightedness, she has done this; her rulers have distributed the elements of Technical Education upon a broader basis than Germany, Austria, Belgium, Holland, Switzerland, or England. It is for this reason that we may be repaid for a study of her ways of working.

The rapidity with which the French statesmen have increased their means of education may be gathered from the following statement:

"To begin with 1830, the almost ludicrous sum of 116,000 francs was all the city of Paris could then find for educational purposes.

"In 1840, under the Orleans Government, it had grown to 858,000 francs.

"In 1869, the last year of Napoleon III., 6,192,000 francs were devoted to this subject. In 1871, immediately after the Franco-Prussian war, it had grown to 7,241,000 francs; in 1875, to 10,300,000 francs; in 1878, to 12,650,000 francs; in 1881, to 17,633,000 francs, and now to the *net* sum of 23,500,000 francs, after deducting the extra receipts and the outlay for building purposes."

Ten per cent. of the whole expenditure of the city of Paris is devoted to educational purposes. The city expends now for this purpose the same amount that New York city does, viz., $6,000,000, and it expends it on the education of 200,000 children, about the same number as that of this city, where the average attendance for last year was 155,000, though the total attendance was 306,000. In all France, the sum used for educational purposes was $60,000,000, the special schools for war and commerce, however, not being provided for under this sum. One very keen observation of Mr. Schoenhof is that the "inefficiency of the private schools, which the children of the so-called better classes attend, and the efficiency of the public schools, to which the children of the poorer classes flock, cannot fail to exert in time a powerful influence upon the constitution of French society." Another suggestive fact is, that the Socialists in France "make captious opposition to the workshop practice in the schools, though the working classes take well to it, the Socialists opposing everything which tends to increase the ability of the workingman, in the erroneous belief that by the degree of efficiency attained by individual workingmen their standard will be raised and the opportunity of their fellow-workingmen for finding employment correspondingly lowered." How short-sighted and false such an opinion is, is shown conclusively by the statistics given in Mr. Schoenhof's introductory letter to Secretary Bayard, where we see how illusory is the old standard of day wages used by writers on political economy. Although the same kind of machinery is used in different countries, we find that "the day earnings of the operatives (weavers) vary so much between one country and another that weavers in Switzerland earn but 2¼ to 2½ francs (44 to 49 cents), in Germany on an average 2 marks (48 cents), in French mills 2¾ to 3 francs (53 to 58 cents), with a working day from five o'clock in the morning to half-past seven in the evening, and 2½ hours of rest in the day; in England about 65 cents, with nine working hours, and in America from 80 cents to $1.12½ a day of ten working hours (average 85 cents, taken from the work account of a mill). If all things were equal, if with the same machines and working agencies the results of a day's work per hand employed were the same, of course the countries where the higher earnings prevail would be in a hopeless condition in competing with the others. But the reverse is the truth. In fact, the cheapness of the labor product stands in an inverse ratio to the weekly earnings of the operative."

This last statement points to more potent causes for difference in day wages, and hence in the comfort of the workman, than those generally put forward. Why do the same number of spindles in a cotton-mill in Bombay put out only one-half as much yarn as in Massachusetts? Another factor which we cannot afford to disregard in cost and prices of manufactured articles is the methods of distribution. We discover that "high earnings can be obtained only by great quickness, deftness, and uninterrupted attention and application, qualities which again can be supplied by none but the best conditioned labor, enjoying the highest standard of living." That the average weekly earnings of a workman at Waterbury, Conn., are $10.71, four times as high as in the Black Forest or Switzerland, while the Waterbury watches can be sold at an almost incredibly low price, shows the value in an economic point of view of excellent machinery, and skill, and great quickness of labor. Again, the chief value of an article often depends on artistic design, and here the value of technical schools becomes at once apparent. An interesting observation is that of the director of one of the apprentice schools to the effect "that the best pieces coming under his observation were those made by workingmen who still worked on the old method, that is to say, making every part of the work themselves without the help of labor-saving automatic machinery." Another

gives us a fact not less instructive. He says: "It has often happened that I have received apparatus, apparently perfect, made by an expert, but having one small defect: it would not do. Well, sirs, in most cases, the cause was simple, but unknown to the man who brought me the instrument. He knew how to work, but he did not know for what his work was intended." Mr. Schoenhof goes on:

"Fortunately self-interest begins to see the drift, and to understand that ignorant, or, what is synonymous, cheap labor, is as incompatible with maintaining position in competition as the old methods in transportation against the railroad and steamship. Recognizing the force of this axiom, France was quick in adapting its school system to the demands of a new epoch in the history of man. The elements of knowledge and the elements of workmanship which the public schools place within the reach of everybody, prepare the aspiring pupil for the highest branches of technical education put at his disposal by the liberal care of the State. Through the means for extending technical education in both directions, production is well taken care of."

This calls attention to one very important fact, that in the public schools the aim is not so much to train to one special trade as to give general power. How this is sought to be attained in the training of the young for the practical arts of life, in the French Republic, is fully shown in Mr. Schoenhof's report.

THE INDIAN GOVERNMENT AND THE STATE OF THIBET.

LONDON, May 2, 1888.

THE Indian Government has become involved in a difficulty with the State of Thibet which, unless treated with the utmost patience and gentleness, may easily grow into an issue of a truly formidable character. It has, thus far, attracted so little attention in England that in the United States it, not improbably, may have escaped observation altogether. But that is generally the way with our Indian troubles. They start from such very small beginnings as to elude observation during the stages of their growth, when they could be successfully encountered, and only then succeed in attracting public attention when the possibility of a peaceful solution is passing away. So does it threaten to be in this matter with Thibet.

Our Indian Empire, as I have pointed out in previous letters, is walled off from the rest of Asia by the stupendous barrier of the Himalaya Mountains. We are indebted for this isolation to the rapidity and comparative ease with which we overran the country and consolidated our power therein. The mountain barrier, also, marks the limit where the profitable occupation of the country ceases. A double reason, therefore, ought to have restrained us from all action which tended, however remotely, to encroach upon the line of fortifications which Nature herself would seem to have thrown up for the protection of India. The one reason was that it is impossible to extend our frontier beyond the Himalayas without aligning it with that of China on the northeast, and Asiatic Russia on the northwest. The other reason was, perhaps, even stronger: as the revenues of these mountain-lands could not nearly repay the costs of their occupation, every such extension of territory involved the imposition of additional taxation on our Indian subjects, and, *pro tanto*, tended to destroy their loyalty to a rule which claimed their allegiance mainly on the ground that its taxation was light, and that it added largely to the wealth of the country.

Regardless, however, of either consideration, the Indian Government has, for more than half a century, been busily engaged in piercing the Himalaya Mountains—now at one point, now at another; and has persisted in this policy in the face of the plainest evidence of its disastrous character, politically as well as financially. Our relations with Afghanistan constitute the part of this policy that is best known to the world, but even here its financial and political consequences to India are very inadequately appreciated. Financially, we have expended about a hundred millions of the wealth of India, and increased the annual cost of our Indian army from twelve to close upon twenty millions, with the result that we have established ourselves in a single corner of Afghanistan which will become immediately untenable if the Russians in Asia occupy Herat, which they can do whenever they choose. That the Indian Government is well aware that our position in Afghanistan is untenable in the event of a Russian advance, is shown by its taking part in the demarcation of the frontier dividing Afghanistan from Asiatic Russia—an act without meaning unless it had resolved to regard the violation of this frontier as a *casus belli*. As it is absolutely certain that, in the event of a disagreement with Great Britain in Europe, Russia will not respect this frontier, but will occupy Herat and all the country lying between the Oxus and the Hindu-Kush, the expenses already borne by India, in order to obtain a footing in Afghanistan, are as nothing compared with those which are impending in a not distant future, when, as a consequence of its present policy, the Indian Government will be compelled permanently to occupy both Kandahar and Kabul.

Now, just as the deserts and hills of Afghanistan divided India from Asiatic Russia on the northwest, so the territory of Burmah divided India from China on the northeast. This barrier, also, the Indian Government has deliberately thrown down, and the results to India, financially and politically, threaten to be only less disastrous than most which have ensued upon its policy in Afghanistan. Upper Burmah shows no signs of quieting down. On the contrary, at no time since our occupation have the "dacoits," as they are called, exhibited greater activity, or the attacks upon our posts been of so determined a character. The fact is, the conquest of Upper Burmah was undertaken in total ignorance of the peculiar difficulties attaching to the enterprise. Even in Afghanistan there are several centres of population, such as Kandahar, Ghuzni, Kabul, Jelalabad, the occupation of which gives an invading force the command of the districts from whence they draw their supplies. But there is literally only one city in Upper Burmah—Mandalay—which has always been fed from British Burmah. All the rest of the country, so far as it is peopled at all, consists of little hamlets, self-supporting, and divided from one another by great tracts of all but impenetrable forest. Until this forest has been cleared, the rivers bridged, and roads opened up in every direction, to establish a government or get any real hold of the country is a physical impossibility. Meanwhile, no revenue can be collected; the country remains, indeed, in a chronic state of semi-famine, as the peaceable population have in large numbers abandoned their villages and flocked into Mandalay and other military centres, where they have to be fed by the State. We have (inclusive of military police) about forty thousand troops scattered in small detachments through the province, and the heavy cost of keeping up this large force falls exclusively on the Indian Exchequer.

Such, so far, have been the financial effects of the conquest of Upper Burmah. Politically its consequences threaten to be no less serious. In the hills which divide Burmah from China and Siam dwell a number of wild tribes—Chins, Kakhyens, Shans, and others—all of which profess a certain allegiance to the Emperor of China. They constantly raid into the defenceless Burmese villages from their mountain fastnesses, but as yet these proceedings have received neither the sanction nor the assistance of the Chinese Government. If that sanction were given, if the Chinese Government allowed its officials in Yunnan to distribute rifles and ammunition among these tribes, then our difficulties in Upper Burmah would be aggravated ten-fold, and, though we doubled our army of occupation, we should be unable to give protection to our subjects, or to follow the raiders into their own country. It is at this moment, when a state of cordial amity with China is a matter of vital importance, that the Indian Government has drifted into a difficulty with Thibet which places that amity in extreme peril.

Thibet, as every one knows, is regarded as sacred territory by the Mongolians and other Buddhist subjects under the sway of the Chinese Emperor. It would in all probability cost the Emperor his throne if he tamely acquiesced in the occupation of the capital, Lassa, by a foreign force, and the whole strength of the empire would be put into the field in order to avert the contingency of its permanent detachment from China. So long ago as the time of Warren Hastings, the Indian Government made an attempt to establish commercial relations with Thibet; and these attempts were renewed a little later on. They led to no result, and the rapidity with which the British overran and conquered India has strengthened the Thibetans in their resolve not to allow us, under any pretext whatsoever, to get a footing on their soil. There is no reason why we should desire to do so. Thibet is, perhaps, the poorest country in the world, inhabited by a scanty and stationary population, and incapable of supporting a larger. At the same time, ever since we conquered Bengal, there have been commercial dealings between British India and Thibet. This commerce, on the Thibetan side, has been carried on by a colony of Cashmeree Moslems which has been settled at Lassa for a great many years, and is in high consideration there, and the route followed by them has been through the independent State of Nepal into India. Had we been content to allow matters to continue on this footing, our present difficulties would never have occurred. Unluckily, British merchants, especially during periods of commercial depression, are unceasing in their endeavors to discover new markets for British commodities; and a few years ago, when Lord Randolph Churchill was at the India Office, mercantile influence persuaded him that an effort ought to be made to bring the Thibetan trade down to Calcutta by a directer route than through Nepal. It was represented to him that this commerce was heavily crippled by transit duties levied by the Nepalese Government, whereas, by making a new channel for it through the small hill-state of Sikkim, which was under our protection, not only would these transit duties be evaded, but the distance between Lassa and British territory would be greatly shortened. The Government in Calcutta was alive to the political danger of this proceeding, but Lord Randolph overruled its objections, and insisted upon the organizing of

a mission, upon a formidable scale, which was to make its way to Lassa for the purpose of executing a commercial treaty with the Thibetan authorities there.

Great was the consternation in Lassa when this intention became known. That consternation increased as the magnitude of the mission went on increasing. It is likely that the reports of this magnitude gave to the mission the dimensions of an invading army before it reached Lassa. The fate which they had so long dreaded and striven to avoid seemed to be coming on them at last. Their fears were not diminished by the accounts which the Cashmere colony gave of the habitual policy of the English in India. Commercial missions, according to these experienced observers, were, with these insidious people, the invariable preludes to armies of invasion and forcible occupation of a country. Meanwhile, however, a British force had marched to Mandalay, deposed King Theebaw, and annexed his territory. Now, the sovereign of Upper Burmah stood in some vague position of subordination to the Emperor of China. It was the custom, at intervals of ten years, and on the accession of a new King, to send presents to Peking, thus, in fact, acknowledging the suzerainty of the Chinese Emperor. If such tribute was withheld, it was in the power of the Chinese Government to liberate the Burmese people from the duty of allegiance to their nominal sovereign. After our annexation of Upper Burmah, the Chinese Government consented to rocognize the validity of British rule, on the condition that we abandoned our intention of sending a commercial mission to Thibet. We accepted this condition, the mission was broken up, and there seemed to be an end of the incident.

It was not so, however. The road, or what in those wild latitudes passes for a road, from Thibet into Sikkim enters the latter State through the archway of a fort which has been built for its protection; and, presumably with the view to be beforehand with the Indian Government in case it should revert to its abandoned policy, the Thibetans placed a garrison in this fort. Now, the fort is within the Sikkim frontier, and Sikkim is under our protection. The Thibetans, therefore, could not be allowed to remain upon soil which was not their own. At the same time, unless we were ourselves to establish a garrison in the fort, it was difficult to see how they could be kept out of it. Now, the fort is 300 miles distant from the nearest British cantonment. It stands at an elevation of 14,000 feet above the level of the sea, and, from the beginning of October to the end of May, the garrison would have to live in a climate of frightful severity, and entirely cut off from British India. In fact, the fort could not be garrisoned. Application, accordingly, was made to the Chinese Government to use its influence to persuade the Thibetan Government to withdraw from what was virtually British territory. The Chinese Government tried and failed. The Thibetans declined to retire, and, at length Lord Dufferin had no alternative but to send a force of 3,000 men to drive them out. After a toilsome and difficult march, this force reached the Sikkim frontier, and, as soon as it appeared, the Thibetans fled. They remain, however, just within their own frontier. They refuse to listen to any terms of agreement. It is certain that as soon as our troops are withdrawn they will again take possession of the fort. What are we to do? The British troops, even if they desired to do so, have neither the carriage nor the supplies necessary to follow the Thibetans far into their own country. In three weeks at the furthest, the monsoon will break over the Himalaya Mountains, when it will be impossible for them to remain under canvas. The fort, therefore, until next spring, will have to be left in the possession of the Thibetans.

But even then it is difficult to see what the Indian Government is to do. It cannot send 3,000 men every summer to this distant point in order to drive out the Thibetans, allowing them to reoccupy the fort as soon as the bad weather sets in. A march in force to Lassa, on the other hand, would be an operation to which the march to Kandahar was mere child's play, and, indeed, could not be attempted without provoking the Chinese Government to acts of retaliation in Upper Burmah which would make our position there supremely difficult and ruinously costly. The Indian Government is on the horns of a most painful dilemma. If it yields to the Thibetans, it risks a loss of prestige which may have a most damaging influence on its authority in India. If it determines to coerce them into submission, it plunges into a regular jungle of difficulties, financial and political, the issue of which is beyond the reach of human conjecture.

ROBERT D. OSBORN, Lieut.-Colonel.

THE GOETHE SOCIETY IN WEIMAR.

WEIMAR, May 28, 1888.

IN April, 1885, died the last of the Goethes. The archives passed unconditionally into the hands of the Grand Duchess of Saxe-Weimar. Her Royal Highness, conscious of the wide responsibility which the legacy entailed, summoned about her the leading representatives of the "Goethe Wissenschaft," and under her protectorate the society was founded. Fifteen years ago the expression "Goethe Wissenschaft" would have been found, to say the least, novel. Those engaged in the special study of Goethe were moved by an intense dilettante enthusiasm, but had, for the most part, no connection with the University. There was at that time in the capital city of the new empire no professorship of modern German literature. Herman Grimm, who had won his fame as the biographer of Michael Angelo and as a graceful essayist, occasioned something like a sensation when, in 1874–5, he delivered a series of lectures at the University of Berlin on the life and times of Goethe. Besides furnishing the worthiest life of Goethe that has yet appeared, these lectures accomplished further that a chair of modern German literature came to be regarded as a necessity, and Wilhelm Scherer was called to create the new department. Such a professorship is now held to be of supreme importance. Thus the opening of the Goethe archives finds a well-developed Goethe Wissenschaft ready to use and edit the treasures; the study of German literature enters herewith upon a new era; from Weimar, as of old, a steady influence has begun to go out, and thitherward many pilgrims turn their steps yearly in the week of Whitsuntide.

That the success of the undertaking is thus by the experience of three years assured, was the conviction of all who were present at this third annual meeting. A buoyant spirit was abroad, which only those can have whom indubitable success is spurring on to continued effort. One had the feeling that all went well. Moreover, there is a witchery about Weimar itself that gives to these annual meetings an especial worth and charm. The beautiful park has been called a poem of Goethe's, and to each of us it seems to belong, with the same right that his poems belong to all who can read them. The sepulchre where the poet princes lie by the side of the princes of the house of Weimar, has become a pilgrimage chapel. The Goethe House is a National Museum. A half-sad romantic interest attaches to the pleasant rooms of the Frau von Stein, where something of the ideal spirit of an *Iphigenie* has left its impress, which the scornful wit of the cynical can never quite erase. With a certain merry poem of Goethe's in mind, one visits the grand-ducal castles on the wooded heights about Weimar; Tiefurth, the castle of nooks and corners, where, on the banks of the Ilm, the "Fischerin" was played; Belvedere, overlooking the pretty town in the valley; and Ettersburg, where the "Iphigenie" was first performed with Goethe as *Orestes*. A visit to the archives, too, brings a rich reward. The letters to the Frau von Stein speak in the handwriting of Goethe a mute language which the printed editions cannot reproduce, and the painstaking care with which he has written the 'Roman Elegies' reminds one of Rousseau's 'Nouvelle Héloïse,' written on tinted note-paper with delicate neatness. But it is, perhaps, the social phase of the Weimar assemblies from which the greatest advantages accrue. During these days the intercourse between the members has something of the character of a family gathering, where the youngest may raise his voice in inquiry, and the patriarchs of the world of letters give themselves freely. This is one of the most important forces in maintaining that community of sentiment to which the Society owes its influence, actual and potential. The benefits of the formal meeting, which fell this year on May 26, are greatly enhanced by the fraternal spirit which pervades the whole.

The order of the day was the usual one. The entrance of the grand-ducal party with their guest, the Crown Prince of Greece, was the signal for the opening of the meeting. Kuno Fischer of Heidelberg was the orator of the day; his subject, Goethe's "Iphigenie." It cannot be said that the address contained strikingly new material or that the view-point was a new one; but novelty may be uncomplainingly dispensed with when the well-known stories are so well retold. The plan of the drama, the psychological conditions out of which it arose, its slow growth, "like the orange tree," the gradual metamorphosis from prose into verse, and the consequent enhancement of the pure, strong repose of the heroine's character, all gained new force from the refined observation of Kuno Fischer and from his eloquent delivery. "Iphigenie," like "Tasso," was conceived in Germany; Weimar experiences gave the motives, and Italy furnished the classic form. The work went on in many places, and sometimes amid strange surroundings. Knebel tells a story of Goethe engaged in official duties among Thuringian recruits; upon the table lay the lists, beneath them some other papers, the MS. of the "Iphigenie"! It accompanied him through Verona, Vicenza, Venice, and Bologna to Rome, where it was completed. The speaker emphasized the religious element in the drama. The first act closes with a prayer, a firm faith in the divine love; the fourth act with the old Titanic tones, the half-defiant song of the Fates. Which spirit will prove the stronger, the saving faith or the old curse on the house of Tantalus? This question is the centre of the dramatic interest. The liberation from the ancestral curse through the pure devotion and moral strength of *Iphigenie* has a parallel in Goethe's own experience: the soul emerging from the Titanic struggles of the *Sturm und Drang* into philosophic contemplation and quiet trust. The heaven-storming spirit of his Prometheus, with the defiant question to the gods, "I honor you! wherefore?" is

calmed. The old rebelliousness against the divine justice echoes still in the song of the Fates, but like the memories of early childhood, the almost forgotten tones of long dead times; and to the angry "Wherefore?" of the *Sturm und Drang* the Hellenic repose of *Iphigenie* gives answer:

"Denn die Unsterblichen lieben der Menschen
Welt verbreitete gute Geschlechter."

Reconciliation in its widest sense is the theme of the "Iphigenie."

The speaker drew a brief comparison between the final version in verse and the prose version of 1781. The process of recasting the prose into metric form refined the conception of the whole, and suggested many delicate touches which the prose version had missed. The finer atmosphere of the verse required a further spiritualization of the beings that were to breathe in it. No reader can fail to be impressed with the singular purity which the very cadence of the verse lends to the heroine's character. In Bologna, before Raphael's St. Cæcilia, Goethe had resolved that his *Iphigenie* should never utter a word that might not have fallen from the lips of this saint. To Raphael's fine spirit are due, perhaps, many of the more subtle touches that distinguish the Italian from the German *Iphigenie*.

The oration was followed by some interesting communications from Erich Schmidt. Important MSS. relating to the second part of "Faust" have been found, though not in perfect preservation. The whole plan of the second part has been saved; it shows some insignificant variations from the form familiar to us—the incident of the paper money is, for instance, wanting; on the other hand, much new material has come to light, with some valuable hints from commentators. What Prof. Schmidt revealed stimulated, without gratifying, curiosity. He gave timely emphasis, however, to the fact that the days of "Sphinx" criticism are past, and the second part of "Faust" can no longer be thrust aside as a collection of disconnected old man's fancies. Quite as untenable is the view of the oracular interpreter who whispers of a wealth of mystic prophecy, as in the visions of St. John. A healthy appreciation of its high poetic worth has restored the second part to its proper rank as an inseparable member of the "Faust" poem. The conception of the *whole* of "Faust," wrote Goethe a few days before his death, was complete from the beginning. It had required sixty years to bring it to paper. He had conceived the plan of composing a poem of human life, and had waited for a *whole* life's experience to furnish him the materials. Erich Schmidt's address, as a specimen of philological scholarship, and Kuno Fischer's free, æsthetic treatment of his subject, afford excellent examples of the two forces united in the Goethe Society to the attainment of a common end.

The business reports were most satisfactory. The membership has reached nearly 3,000. England and America manifest a lively interest. The English branch publishes its first Year-book, and a new society has been formed in Manchester. Numerous gifts keep the treasury well filled, in spite of increased expenses. The library of MSS., letters, and printed books has been augmented by gift and purchase, and has reached a point of great completeness in the short space of three years. Through the efforts of the Grand Duchess, the literary remains of the Chancellor von Müller and of Eckermann have been secured—among the treasures of the latter being twelve *Volkslieder* collected by Goethe in 1771 from the lips of Alsatian peasants. The third publication of the Society, announced last year, will appear in the autumn; it will contain reproductions of twenty-two drawings from the hand of Goethe. Of the Goethe Museum little can be added to what readers of the *Nation* are already familiar with. One note is of interest. Besides the large collections of engravings, casts, geological specimens, and the numerous other evidences of Goethe's manysidedness, there is a collection of skulls. I am assured on good authority that, in the arrangement of these specimens seventy years ago, Goethe followed certain principles of his own which are to-day generally regarded as the result of the most recent scientific investigation and experience.

At the banquet in the afternoon some one hundred and fifty guests were present. Judge von Simson presided. It had been his office on two similar occasions to propose the first toast. The old enthusiasm was quieter this year, and there was something of sadness, hoping against hope, in the sentiment:

"Die Zahl der Tropfen, die er hegt,
Sei Euren Tagen zugelegt,"

with which each member raised his glass and drank the first toast to the Emperor Frederick. Grateful appreciation of the unwearied and disinterested energy of the high protectorate under which the Society stands, found expression in the toast of Herr von Loeper to the Grand Duke and Duchess of Saxe-Weimar. The Society listened then with much interest to an earnest story told by an old gentleman, who had known Goethe; it was the Hofrath Gille of Jena. He had often been employed as a messenger to the house of his Excellency, and remembers the kindly tone in which Goethe inquired into his boyish affairs. Of all days one is most memorable. The mourners were descending the Italian staircase as he entered. They had just left the room where shortly before the words "Mehr Licht" had been uttered and the great spirit passed away. It became Gille's duty to watch a whole night through by Goethe's side. The face lay in full, bright light; the classic features were in perfect rest, without sign of death, seeming to sleep—as if the body were immortal like the soul. The drawing which was made at the time, Gille assures us, is very like. The simple story of fifty-five years ago formed a pleasing incident in the festivities. The toast which was drunk to the President of the Society called forth a speech of unusual interest. In a few well-chosen words Simson sketched the story of his eventful life. He, too, had known Goethe. In the archives had been found a note from Eckermann introducing to Goethe "a promising young man of the name of Simson." Him who has seen Goethe fortune will never quite abandon, and to good fortune Simson modestly ascribed much of his success. He was a member of the Parliament of 1848, and was of the committee whose offers to the King of Prussia were peremptorily refused, as coming from the people. A strange turn of events brought him to Paris in 1870-1, and again he was of the delegation whose offers, as coming from the people, were not refused by the King of Prussia. It is a piece of rare historic and poetic justice that the member of Parliament in 1848 should still preside in 1888 over the highest court of the empire, in the building up of which he has played so interesting a part. Scattering toasts formed an easy transition from speech-making to general conversation, and need no mention here—except, perhaps, the toast to Schiller, which was appropriately addressed to his grandson, who was present, the Baron von Gleichen-Russwurm.

In the evening the Society met in the Court Theatre, as guests of the Grand Duchess. Two short plays of Goethe had been selected, and, thanks to the energy of the management, found favor in the eyes of an at first somewhat sceptical public. The first was the oldest that has come down to us of Goethe's plays: "Die Laune des Verliebten," a merry little idyl from the old student days in Leipzig, and reminding one of the paintings of Watteau. The second piece was the rollicking farce, "Der Jahrmarktsfest zu Plundersweilern," written already in the Frankfort period, and several times performed to the entertainment of the court at Ettersburg. Nothing could have been better adapted to the amusement of an after-dinner party; and the many-colored fun of these village revels, with the highly humorous shadow scenes from Old Testament history, brought the day to a merry close.

The departing guests of "Athens on the Ilm" took with them the memory of happy days in association with the great spirits of the past and the leading spirits of the present. The belief is gaining ground that the Goethe Society will not have finished its mission when the last volume of Goethe's works has appeared, but that it has a future in which it will be called upon to deal with problems of far wider range. The Grand Duke recently expressed the hope that out of this society, by natural and unforced development, a general parliament of German scholarship might arise, that should bear some resemblance to the French Academy, and, among other benefits, supply the German people with an "Academie der Sprache." Upon the initiative of the State such an institution is impossible, but the unifying and reconciling tendencies of a society such as this, render this hope, if not at first sight credible, at all events not chimerical. Rahel said of Goethe: "He is the point of union for all that goes under the name of man." About him as a point of union, the workers in the world of literature are already rallying. For Germany specifically, Goethe is perhaps the surest hope for the permanence of the united fatherland. A certain writer, whose genius and learning give his words weight, has recently said the time is coming when what Dante has been and still is to Italy, Goethe shall be to Germany. The Goethe Society is a form which this growing influence has taken. One of the toasts I omitted to mention; it was proposed by Herman Grimm to the Society itself, in the assured belief that not the members alone, but many thinkers and doers in many lands, will unite in the wish, "Sie möge gedeihen!" C. H. G.

PRIMITIVE CIVILIZATION IN ITALY.

RIETI, June 6, 1888.

THE most important elements in the recent archæological discoveries in Italy from the scientific point of view, are, I believe, those which throw light on the pre-Etruscan civilization of the peninsula. The recent discoveries at Sybaris, while a great disappointment to those who hoped to find the remains of a Greek city buried five centuries B. C., and therefore furnishing in its remains a definite line of demarcation in the arts, have on the other hand thrown an important light on the question of the state of Italian civilization prior to the advent of the Greeks.

The results of the excavations of the necropolis near the site of Sybaris show that it was the cemetery of a race which had not yet felt the influence of the Hellenic civilization, and as at best the site can only have been ten miles or so from Sybaris, it seems impossible that it should not have been anterior to the arrival of the Greeks. I say seems so, for Pigorini, who

is an eminent authority, holds that the remains are those of an Italic tribe which drifted down into contact with the Greeks after the advent of the latter; but as he gives no reason for his opinion, and the entire absence of traces of Greek art in the objects found is an excellent reason for the contrary, I consider his opinion outweighed by that of Fiorelli, our highest authority in such matters, with whom are Gamurrini, the most experienced excavator of prehistoric remains in the district which must provide the material for our decisions, and Barnabei, the head of this section in the department of antiquities, all of whom hold no doubt as to the prehellenic date of the material discovered in the necropolis of the Sybarite district. I do not know what are the opinions of Lanciani, our other great authority on Italic prehistory, but I believe, from his previously expressed opinion on the Latin finds, that he would be with Fiorelli.

But the importance of the attribution of these objects will appear only when we learn that they are identical with the earliest art found in Vetulonia, Civita Castellana (the antique Falerii), and the most archaic tombs of Corneto (Tarquinia) as well as, in certain details, with the finds in the lacustrine deposits of the northern provinces of Italy. Especially the finding in all these named localities of the cinerary urns of the hut type, whose discovery on the top of the Alban mountain under two strata of volcanic deposits had long been considered the earliest evidence of Italian civilization, must be considered evidence of a common Italic civilization distinct from the Etruscan. The occurrence of these evidences of it in a district like that of the Basilicata, where the Etruscans never went, proves its independence of them, while its priority in development to the remains recognizable as Etruscan in locations like Falerii, Tarquinia, and Vetulonia proves its widespread existence prior to any distinctly Etruscan domination, and, I believe, prior to the Etruscan colonization.

Great weight must be accorded to the opinion of Helbig, who maintains distinctly that all this early art is early Etruscan, and that the well-tombs which at Tarquinia disclose the hut-urns in perfection are but an earlier form of Etruscan burial—in other words, that early Etruscan and archaic Italic are identical. Helbig's opinions are those of a profound student and master in this province, and must be met, if rejected, by grave objections. Fiorelli, however, finds them untenable, as do the Italian archæologists with whom I have personal acquaintance, and the Sybarite tombs are of the most serious importance in this controversy. Fiorelli maintains the existence of a primitive Italic civilization anterior to the Etruscan, and holds the community of these products of an archaic art from such widely separated localities as proof of it. Gamurrini goes further, and would identify it with the Pelasgic civilization to which so many traditions testify. And Castellani, in his discussion (informed by a most intimate technical knowledge of his art) of the early goldwork of Italy, shows that the most beautiful and characteristic art in this branch comes from places where there is no question that the Etruscans never had a footing. The enormous remains of civic greatness in the southern provinces of Italy entirely beyond the range of Etruscan influence, the walls of the great cities of Alatri, Arpino, and innumerable others in that section of Italy south of the valley of the Tiber —the country of the Sabini, Marsi, and Hernici—and even as far as Sicily, make it impossible to admit the priority of Etruscan civilization; for even Helbig concedes that the Etruscans came in about 900 B. C., while we have no tradition of any contemporary political organization except that of the Latin tribes which preceded Rome, and whose evidences we have in the remains of Antium, Ardea, Lanuvium, etc.—probably contemporary with Etruscan domination further north, since they are by tradition long prior to the foundation of Rome, while the ruins of Alatri, Arpino, and Segni, only a few miles away, are of an art utterly diverse and unquestionably far more primitive.

But in one of the well-tombs at Corneto was found a bronze helmet and bronze sword of admirable workmanship—early, because prior to the knowledge of the art of soldering—and, according to all authorities, of eastern provenance, and with them a hut-urn and the most primitive forms of hand-made pottery. Helbig, to maintain his theory, must bring this deposit down to the ninth century, and accordingly he considers it Carthaginian; but is it not equally to be explained by Fiorelli's hypothesis of an earlier Italic civilization which had occasional intercourse with the East—intercourse common enough in the Etruscan days?

It seems to me impossible to crowd all the evidences we have into the centuries between the Dorian emigration and the Etruscan arrival and the beginnings of Roman history. The colossal ruins in southern Italy, all of a stone-working epoch, cannot be thus disposed of, and furnish, it seems to me, indisputable testimony to the reality of the great Italic civilization of which the Latin, the Sabine, and whatever others might lie beyond were the fragments and successors.

Here, at Rieti, the ancient Reate, the stronghold of the Sabines, we have still confirmatory evidence, for the earliest remains to be found are not Pelasgic, but of the early Latin epoch, long anterior, if judged by the technique, to the oldest fragments of Rome, but also long posterior to the remains of the Pelasgic cities found beyond it in every direction. Even on one of the hills which dominate the plain of Rieti are some remains of the walls of one of them, built when a lake was where now the plain is; and beyond, to the southward for many miles, they multiply. Here the Etruscan never came; the indomitable mountaineers yielded only to the steady invasion and organized resources of Rome. The last point at which, so far, we can find traces of the Etruscan overlapping the earlier work, is at Cesi, at the opening of this valley, and in front (so to speak) of the gate of this great mountain country where the Italic civilization held its own longest. And Cesi is one of the most interesting points in this comparative study which I have yet visited. The remains of the early wall are of what is known as the first Cyclopean style. Huge masses of rock, unworked in any way, form a defence around the foot of a cliff penetrated by numerous caverns, in which it is reasonable to suppose were the first dwellings of the citizens. It has long been agreed by the authorities on this matter that the dwellings of these Pelasgic cities were in wood or some other perishable material, for in none of them, where they were abandoned in the early period, do we find a trace of interior construction. Walls of loose stone laid in, and plastered with mud, to keep the wind out, may not have been unused, but there is no evidence of them, nor could we expect to find any, as such walls for dwelling purposes could not long resist the elements when abandoned to them; but such aggregations of stone as even these would have left do not appear, and we have a right to believe that the first dwellings in these cities were in wood or skins, and that wall-building was purely a defensive labor. Here at Cesi we find the civic condition in the transition from cave dwelling to city dwelling proper, for with the defensive wall the city began.

To my great surprise, no excavations in the caves of Cesi have been made, though they would seem to promise most important results. That the city was a very early one is clear, and of its importance we can judge by the remains which indicate extensive and unusually complicated defensive works in the second Pelasgic epoch, and subsequently the Roman, ending with the destruction of the city and the removal of the habitants to Carsoli, on a lower site a few miles away, and with the return to Cesi from Carsoli in the middle ages, when Carsoli was sacked by the barbarians. That the Etruscans held it, is clear from their cippi, found in the necropolis near by, though, as no systematic excavations have yet been made, it is quite impossible to place the few remains we have. A few cippi found in digging the fields around are built into the walls of the houses for preservation, and the enterprising and intelligent Syndic, Signor Eustachi, has gathered and will impart all we know of the history of the city. A charming drive of five miles from Terni brings us to the old city overlooking the valley of the Nera, and the country between Narni and Spoleto—a beautiful and healthful country, which must in all ages have been an attraction to the races that traversed Italy. W. J. S.

Correspondence.

FACT VS. THEORY OF LAW.

To the Editor of The Nation:

Sir: In the *Nation* of last week a correspondent of yours expresses difficulty in understanding a distinction drawn by Von Holst, when writing on the President's veto power, between a *fact* and a *theory of law*. The distinction is doubtless too profound for most of us, but may be illustrated by an example from its author's 'Constitutional History of the United States.' This elaborate work, in discussing Jackson's veto of the Bank Bill, assumes broadly the theory of law that the United States Supreme Court's decision that the bank was constitutional was conclusive upon the President, and deprived him of any right to enter upon the question; and the author indulges in some little Teutonic eloquence upon the subject, maintaining to the full that the court had ended the matter, and that their decisions are, by our *theory of law*, always final and conclusive, even upon other departments of the Federal Government, upon all questions of constitutional power.

Some years ago, wishing to see how far authors would adhere to this doctrine when the court chanced to decide in a way which did not suit their ideas, Von Holst occurred to me as one who upheld the doctrine broadly when the court had the luck to be with him; so I turned on a venture to his pages on the question of the right to take slaves into the Territories, and found, as expected, that his *theory of law* went at once to the four winds of heaven. He there argues that Calhoun's position was "logically, historically, and constitutionally, absolutely untenable," and then says the "only one argument of real weight" in Calhoun's favor was that the Supreme Court had twice rendered decisions which, *if correct*, bore out his doctrine; and then, with supreme oblivion of the *theory of law* as to the finality of judicial decisions, he proceeds to prove to his own satisfaction that the court was *wrong*.

His opinion on the Bank Bill veto was certainly based on a *theory of law*, so probably his later cruel desertion of his own adopted child was based on some abstruse conception he would call a *fact*. Can one wonder that people call things "mere" theories when they are so easily cast away, like an old collar that has grown frayed and irritates one's neck?

Very respectfully yours, WM. M. MEIGS.

PHILADELPHIA, June 18, 1888.

Notes.

A PIQUANT work about to appear at Jacksonville is 'Carpet-Bag Rule in Florida,' being the inside workings of the reconstruction of civil government in that State after the close of the war, by John Wallace, late Senator from Leon County. The author, formerly a slave of unmixed African blood, sought freedom in the Union lines when Gen. Burnside was operating in North Carolina, and afterwards enlisted and fought on the Union side. He has served for twelve years in both branches of the Legislature, and now holds "that the ascendancy of the Democratic party to the State Government in 1877 has proved a blessing in disguise to the colored people of Florida."

Mr. Wm. Henry Perrin has prepared for the Filson Club a work on 'The Pioneer Newspaper Press of Kentucky,' which will be published by John P. Morton & Co., Louisville, Ky., and sold to subscribers in a limited edition.

'Uncle Tom's Tenement,' a novel by Mrs. Alice Wellington Rollins, will be published next month by the William E. Smythe Co., Boston.

Henry Holt & Co. will be the American publishers of 'A Modern Brigand,' by the author of 'Miss Bayle's Romance.' Its characters are, Daudet-like, thinly disguised contemporary notabilities in the British financial world, and even in politics.

John B. Alden announces 'A Fortnight of Folly,' by Maurice Thompson.

Clarke & Carruth, Boston, have in press 'Among the Theologies,' by Hiram Orcutt, LL.D.

Houghton, Mifflin & Co. have in press a biography of Delia Bacon, who in her 'Philosophy of Shakespeare's Plays' announced and vigorously maintained the theory that Sir Walter Raleigh, Bacon, and others were the real authors. The book, from the pen of Mr. Theodore Bacon of Rochester, contains many letters of interest by Carlyle, Emerson, and Hawthorne.

An anti-Baconian work, in the sense that praise of any other Republican candidate is dispraise of Blaine, is 'William Shakspere Portrayed by Himself,' by Robert Waters, author of a 'Life of Cobbett,' announced by Worthington Co.

Mr. Chas. G. Leland's 'Dictionary of Slang, Jargon, and Cant,' now in the press of Whittaker & Co., London, will be followed directly by a work on 'Americanisms' from the same hand.

A new eclectic monthly periodical is announced, "*Current Literature:* A Magazine of Record and Review." Book reviews will form an original feature. Publication will begin next month at 42 West Twenty-third Street, New York city.

At the same time the Photo-Gravure Co. of this city will issue *Sun and Shade*, a periodical "composed exclusively of plates by the finer photographic reproduction processes." Each number will have as a supplement a plate, 14x11, in copper-plate photogravure.

The first number of *Belford's Magazine*, edited by Mr. Donn Piatt, is before us. This new venture patterns after *Lippincott's Magazine* in so far as it gives a complete novel each month. In other respects it is what the prospectus led us to expect. Mr. Thomas G. Shearman furnishes the opening paper, on "Protection, the Enemy of Wages"; Mr. J. S. Moore has something to say about "Free Wool"; Mr. Henry George addresses a word "To Workingmen"; Mr. Frank H. Hurd begins papers on "Tariff Reform"; while the editor himself lays about him vigorously in his own department, discoursing of "Free Trade and Congress." Evidently, the Republican managers must reckon with *Belford's Magazine* in the coming campaign.

A special distinction of size, paper, type, illustrations, and collaboration has been achieved by the *Universal Review* in its first issue of May 15 (London: Swan Sonnenschein & Co.; New York: International News Co.). We recognize its general indebtedness to French models, particularly to the larger and costlier *Les Lettres et les Arts*. Sir Charles Dilke discusses "The State of Europe and the Position of England," having in mind the possibility of a Franco-Russian alliance as the result of Boulanger's rise to dictatorship. Emily Crawford depicts Boulanger's amiability of manner and character. Mrs. Lynn Linton analyzes those stories of Zola in which he has kept most faithfully (and also least indecently) to the *idée mère* of the Rougon-Macquart series. An anonymous writer deprecates distrust of American securities. The editor, Harry Quilter, criticises with great frankness the pictures in the Royal Academy. Earl Pembroke offers some brief considerations on the reform of the House of Lords. Classic learning is reflected in A. W. Verrall's "Roman of Greater Rome," with its metrical translations from Martial. Louis de Fourcaud vindicates, in French, Balzac's love or appreciation of music. Per contra, Daudet's new novel is begun in English ('One of the Forty'). The sum of all this prose is perhaps not very weighty. The poetry, though by Lewis Morris and Edwin Arnold, is of little worth. The illustrations, especially of the Academy paintings, are very good, being French-made. But the original sketches here reproduced as ornament are mostly feeble.

M. Salomon Reinach opens the March number of the *American Journal of Archæology* (Boston: Ginn & Co.) with an interesting comparison of an antique Greek head picked up at Smyrna with an inscribed portrait bust of Plato in the Old Museum at Berlin. A large photogravure of the former accompanies the article, and there is a little process cut of the Berlin bust. Whatever may be thought of the identification, the new head is a striking one. Mr. W. M. Ramsay contributes the second of his three papers on the antiquities of Southern Phrygia, with route maps; Mr. S. B. P. Trowbridge figures some archaic Ionic capitals found on the Acropolis of Athens, which serve as missing links in the evolution of the order; Mr. Alfred Emerson has a discursive and rather prolix article on a bronze votive offering in the Museum at Metaponto, Italy, and Dr. William Hayes Ward interprets two stone tablets, with hieroglyphic Babylonian writing, which are beautifully photo-engraved. There is the usual comprehensive and orderly miscellany of news, reviews, etc.

The eighth and ninth numbers of the current volume of *Vom Fels zum Meer* (New York: F. W. Christern) have a special interest at the present time. The first named contains a long biographical notice of the Emperor Wilhelm I., by Gottlob Egelhaaf, with a remarkable array of portraits from infancy to old age, and other illustrations, including a fine double-sheet engraving of the two Emperors whom Germany has been called upon to mourn since the year came in. This is followed by an anonymous paper on the Hohenzollerns, with more portraits, from Frederick the first Elector of Brandenburg down to Frederick III. Finally, Wilhelm I. is again the topic of an article by Theodor Braun. In the ninth number Eugen von Jagow gives brief reminiscences of the same monarch. Noticeable besides is an article on Paul Veronese, by Oscar Doering, with many illustrations.

Some useful suggestions for the teaching of rhetoric may be derived from a paper by Mr. William B. Chamberlain on literary work in colleges, based on a special inquiry made at Oberlin. It will be found in the pamphlet Transactions of the nineteenth annual meeting of the Association of Ohio Colleges (Columbus).

The Library Edition of Besant and Rice's novels (Dodd, Mead & Co.) is extended by 'Ready-Money Mortiboy,' 'The Seamy Side,' and 'The Chaplain of the Fleet.' The volume first named has an etched portrait of the late junior partner in this literary firm.

Roberts Brothers add 'Rhoda Fleming' to the Popular Edition of George Meredith's works.

Besides his 'Physiologie des Quais de Paris,' which we have already announced, M. Octave Uzanne is engaged on a 'Dictionnaire du Bibliophile,' a much needed work. His New Year's book will be 'Le Paroissien du Célibataire,' illustrated by M. Lynch.

M. Ernest Legouvé continues the publication of his "Théâtre Complet" (Paris: Ollendorff; New York: F. W. Christern). We have already noticed his volume of one-act comedies, and now comes a volume of 'Comédies et Drames,' containing "Louise de Lignerolles," "Par Droit de Conquête," and "Adrienne Lecouvreur." Most of the matter in the prefaces to these plays has already appeared in M. Legouvé's 'Souvenirs.'

M. Vitu of the *Figaro* has just issued the fifth volume of his 'Mille et Une Nuits du Théâtre' (Paris: Ollendorff; New York: F. W. Christern), in which we find the five hundredth night, and which covers only the performances of 1877. If critics are

> "miracles of learning
> Who point out faults to show their own discerning,"

we must express our wonder that any one as well informed as M. Vitu should seemingly be ignorant of the anonymous share which M. Sardou had in dramatizing Paul Féval's 'Bossu,' known in English as the "Duke's Motto" (p. 301). M. Jules Lemaitre sends forth the second volume of his 'Impressions de Théâtre,' as bright and as lively as the first. M. Lemaitre is fond of dwelling on the side-shows of the stage—the ballets, the *cafés-chantants*, the circus, and so forth; and this allows a critic the chance to suggest that he has apparently never read the delightful memoirs of Robert-Houdin, or he would not think him a representative of the old school of modern magic. The fact is, that it was Robert-Houdin who made over the whole art of conjuring.

'Paris—Histoire, Mouvements, Administration,' by M. Fernand Bournon (Paris: Colin; New York: F. W. Christern) is a young folks' history of the capital of France to be warmly recommended to all parents who are likely to take their children to the banks of the Seine. A bright boy or a clever girl would enjoy the

first part, in which the annals of Paris are sketched; and would gain a glimmering of architectural knowledge from the second part, which considers the chief buildings of the French capital chronologically. Nor would the final division, describing the organization of the city as it is to-day, be without interest. We wish that there were as good a sketch of New York, as exactly illustrated. Here are thirteen maps and one hundred and fifty woodcuts—none of them the fancy pictures only too often found in American books of the same class. M. Bournon is better equipped as an antiquary than as a literary historian; and this is perhaps the sole excuse for his strange blunder when (p. 334) he puts the famous first performance of "Hernani" at the Odéon instead of at the Théâtre-Français.

The present Servian Minister of Foreign Affairs, Mr. Tchedomil Miyátovitch, has just published, in the Proceedings of the Royal Servian Academy, a paper showing that both King Milan and Queen Natalie are descended through the family of Balshitch in the female line from Stephen Nemania, the first Servian King, who died 1159; and that thus the historical continuity of the Servian dynasty has been preserved in the present generation. It may be added that the Balshitch family is descended from the Seigneurs des Baux (near Arles), who were the ancestors of the House of Orange and furnished occupants of half the thrones of Europe. One of this family is said to have gone to the East during the Crusades, and to have founded a little principality somewhere in Albania. The Servian Academy has drawn up a plan for the preservation of public documents scattered in various places through the country, which have hitherto been greatly neglected. There is reason to hope that it will shortly publish a collection of interesting papers relating to the administrative activity of Prince Milosh, the founder of modern Servia.

The one hundredth anniversary of the birth of Vuk Karajitch, the great collector of national songs, and the founder of modern Servian literature and of the literary language, will be celebrated on August 15 (27). On the initiative of King Milan, the Government has contributed 10,000 francs towards the expenses of the celebration.

—A correspondent writes us from Chapel Hill, N. C.:

"*In re* a statement about State executive vetoes in your issue of May 31, I call your attention to the fact that in North Carolina the Governor never signed Acts of Assembly, and does not now. We had bad colonial governors, and our people have never forgotten it."

—We regret to learn of the death at Lucca, Italy, on May 31, of E. Gryzanovski, M.D., a man of very remarkable attainments, and of very brilliant qualities as a writer. In proof of the latter assertion, we might appeal to his contributions to the *Nation* during the years 1870-72. These almost untouched writings will also bear us out in stating that no foreigner in our experience ever used the English language so correctly and gracefully. Dr. Gryzanovski was, in fact, an extraordinary linguist. We learn from the London *Athenæum* of June 9 that he began life as an attaché to the Prussian Embassy at Rome forty years ago, but abandoned diplomacy for medicine, which he practised at Florence, Pisa, and Leghorn, enjoying the friendship of English residents of the eminence of Landor, Browning, Trollope, and Mrs. Somerville (Gryzanovski was, by the way, a profound mathematician). In statistics, too, he was at home, and skilled in the theory of music. Our last communication from him arose from his desire to enlist us in the crusade against vaccination.

—The first two parts of the great illustrated work on the Berlin picture gallery have just been issued by the Museum authorities. The first part deals with the Florentine school of the fifteenth century; the other is devoted to Rubens. Six full-page etchings or engravings accompany, without permanently belonging to, each part. When the work is complete, these plates will require rearrangement. They, of course, form the *raison d'être* of the publication, and challenge comparison with the engravings in similar "Illustrated Galleries," so many of which were issued in the great days of line-engraving. Some of the etchings are very good, notably those by W. Unger. We may mention especially the renderings of Rubens's "Andromeda," Velasquez's "Portrait of Alessandro del Borro," and Van Dyck's "Dead Christ." The line-engravings are delicate in general effect, but lack depth of insight into the feeling of the masters they would interpret. A number of vignettes are included in the text. These are either heliogravures, etchings, or woodcuts. The little etchings are particularly good, and the subjects chosen for heliogravure are well suited for treatment by that dangerous process. The woodcuts are not so good. That after Rubens's battle-piece is entirely inadequate to represent the powerful unfinished picture, which must certainly be considered one of the chief glories of the gallery so fortunate as to possess it. The text is contributed by Dr. Julius Meyer and Dr. W. Bode. It is, therefore, scholarly and authoritative. The essay upon the art of Italy in the fifteenth century is not light reading, but the biographies of artists are good and far more complete than might have been expected in such a work. The information about individual pictures is exhaustive, and would alone suffice to make this publication take rank as an indispensable book of reference. The text is well printed in large type on good paper.

—The April-May double number of the *Centralblatt für Bibliothekswesen* contains a useful list, compiled by H. Stein, of 189 indexes to French historical periodicals, including those devoted to such allied subjects as archæology, art, philology, etc. The titles are given with commendable fulness, and in most cases a brief note as to the utility and plan of the index is appended. The unsatisfactory index of the *Revue des Deux Mondes* receives merited condemnation, as do several others. The compiler promises a second list to include the indexes to non-historical French periodicals, and, if sufficient encouragement be received, proposes to give similar lists of the indexes to English, German, and Italian periodicals. An article by the editor of the *Centralblatt* gives a brief summary of the results obtained by Karabacek and Wiesner from their investigations among the papers of the Rainer collection, and calls attention to the recent experiments made by Martens on modern printing paper. It is stated that out of ninety-two periodicals examined by Martens, sixty-two were found to be printed on paper so largely composed of wood-pulp and other inferior materials that it is doubtful if many of them can be preserved in existence for more than a single century. Karl Trübner of Strassburg gives an interesting account of the negotiations undertaken by him, which led to the restoration of the Libri and Barrois MSS. in the Ashburnham collection to the French National Library, and the transfer to Germany of the famous Manesse manuscript, carried off from Heidelberg during the Thirty Years War, and afterwards presented to the French national collection. Among the book reviews in this number the "Bibliographical Synopsis" of the Ante-Nicene Fathers, prepared by E. C. Richardson, the accomplished librarian of the Hartford Theological Seminary, receives an appreciative notice. The second supplement number of the *Centralblatt* contains a valuable contribution to the knowledge of musical manuscripts in the Middle Ages, with special reference to work of the monks of Reichenau, by W. Brambach, and an attempt by F. W. Roth to clear up some of the confusion concerning the writings of Heinrich von Langenstein.

—The *Zoölogischer Jahresbericht* for 1886, recently issued, shows a marked change of plan, as compared with its predecessors. Instead of four main divisions, comprising over 1,300 pages, we have a single volume of about 450 pages, with 13 separate paginations; the alphabetical index is given up, and its place is taken by an index of authors, with special indexes for one or two of the chief groups. Systematic and faunal zoölogy, which occupied so large a space in former years, is omitted entirely, as are also the reports on Hungarian, Polish, and Russian literature. In the préface the editor takes occasion to censure the irregular ways of certain periodicals, and some of his remarks will bear repeating. In the interest of justice towards conflicting claims to priority of publication, he desires to call general attention to the fact that not a few periodicals, "including such well-known ones as the *Archives de Zoölogie Expérimentale*, the *Archives de Biologie*, and the *Annales des Sciences Naturelles*, follow a trade custom of giving to the completed volume the date of the first number, though several years may have elapsed between that date and the completion of the volume. Then, again, it sometimes happens (as in the case of the *Memoirs of the Museum of Comparative Zoölogy at Harvard College*, the *Archiv für Naturgeschichte*, the *Transactions of the Connecticut Academy*, etc.) that several volumes of one and the same periodical are in course of publication at the same time, their issues extending over a series of years. This must later, of necessity, lead to all sorts of unpleasant confusion. It may, therefore, be permitted to request that the custom of the *Zeitschrift für Wissenschaftliche Zoölogie* be followed, in giving on each number the date of its publication; and this date should be given in the contents of the completed volume, which should also state the year or years which it covers, not merely that for which it may originally have been intended. The question of separate reprints (or, more accurately, off-prints) also demands attention. In many cases it is only with difficulty that they can be recognized as articles from periodicals, bearing, as they frequently do, a separate pagination. It is high time to abandon this old, but nevertheless bad system. Not only should the original pagination be retained, but care should be taken to show plainly the origin of the off-print. To this end it is recommended that upon the first page a note be made of the volume, number, and date of the periodical from which it is taken. Still more to be censured is the custom followed by some authors of sending out these off-prints long before the appearance of the number of the periodical to which they belong, with the implied request that this distribution shall be considered as an actual publication. So far as the *Jahresbericht* is concerned, this cannot be done; it holds fast to the rule that only the publishers' edition of the number can be taken as determining the date of publication." It is doubtful if this protest

and request will have any effect, for the editors of learned periodicals seem to be a law unto themselves, and to have a hearty contempt for anything like regularity in their proceedings. It may not be out of place to add that, though Dr. Mayer's examples of the evils he deprecates have been drawn chiefly from American and French publications, the Germans themselves are among the worst offenders in this respect.

—One of the most noteworthy of recent contributions to the great educational discussion of the day is furnished by the May *Rundschau* in an article by Herman Grimm, entitled, "Die deutsche Schulfrage und unsere Classiker." The writer has in mind, to be sure, the German schools, but his reflections are such as to be of interest wherever people are debating the pedagogical value of the Greek and Latin classics. Grimm begins by formulating the "opinion of the public"—the opinion, that is, of those who hold that the gymnasia do not furnish the education that they ought to furnish. The two criticisms to which most attention is given, are, first, that the students do not learn German history, and, secondly, that they do not learn to handle the German language as they should. These complaints are found by the essayist to be abundantly justified by the facts. He then proceeds to contrast the present time with half a century ago, when the Greeks and Romans were really of supreme importance in education, because they supplied the student with a starting-point for high thought and high endeavor. Then, all antiquity was idealized by both teacher and learner; hence it did not seem absurd to give a great deal of attention to the battle of Pharsalia and only a little to the battle of Leipzig, since men's historical imagination somehow did not regard the actors and issues at Leipzig as belonging to the same order of events with the actors and issues at Pharsalia. But now all this is different. Historical and archæological research have brought to light a vast mass of detailed information concerning the Greeks and Romans, and in so doing have shorn them of their halo. We study them as we study a multitude of other ancient peoples. We have brought them down from the clouds and have learned to criticise and explain them in the terms of modern life. The result of all is, that they have ceased to be for the student an inspiration, and have become instead a cram to be got up for examinations. Such being the state of things, it *does* seem irrational that a German schoolboy should be required to spend so much time upon the study of ancient languages and history that he cannot be taught to wield his mother-tongue creditably, or to understand why his countrymen celebrate the anniversary of Sedan.

—All this, it may be said, is a tolerably familiar lament. The important question is, of course, the practical one, What shall be done about it? Here it is that Grimm's line of thought becomes somewhat novel. If the glamour of the Greeks and Romans is gone, he reasons, we must do something to bring it back. What gave them their importance a few years ago was the fact that they were looked up to; for what makes study profitable is not so much the knowledge obtained as the spirit which the student brings to his work. But now, the argument continues, the prestige of the ancients is not to be brought back by our present methods—neither by the pick and spade of the modern archæologist, nor by the philological hair-splitting of the modern professor. There is only one way to reach the desired end, and that is, for Germans at least, to learn to look at the ancients through the eyes of Goethe and his contemporaries. The schoolboy must learn to reverence antiquity by learning what antiquity meant to the great classical writers of a hundred years ago. Thus the classics may again become an inspiration, if not for their own sake, yet for the sake of the influence they have exerted upon the intellectual history of the fatherland. Such is the thought elaborated by Grimm, with all his well-known literary skill and breadth of historical outlook. He sums up the logic of the situation, as it appears to him, in this definite expression of opinion: "I believe that we are moving in a direction such as will ultimately make the German language and literature the starting-point of all instruction" ("Ich glaube wir treiben in einer Richtung, dass die deutsche Sprache und Literatur zu dem endlich werden wird, von dem alle Lehre ausgeht").

—The agitation which has been going on for the last few months in Italy about the name of Giordano Bruno shows that the conflict between Church and State is far more serious than Italian Liberals and Radicals are willing to admit. The question arose with a proposition to erect a monument to Bruno in the Campo dei Fiori in Rome, where it is said he was burned in 1600, at least in effigy; but it has since gone through a variety of phases, and has given rise to some absurd incidents. The original proposition was made without much reflection when the mania for erecting statues was raging in Italy—simply with the idea that it would be a fine thing to commemorate one of the apostles or martyrs of free thought in the very headquarters of intellectual slavery. There was at that time no political idea in the movement, which started with a few professors and literary men. A very small amount of money was subscribed, chiefly abroad—partly in America—and almost wholly by Protestants, who could not refuse this fine occasion of showing their contempt for the Pope. In point of fact, not enough money was raised to pay for the pedestal of the statue which a sculptor volunteered to make without remuneration. This artist is himself a violent Radical, and when the Municipal Council of Rome showed no signs of erecting his statue, and of allowing him his share of glory, he consulted his political friends, who resolved to use the occasion for a demonstration against the Pope and his claims to Rome.

—The Pope was celebrating his jubilee, and it was thought that the anniversary of the battle of Mentana would be a heaven-sent opportunity for erecting the statue, and for a display of Radical and Republican oratory. But now some of the chief supporters of the scheme, including the well-known statesman Bonghi, withdrew their support when they found that what was intended as a philosophical protest was being turned into an anti-clerical demonstration. The Radicals took up the matter throughout the whole country, public meetings were held in every large and small town, and fiery speeches were made by men who, up to that time, were totally ignorant of Bruno's life and achievements. There were innumerable articles in the journals, and every publisher thought it opportune to bring out a book or a pamphlet about the philosopher of Nola. One might have thought that some great Italian patriot was in question, and not an obscure disfrocked monk. Excitement increased to such an extent that it became necessary for the Roman municipality finally to settle the matter. Their first discussion of the subject was interrupted by the audience, but at last, on May 11, it was decided by a large vote to refuse permission to erect the statue. It came out in the course of the discussion that a bust of Giordano Bruno had been for a long time in the Pincio Garden, although none of the manifestants (if the word may be used) had ever noticed it. Luckily, it would be absurd now to crown it with flowers and laurel leaves. The worst feature of all this has been the attitude of the students throughout Italy, rendered worse by the want of firmness of the University authorities and the culpable negligence of the Minister of Public Instruction. Professors have been almost compelled to deliver eulogies on Bruno; others, who have refused or objected, have been hissed at and publicly insulted. The refusal to grant rooms in the University building for such demonstrations has brought about riots and rebellions of the students, so that it has been necessary temporarily to close several institutions of learning. Encouraged by their success in some places, the students have taken a taste for political manifestations, which led the other day at Bologna to some very disgraceful scenes.

—Two volumes of 'Souvenirs et notes biographiques,' by M. Désiré Nisard (Paris: Calmann Lévy; Boston: Schoenhof), have just been published by the family of the recently deceased Academician and literary critic. These memoirs were written for posthumous publication, apparently with the sole intention of placing in what appeared to the author to be their true light certain much discussed points in his own career, certain misrepresentations from which his memory still suffers. The manner in which he treats these ancient accusations and hatreds makes the principal interest of the volumes. Their literary value consists not so much in what they contain, interesting as that always is, as in the discussions to which they will give rise, and the consequent better understanding of a period which political passion has made legendary even in the most purely literary of its aspects. The general opinion in regard to the points in M. Nisard's life about which the most injurious accusations have been made, will probably change materially before his successor in the French Academy is elected, at the beginning of next winter; and the literary public, so large a part of which has heretofore been inimical to him, may be able by the time that successor is received there to listen with patience, if not with sympathy, to the eulogy of one who has had many enemies, who were always, it has been said, the enemies of his opinions and not of his person.

—Mr. James Gow, who has done creditable work in Greek mathematics, and is not to be confounded with the ordinary run of manufacturers of school-books, has undertaken to compress into a single volume a great amount of information, such as is presupposed in most of the editions of the classics that are intended for preparatory schools. In this compilation he has made use of the most recent authorities, and the young student will find in his 'Companion to School Classics' (Macmillan & Co.) the pith of many books in the space of less than four hundred pages. Of course, much had to be omitted, in order to make the book handy and legible. It does not take the place of a classical dictionary, there is no history of literature, no mythology; but much of the information given would be sought to no purpose in the ordinary manuals, and what is given is conveyed in its true connection, which is a great gain. The scrappy knowledge one gets from brief dictionary articles seldom abides, is seldom fruitful. At the same time, what seems to be an excellent index facilitates reference in the schoolboy's time of need. The illustrations of some of the points in textual

criticism are amusingly insular, but the book was intended for home consumption, and no right-minded man objects to local flavor.

A FAMILY LIFE OF BEECHER.

A Biography of Henry Ward Beecher. By William C. Beecher and Rev. Samuel Scoville, assisted by Mrs. Henry Ward Beecher. Charles L. Webster & Co. 1888.

THIS biography of Mr. Beecher is a volume of 713 pages octavo. A brief appendix and an index, tolerably full, cover about 25 pages, so that, in the remaining 688, the type not being very large, we have a good deal of matter. The preparation of so bulky a volume within the year succeeding Mr. Beecher's death means haste as well as diligence. The diligence would have been greater if the authors had not had recourse so frequently to quotation. They have used the scissors more freely than the pen, and generally with more discrimination. The extracts from Mr. Beecher's sermons and addresses are extremely copious, but they are always welcome. They are the best reading in the book, and their style, though frequently diffuse, and sometimes questionable upon the side of taste, is most agreeable in comparison with the style of his biographers. This surely is not good, whether we speak of Mrs. Beecher's contribution, which is confined (the acknowledged part) to an account of Mr. Beecher's courtship and marriage, or to the mingled work of Mr. Beecher's son and son-in-law. We are left entirely to the matter and the manner to decide which of the two is writing for the time being. Generally it is Mr. Scoville, whose style is marked by an effusive pulpit rhetoric, while Mr. W. C. Beecher's is that of the small local newspaper, tending to broad effects, and to that kind of wit and humor which consists in saying simple things in an involved and polysyllabic way.

Mr. Beecher's autobiographical part is in two sections. These are concerned with the most momentous situations of his life: his English round of speeches in 1863, and the Tilton complication. His account of the latter goes on for twenty-five pages and then comes to a sudden stop, while the affair is still in mid career. It was written in 1874. Confessedly, it has been much doctored by the editors, but, whether injured or improved, its quality is such that we cannot but regret that Mr. Beecher did not exhaust the matter. What his biographers have added is too much intent on fastening an opprobrious stigma upon some of his "enemies." The whole account of "the conspiracy" is very painful reading. It brings back the dreadful period of Mr. Beecher's tragical experience more vividly than to his friends in general will seem right and good. The busy years have done more for his fame than will these recollections and recriminations. Mr. Beecher's account of the matter has the accent of complete sincerity. But then how hatefully his letters and his actions lent themselves to base interpretations! How monstrous must have been the ingenuity that could turn his impulses of foolish generosity into instruments of torture for his sick and wounded heart! At times a great religious exaltation seems to have kept him strong and confident in the midst of his accumulating ills. But the impression is ineradicable that all the triumphs and successes of his life were outweighed by its one tremendous sorrow.

This sorrow would appear to have been hardly for a moment absent from the minds of his biographers. The tone of the whole book is colored by it in no slight degree. It is a tone of advocacy, of defence. Mr. Scoville and Mr. Beecher write almost continuously as if their father's greatness were a matter in dispute; as if it were necessary for them to come to his rescue with the phrases of a cheap and fulsome adulation. Their vaulting ambition frequently overleaps itself, as in the attempt to show that Mr. Beecher was the most prominent and efficient of all anti-slavery workers, and in the contention that he was the greatest preacher since St. Paul, backed by a running comparison of "the least of the Apostles" with the Plymouth pastor. Whether or not we have here errors of judgment, we have certainly errors of taste. Mr. Beecher was not himself superior to such, and some of them have been perpetuated here with excess of fairness, or unconsciously. There were elements in his nature which were as soft and delicate as the flowers he loved. There were also in him elements of coarser grain. His similes and metaphors might sometimes have been more refined without appreciable loss. It is not likely that his biographers would agree to this. A passage so grossly indelicate as that on page 599 is evidence that their own standard of good taste is not such that it would be likely to detect a fault in anything that Mr. Beecher ever said or wrote.

It is not perhaps a matter for surprise that this biography, though so voluminous, adds very little to our knowledge of Mr. Beecher's life and character. It contains no essential facts that were not reported in the various elaborate notices of him that appeared in the leading journals of the country at the time of his death. The material for such notices was abundant, a biography of Mr. Beecher having been published to celebrate his seventieth year, while his sermons and Yale lectures are full of biographical data. The present work confirms the earlier impression that few of our contemporaries have been able to indulge in personal reminiscence to the extent that Mr. Beecher did without offensive egotism, and he had himself at times "something too much of this"—too much for the unspoiled simplicity of his own self-consciousness, if not for the instruction and amusement of his congregation and the community at large.

The poverty of the book is most remarkable in a direction from which we had a right to expect a good deal that we had not had before—his correspondence. Such of his letters as are given are so delightful that our regret is greater that they are so few. And nearly related to this impression is another that is unavoidable—that of a certain solitariness in Mr. Beecher's life. The book gives this impression, but in doing so we do not believe that it is a faithful representation. We have Mr. Beecher presented to us as a famous preacher and a great public leader, and a most affectionate and happy husband and father; but in the relations of friendship he is not presented to us at all except in those that turned to bitterness. But surely Bowen and Tilton were not his only friends. He had many true and tried in Plymouth Church, if not beyond its pale, and that they make no sign is not only an injustice to their brave fidelity, but also to Mr. Beecher's appreciation of their worth; and the failure of the biographers at this point is not one of the least of many grave defects in their too hastily considered work.

A chapter of twenty-five pages is allowed to Mr. Beecher's work as a preacher. It describes the methods of his preparation and his pulpit manner, and pays some slight attention to his theology. Of course, this chapter is not exhaustive of Mr. Beecher as a preacher. There is in the volume considerable incidental reference to his preaching, especially in the chapters relating to his Western life. But evidently this aspect of his career does not touch the hearts of his biographers as does his political activity. His reputation as an anti-slavery reformer and shaper of political events is their peculiar care. It may be doubted whether their estimate of the relative merits of his preaching and his political function is an estimate that will stand fast. It is certain that his preaching is deserving of a more careful treatment than it has received. No stranger to Mr. Beecher's habits of thought and speech would ever get from these pages a just impression of the width of his divergence from the orthodoxy of his time, or of the disintegrating effect of his preaching upon this orthodoxy. As a theologian, he was vague and inconsistent, saying a thing to-day, unsaying it to-morrow; but a little patience on the part of any competent analyst would have brought out some things tolerably clear. The methods of his pulpit preparation—his subject seldom chosen before Sunday morning—were a premium upon that swift forgetfulness which is sure to overtake his sermons if it has not overtaken them already. He deliberately resigned the hope of literary excellence in them that he might increase their immediate effect. They are what we might expect from improvisation. Easy talking as well as easy writing generally makes hard reading. Harder reading than the volumes of 'Plymouth Pulpit' it would be difficult to find. Yet they abound in phrases, in illustrations, in parables, that could hardly have been bettered by the most careful predetermination. The exquisite beauty of Mr. Beecher's thoughts and fancies has little justice done to it by his biographers. They have given us enough of his more wilful and elaborate fine writing about lovely things; but it was the passing touch that best revealed the poetical quality of his mind.

If their treatment of the preacher is not satisfactory, their treatment of the editor is less so, if possible. Of his political work upon the *Independent* we have good examples. Excellent work it was, but not always excellent. There were "On to Richmond" editorials of the most heedless sort. Wendell Phillips's "slave-hound" epithet for Lincoln was hardly more abusive, and was less contemptuous, than Mr. Beecher's editorials, for which in his repentance he made large amends. But a good judge of character he seems never to have been. His biographers have given a much too favorable account of his relation to the Johnson Administration. However honorable his advocacy of a policy of the largest clemency towards the conquered South, his assignment of Johnson to the highest rank of patriotism and statesmanship, to the side of Washington in history, was a capital example of the tendency of his zeal to outrun discretion. The impeachment business was no doubt a great mistake, but that Johnson's utter political recreancy was not overrated by its most ardent promulgators is now established by a host of witnesses—Gen. Grant, perhaps, the most important. Of Mr. Beecher's connection with the *Christian Union* we have the barest mention, and that incidental to the Tilton trouble. Possibly a connection that tended strongly to be sinecure and nominal deserved little more, but the paper represented excellently well one of the most characteristic and most honorable aspects of Mr. Beecher's religious mind—his superiority to sectarian narrowness. If others did the work for which he received the credit on the *Christian Union*, it was a most efficient annex of his pulpit in its plea for unsectarian religion.

More prominence is given to Mr. Beecher as an anti-slavery agitator and reformer than as

an editor or preacher. Here his biographers would claim for him the highest distinction that he enjoyed, and indeed the highest of his time. That they should feel it necessary to make the disavowal contained in the first sentence of the following passage, has its amusing side, but there was really danger that they might not be understood:

"We do not wish it to be inferred from our words that Mr. Beecher was the only anti-slavery leader who was doing good service in those days. There were many others, and some perhaps were doing as effective work in a single line as he. But we believe that when the whole sphere of his activity was [*sic*] considered, he went far beyond any man of his time."

Mr. Scoville and Mr. Beecher are at considerable pains to clear their father of any complicity with the abolitionists. Their success is all they could desire, and their endeavor is the more significant because the claim of abolitionism is frequently put forth for those who were as innocent as Mr. Beecher of the faith of Garrison and Phillips. On page 267, comparing Mr. Beecher with the abolitionists, they write:

"He believed in love rather than hate, and most of all, with a triumphant, joyful faith, he believed in the person, presence, and leadership of the Redeemer and Reformer of the world. In all this he separated from the great body, individuals here and there excepted, of the Garrison and Pillsbury school of abolitionists."

The implication of this passage is doubly false; for it implies, first, that the abolitionists believed in hate; and, second, that the abolitionists, as such, were unorthodox, when Garrison himself was hyper-orthodox through the first decade of abolitionism, and his coadjutors were orthodox almost without exception. Mr. Beecher's own estimate of Garrison is given in a series of paragraphs which have the vice of nearly all the quotations from Mr. Beecher's writings and speeches in the book—there is no indication when they were written or whence they came. Other passages could have been quoted giving a very different and much fairer estimate.

Mr. Beecher was not a little infected with the disposition which gave Garrison so much trouble in New England—the disposition to subordinate the welfare of the slave to the glory of the Church. "My earnest desire," he said, "is that slavery may be destroyed by the manifest power of Christianity." And, again: "I would work for the slave for his own sake, but I am sure that I would work ten times as earnestly for the slave for Christ's sake." His biographers are very proud of these fine sentiments, but they will not make an equally favorable impression upon all.

The awakening of Mr. Beecher's anti-slavery consciousness was a late event. In a college discussion he took the abolitionist side against colonization, but in the West his silence only was remarkable. Once he preached two or three anti-slavery sermons at the requisition of the Presbyterian synod with which he was connected! Coming to Brooklyn, the new atmosphere was favorable to a disposition that ever had in it something of opportunist readiness or hesitation, according to the stress of time and circumstance. His biographers divide his anti-slavery work into five stages, two before the war and three succeeding. There was little need for them to bring their rhetoric or their comparisons to the enhancement of the greatness of the part he played at each of these. The simple facts and the quotations from his eloquent and impassioned speeches, sermons, and editorials, would have been quite enough. None who were active in the anti-slavery movement for ten years before the war, or as it dragged the war into the service of emancipation, will fail of gratitude to the writers who, with whatever incidental faults, have given them another opportunity to live over again the ardors and enthusiasms, the hopes and fears and passionate anxieties and glorious triumphs of those years, all of which Beecher saw, and a very great and helpful part of which he was.

There are many interesting portions of the book of which we cannot speak. The childhood and youth of Mr. Beecher are elaborately treated. His intellectual development was very slow. The chapters on his country life and personal traits contain much interesting matter. His passion for precious stones was a remarkable trait. He always carried a number about with him, and their colors were as soothing to him as strains of music.

There are twenty illustrations in the book besides the steel-engraving frontispiece from which every line that thought and care had made is stippled out. It does not compare with the wood engraving after Dielman's portrait that appeared in *Harper's Weekly* at the time of his death. The other illustrations are woodcuts. The most of them are pictures of Mr. Beecher from various photographs. Either the engraving or the printing has produced a miserable result in almost every case; or are they both in fault? The picture of the church as decorated for the funeral is a pitiful travesty of what was really very beautiful. Funeral services are said to have been held in "the three nearest adjoining churches" as well as in Plymouth Church. Churches in the near vicinity are meant.

It is greatly to be hoped that a biography of Mr. Beecher will be written at some future time more worthy of his genius and his fame than this which bears so many marks of haste, and for which the affection and the warmth of the biographers were no sufficient qualification. But the saying is, "A man cannot be hid," and the man that Beecher was has been only partially obscured by the effusion and the zeal of those who have imagined themselves set for his defence. His splendid animal spirits, his immense good-nature, his facile intellect, his cordial sympathies, his glowing eloquence, his broad humanity—all these illuminate the veil, and manifest themselves so clearly that often we forget that any veil is there.

RECENT LAW BOOKS.

THE enterprising "West Publishing Company" of St. Paul has done well in republishing Prof. Pomeroy's very interesting, important, and valuable essay on water-rights and riparian privileges in the Pacific States. It appears now, revised and edited by Mr. Henry Campbell Black, and is divided into sections, and accompanied by much illustration from later cases at the hands of the editor. The exigencies of mining in a new country, as carried on by a horde of people suddenly rushing in, gave rise to very important departures from the common-law doctrine of riparian rights. And the extreme importance of water for purposes of irrigation in such a State as California has raised questions of the greatest gravity and difficulty as to the respective rights of riparian owners and of others who live away from the stream. Of the "wonderful transforming powers of water," the author gives an illustration from his own observation, when,

"after riding . . . a whole day over the foot-hills, parched and brown and barren, I drove the few miles from the ferry at Merced Falls to the village of Snelling, through what was in fact a rural paradise, through green fields, roads overarched with rows of magnificent trees, and door-yards filled with flowers—all the effect of irrigation obtained from the Merced."

"In the great San Joaquin Valley, east of the San Joaquin River, . . . which at times seems to be an expanse of dry sand, there is hardly an acre which cannot be reached by a well-constructed system of irrigation, utilizing the water of the streams which rise in the high *Sierras*, cross the valley at nearly equal intervals, and empty into the San Joaquin. With such irrigation, the whole valley would be, perhaps, the most fertile district in the world."

In such a state of things the limits of the power of individuals and of the States to divert and consume the water of these streams is one of the greatest interest. Prof. Pomeroy, a writer who always helped forward any discussion upon which he entered, threw much light upon the questions here suggested. After stating the common-law rules upon the subject of water-rights, he examined the peculiar local doctrine of "appropriation," under which a first occupant, although not a riparian owner, may divert water from a stream or inland lake, situated upon the public lands, for any purpose, and wholly consume it, and this even though he should take the whole of it. As regards the rights of owners on what are called private streams, where no such appropriation had taken place, it appears that in seven of the Territories statutes make these owners liable "to have perhaps the entire stream appropriated and diverted away for the benefit of a proprietor whose land is situated at any distance from the stream." In California and Nevada this legislation had not taken place; and, in considering what laws should be adopted there, Prof. Pomeroy urges that the natural rights of riparian owners should be preserved, while all relief consistent with these should be afforded to other landowners needing irrigation. He appears to think it not altogether clear that irrigation for the benefit of any number of landowners, not constituting a separate municipality, would constitute a public purpose within the meaning of our constitutions, in regulating the exercises of the right of eminent domain. But that seems a refined sort of a doubt. The immense importance of irrigation in the States of which the writer is speaking is well set forth, and the total failure of the principles of our inherited common law to meet the matter; it would be difficult to state a thing which is more distinctly one of public concern, in such a country, than securing irrigation for vast tracts of land otherwise a desert.

It is singular to read of the slowness of courts and legislatures to check the operations of the hydraulic miners. This, as formerly carried on, seems now to have been declared a public nuisance; but the editor tells us that the first case of importance was decided in 1884. In that case it appeared that this terrific process of washing away whole tracts of country into the rivers had "filled up the natural channel of the Yuba above the level of its banks and of the surrounding country, and also of the Feather below the mouth of the Yuba, to the depth of fifteen feet or more. It has buried with sand and gravel and destroyed all the farms of the riparian owners on either side of the Yuba, over a space two miles wide and twelve miles long." A great deal more it had done of the same sort; and these evils were increasing. The reader wonders what kind of a population of saints and angels it was that lined these rivers, that they should submit to such things so long.

The law of sales of personal property still offers an excellent field for a thoroughly searching

book. Mr. John F. Baker, in his 'Treatise on the Law of Sales of Goods, Wares, and Merchandise as affected by the Statute of Frauds' (Chicago: Callaghan & Co.), has chosen one of the most perplexed parts of the subject, and he has produced a useful book. The practitioner will find here the important cases, down to the latest ones; and the author's method of making large quotations and statements from the cases in his text puts the reader in possession of much material towards the formation of correct opinions. But Mr. Baker has very imperfectly mastered his own material, and is but a poor guide through all this maze. He shows little apprehension of the historical relation of the cases, and small sign of any deep study of his subject. Yet the lawyer in search of cases, and the student who has already got the clue to them, will find the book of real service.

The second edition of Mr. S. W. Worthington's 'Treatise on the Statutes of Elizabeth against Fraudulent Conveyances, the Bills of Sales Acts, 1878 and 1882, and the Law of Voluntary Dispositions of Property' (London: Stevens & Haynes; Boston: Houghton, Mifflin & Co.), has been adapted to the considerable changes of the last fifteen years and largely rewritten. It contains references to American cases and to some of our treatises, as Bump on Fraudulent Conveyances and those of Story and Kent. An appendix has the full text of both the statutes of Elizabeth and of the Bills of Sales Acts of 1878 and 1882; and also nine short cases (1700-1733) "from the Coxe and Melmoth MS. reports." This book appears to have been prepared with thoroughness and minute care. Indeed, the author says of the present edition, "No pains have been spared . . . to include every [English] case which may appear to bear upon its subject-matter." A valuable feature of the index of cases is the citation of various places where the case is reported—a thing of great service to one who has occasion to make a thorough study of a case. It seems a pity that the author did not carry this a little further and make it include every place. In point of printing, this is a fine specimen of a law book; and, in the substance of it, it appears to be what its author aimed at, "a complete and trustworthy book," as regards the main topics of which it treats.

A very important and interesting topic is dealt with in Mr. Lewis Hochheimer's 'Law relating to the Custody of Infants' (Baltimore: John Murphy & Co.), a valuable and highly useful book. The author has quoted largely from the cases, and he gives good reasons for it:

> "In the discussion of a branch of the law that, to a greater extent than any other, calls for the direct application of legal principles to the facts and circumstances of particular cases —where, in other words, the place occupied in other branches of municipal law by fixed general rules and settled doctrines is to the greatest extent superseded, in the determination of controversies, by direct reference to legal reason and legal principle—the facts of cases and the reasons advanced for judgments rendered assume unusual importance. Great care has, therefore, been taken in this book to state fully and accurately the facts of important cases, and the language of the courts is, in numerous instances, freely quoted."

The author has compared the English law with the freer American development of it, and has handled the cases with skill and judgment. This book illustrates the advantage there is in allowing to the courts a large discretion in administering the law. It is one of the greatest faults in our American legal administration that we tie up and hamper our judges so much—a sort of confession that we do not believe in their courage or learning, or fitness for their work. This, to be sure, is likely to be a fit and just confession, in a good proportion of cases, where judges are elective. This book is well printed, but it would have been well if something had been saved by having the paper less thick, and something spent in having the binding better.

Great improvements have been made in a new American edition of Benjamin on the Law of Sale of Personal Property, "Bennett's Edition" (Houghton, Mifflin & Co.). The last American edition was the fourth; we know not why the publishers now abandon the numerical name for the new edition—that is hardly one of the improvements, for several of the former editions have been edited by Bennett. The improvements alluded to are a considerable reduction in the size of the volume (by more than 140 pages), and the rewriting of all the previous American notes, and placing them in the form of monographs at the end of the different chapters. An index should be furnished to these American notes; they comprise, in all, something over 170 pages of pretty close print. Of these notes Judge Bennett, the editor, modestly says that they "may or may not be satisfactory to the reader, but they are the result of some honest personal work." They will certainly be very helpful to the reader, whose chief regret will be that the writer is too sparing of contributing his own effort to settle disputed questions and to explain differences. The extensive collection and convenient arrangement of the authorities, however, the clear statement of cases, the evident familiarity of the author with the important discriminations that belong to the subject, and his summing up of the general result of the decisions, make this large body of notes very valuable. It is much the best of the various editions of Benjamin's excellent book with which we are acquainted. It is strange not to find in this edition any reference to the recent English case of Page vs. Morgan, a very important, if somewhat dubious authority on the doctrine of "acceptance and actual receipt." There are a number of important misprints in the index.

Mr. A. Parlett Lloyd of the Baltimore bar has furnished a convenient and useful book, in his 'Treatise on the Law of Building and Buildings' (Houghton, Mifflin & Co., pp. li., 618). It belongs to a class of legal handbooks which aim to be of service to busy practitioners in a very practical way, without aspiring to help them by offering the results of any deep research or reflection. The absence of any special American treatise on this subject is regarded by the author as "possibly the most remarkable omission in the literature of law in this country." About a quarter of the book is devoted to "Building Contracts," somewhat less than that to "Building Leases," and, again, to "Easements relating to Buildings"; a still shorter consideration is given to "Mechanics' Liens." Added to all this, and of very great practical convenience, are a "Digest of Leading Decisions and Cases on Building Contracts in the United States," and, as regards mechanics' liens, the "Statutory Provisions of all the States and Territories." A serviceable appendix of some fifty pages contains a Glossary of Terms used by architects and builders, and a collection of forms. Much care seems to have been taken to make the book a helpful one. If the Glossary should be thought not merely serviceable, but superserviceable in offering a definition of "arch" and "pig-iron" and "vestibule," on the other hand, a layman may thank it for certifying him as to "astragal" and "strut," to say nothing of "scantling" and "ashlar."

The late Prof. Leone Levi's 'International Law, with Materials for a Code' of that topic (D. Appleton & Co., pp. xii, 346), is a valuable addition to the "International Scientific Series." The author wrote with the aim of helping "to reduce into the form of a code the leading principles of the Law of Nations," and of adding something to what others have attempted: "their works did not include the positive portion of the law—that resulting from treaties and conventions." The work seems to us happily devised, instructive, and calculated to be very useful. There are two preliminary chapters, one of an historical nature, and the second setting forth the "political condition" of the different states of the world, with statistics as to population and extent of territory. This last chapter, in the slight statements which it attempts here and there of the treaty relations of these different states, should perhaps have had more regard to the wants of readers in this country. The body of the work is made up of what the author modestly calls "Materials for a Code of International Law," consisting of 499 brief articles. Considerably more than half of this part of the book (fourteen chapters) relates to treaties, and to "treaty clauses on particular subjects." There is also a valuable chapter on private international law. This little volume has, of course, but a general and brief consideration of its subject; but within the limits which it has assigned itself, it seems to us a book of much value. In these days of telegraphs and treaties, and international postal unions and monetary unions, we are all, in a new sense, citizens of the world; in such a book as this we may easily come to a better understanding of our new relations.

'Pratt's Manual of Banking Law' (Washington: A. S. Pratt & Sons; pp. vi, 179) is said upon its title page to be "designed as a clear and accurate statement, in a small compass, of the general principles of banking law and the duties, powers, and liabilities of bank officers." The book appears to have been carefully prepared by a competent person, and to accomplish the design above set forth.

A commentary on the existing Federal legislation upon an important topic is furnished in the 'Removal of Causes from the State to Federal Courts,' by Emory Speer, United States Judge for the Southern District of Georgia (Boston: Little, Brown & Co.; pp. 136). It is called out by "the enactment of sweeping changes in the jurisdiction of the national courts by the Act of Congress of March 3, 1887." This act, and the other chief statutes of recent years of the same sort, belong to what the author calls "the ominous dates March 2 and March 3," and they justify his animadversions upon the habit of "our national law-makers to reserve for the feverish wrangle of the last hours of the Congress" the handling of such delicate and extremely important subjects. The details of this book are not for our columns, but we can speak cordially of the pains and good sense and thoroughness which are shown in its brief but, as it would seem, sufficient discussion of a perplexed matter. In appendices the author gives the Act of 1887 in parallel columns with the then existing legislation; a set of forms; and, in a very instructive and helpful tabular form, "the essential elements" of the jurisdiction of the Circuit Court of the United States under the Removal Acts of 1867, 1875, and 1887.

Mr. W. Hastie's 'Outlines of the Science of Jurisprudence' (Edinburgh: T. & T. Clark; New York: Scribner & Welford; pp. xliv, 282) consists of translations from the Juristic Encyclopædias of Puchta, Friedländer, Falck, and Ahrens. The translator quotes Prof. Sheldon Amos as saying that "modern jurisprudence is emphatically a German creation," and adds:

"To give an introduction to the elements, methods, and forms of that creation is the main purpose of the present effort." One may agree with Mr. Hastie as to the very great advantage that is likely to come to the English law from a better acquaintance with German authors than is common, and yet may heartily regret that he should have chosen the mainly arid and repellant articles which are here translated. One of them begins thus: "Science is a living organism, and has, as such, a supreme positive principle of life. The essential function of scientific encyclopædia is to show what is the idea that animates the several members of this organism," etc. *That*, we venture to think, is not the way to approach the colts that are grazing in the pastures of the English law, and still less their elders. And yet it is perfectly true that Germany has much to teach us before we shall thoroughly understand our own law; and we are glad to see that Mr. Hastie proposes soon to publish a translation of Brunner's 'History of the Sources of the Law of England.' Would that he might follow it up with the same author's incomparable 'History of Trial by Jury.'

The Rev. Dr. A. H. Lewis's 'Critical History of Sunday Legislation from 321 to 1888, A. D.' (D. Appleton & Co.; pp. x, 279) is an excellent addition to the literature of the Sunday question. The calling of the author might lead one to expect an endeavor to enforce certain opinions upon that subject; and, in his brief preface and at the beginning of the book, he does intimate a view that Sunday legislation is put upon too low a ground nowadays: "Either the people in the churches and out of them increase in wickedness, . . . or else there is something radically defective in the claims by which Sunday observance is supported. The explanation lies in this last fact. It is wise, therefore, to seek the origin and philosophy of Sunday legislation as they appear in history." And again: "Some now claim that Sunday legislation is not based on religious grounds. This claim is contradicted by the facts of all the centuries. Every Sunday law sprang from a religious sentiment. . . . To say that the present Sunday laws do not deal with the day as a religious institution is to deny every fact in the history of such legislation. The claim is a shallow subterfuge." But these passages are about all there is in the book which indicate that the author has a case to make out. It is a fair, learned, impartial, interesting, and instructive collection and summing up of Sunday legislation, from Constantine's injunction to rest on the day of the sun-god down to the present year. The last chapter has a brief summary of the legislation of all our States and Territories, and the work is crowned with a full index. A lawyer will find some questions raised in his own mind which are not here answered. How was it, after all the guards thrown around the Sunday by old decrees and laws, that the English courts used to do business on Sundays? In Bracton's 'Note Book' and in the new Selden Society volume several cases occur, of the thirteenth century, where the King's courts appear to have been sitting on Sunday. In the next century the 'Mirror' complains of this sitting on Sunday as an "abusion." And even as late as 1465, in the Year Book of Edward IV., it looks as if the same thing went on. Was this by reason of a dispensation, such as Blackstone mentions, or of special circumstances not recorded?

Prof. Christopher Stuart Patterson of the University of Pennsylvania has published a clear and useful book in his 'The United States and the States under the Constitution' (Philadelphia: T. & J. W. Johnson & Co.; pp. xxxi, 290). The author indicates the character of the work when he says: "Its only purpose is to show by a classification and an analysis of the judgments of the Supreme Court of the United States what the relations of the United States and the States are under the Constitution, as judicially construed by the courts of last resort." The reader will be struck with the intelligent and candid way in which controverted questions are discussed, and with the careful manner in which the cases have been collected, stated, and arranged. The book is a helpful guide to the doctrine of the Supreme Court on the leading topics of constitutional law; and rather more than half of it is contained in the two chapters that deal with the regulation of commerce, and impairing the obligation of contracts.

We will mention a few points in which the work seems open to criticism. In § 125 the statement seems inaccurate that "In the order of supremacy, treaties, duly ratified, are of inferior authority to . . . constitutional acts of Congress." Is it not rather true, as the Supreme Court (Swayne, J.) says, in The Cherokee Tobacco, 11 Wall, at p. 621, that "A treaty may supersede a prior act of Congress, and an act of Congress may supersede a prior treaty"? In § 12 the author says that, "Until . . . 1862, . . . neither statesmen nor jurists had asserted that Congress had . . . the power of making anything but gold or silver coin a legal tender." If this be so, nothing can show better how little close scrutiny had been given to the subject, for it is manifest upon the face of the Constitution that Congress is not limited to these particular kinds of coin. In §§ 12 and 13 the author seems to allow more force than it deserves to the argument that, if the power to "coin money" be regarded as an *express* power to issue a metallic legal-tender currency, it is an implied prohibition to issue a paper legal-tender currency. This point, like almost all others involved in the legal-tender controversy, was admirably handled by Judge Hare in a powerful but little known opinion, in 1864, in the case of Borie vs. Trott, 5 Philad. Rep., 366. "All that can safely be inferred," he says, "in the case of such an instrument [as the Constitution], from an authorization to use a particular means, is not that other means are forbidden, but that this should, if the case requires it, be used." The index of cases is somewhat carelessly arranged. Let any one try, for instance, to find the case of the Charles River Bridge vs. the Warren Bridges. But we will not leave so good a book with fault-finding as our last word; rather with the expression of a confident expectation that the author will hereafter build more upon so good a foundation.

Mr. Joel P. Bishop, the well-known legal author, has printed, with notes and a supplement (Chicago: T. H. Flood & Co.), his Address on 'Common Law and Codification,' delivered before the South Carolina Bar Association at Columbia last December. Mr. Bishop wages an irreconcilable conflict with the advocates of codification. In his view, it was the sin of codification that brought death into the Roman world, and all their woe. Codification seems to him to put an end to reason in the law, and to jurists. It is, he says, the function of jurists, as distinguished from judges, to ascertain just what and how many are the elementary principles of the law, reduced to their smallest proportions. He is very severe upon a class of legal writers whom he terms "pirates," and he speaks of himself as having passed "about forty years, not in writing the jurist works I am calling for, but in contributing thief-food, which, I trust, is performing its humble part in the fattening for a slaughter, whereby the advent of jurists will become possible." His opposition to codification *now* we take to be wholly sound: "If our common law is to be turned into statute law, in all decency let it first be made ready for the metamorphosis. Give it jurists, and let them discover and set before us, duly arranged and condensed, its principles. Do not codify a medley." The jurists, it may be added, will have much to do in the way of an ordered historical exploration of our cases before they can do their work properly. This business is quietly going forward now, and it is putting a soul under the ribs of death. Ignorant jurists are not what we want.

HINSDALE'S OLD NORTHWEST.

The Old Northwest: With a View of the Thirteen Colonies as constituted by the Royal Charters. By B. A. Hinsdale, Ph.D., Professor at the University of Michigan. New York: Townsend MacCoun. 1888. 8vo, 440 pages, 11 maps.

THIS is a centennial volume, published one hundred years after Gen. Rufus Putnam and his forty-seven associates landed on the site of Marietta, April 7, 1788, to live under the "Ordinance of 1787." The "Old Northwest" is defined, in a note to page 280, as embracing the States of Ohio, Indiana, Illinois, Michigan, and Wisconsin, Minnesota east of the Mississippi, and the Erie purchase in Pennsylvania—in all, 265,878 square miles, with a population in the five entire States alone of 11,206,668 by the census of 1880. A country of such extent, and which has in one short century filled up with so many millions of human beings and their teeming wealth, studded over with schools, colleges, and churches, crossed by 50,000 miles of railroad, is worthy of a history. A hundred years ago it contained a few squalid settlements of French *habitants* at Detroit and Sault Ste. Marie in Michigan, at Vincennes and Terre Haute in Indiana, Kaskaskia and Cahokia in Illinois—oases in a desert of roving red savages. With good old-fashioned Fourth of July patriotism, our author has devoted his last and longest chapter to the startling figures denoting this progress, drawing freely on the compendium of the last United States census.

In the opening words of his preface, Prof. Hinsdale thus justifies his undertaking: "Save New England alone, there is no section of the United States, embracing several States, that is so distinct an historical unit, and that so readily yields to historical treatment as the 'Old Northwest.'" Although our author does not pursue the story of the several States beyond their admission into the Union (except in noticing the attempt made in 1823 to turn Illinois into a slave State), the reader of his volume will charitably assume that his group of States does not readily yield to historic treatment as a unit, rather than conclude that the author was unequal to an easy task. He has produced not so much a book as a medley of detached historic essays, reaching back to the first discovery of the North American continent. There is no attempt at or any pretence of independent research. The matter of the story is taken from easily accessible sources—the best passages from Bancroft's History, from Hildreth, or from McMaster; in fact, a few literal extracts from Bancroft are the most readable parts of the book. The style, at its best, strikes us as a studied imitation of the splendid antitheses and clever transitions of Macaulay; often it sinks into newspaper gush, sometimes into slang. Of Macaulay's great art of exciting

admiration of historic personages, our author possesses but a very slight share. The maps are mainly copied from Labberton's New Historical Atlas; they are neatly executed and easily understood.

With all its want of originality, of style, and of historic method, the book is both useful and entertaining. Very few people read Bancroft; McMaster, though treating of the weightiest events in American history and entertainingly written, is in comparatively few hands. The one merit of Prof. Hinsdale's book is, that it fixes the reader's attention on the three "providential" turns in the history of the Northwest —for he maintains that whoever does not see the hand of Providence here, will see it nowhere in the annals of mankind.

First, that the Northwest, explored and conquered by French priests, soldiers, and trappers, became English. He says (p. 68) rather effusively, and giving credit to Mr. John Fiske for the conception:

"We must not allow our admiration of what the French had done in the West to blind us to the fact that the British cause was the cause of the Northwest of America. . . . Montcalm and Wolfe were both gallant soldiers and able commanders, . . . but they stood on the Heights of Abraham that September day for very different things: Montcalm for the old régime, Wolfe for the House of Commons; Montcalm for the alliance of King and priest, Wolfe for habeas corpus and free inquiry; Montcalm for the past, Wolfe for the future; Montcalm for Louis XV. and Madame de Pompadour, Wolfe for George Washington and Abraham Lincoln."

After having, by the Treaty of Paris, driven the French not only out of the country between the Ohio and the Great Lakes, but out of Canada too, the British Crown, by proclamation, forbade any new settlements or appropriations of land west of the Alleghanies, on the pretext assigned by its advisers of avoiding war with the powerful Indian tribes who occupied the great West; but, as American patriots believed, from fear that the colonies might become too populous, too strong, and too independent. After long-continued efforts, Doctor Franklin in 1772 induced the British Ministry to modify its policy, and to authorize the establishment of two colonies west of the mountains; but before the charter passed the seals, revolt broke out in Boston, and British initiative in America ceased for ever. However, Lord Dunmore, the royal Governor of Virginia, holding large interests in Western lands, pushed to the last moment of his authority the Virginia settlements beyond the Kanawha. Yet when the war broke out, there were no English settlers beyond the Ohio, and the recognition of American independence could not, on the usual rule of *uti possidetis*, have entitled the Americans to an acre of that magnificent heritage of freedom.

Here came the second turning point in Northwestern history — the expedition of George Rogers Clark, who left the falls of the Ohio for the Wabash in June, 1778, with two hundred men, and occupied Kaskaskia and Vincennes with the assent of the *habitants*. He was anxious to proceed to the conquest of Detroit, but could not obtain the needful force; and that point remained in British hands till evacuated in 1796 under the Jay treaty. A footnote to page 155 tells the sad story of Señor Vigo, a St. Louis merchant who advanced $12,000 to Clark upon drafts on New Orleans. These were protested. The loan enabled Clark to conquer the Northwest for the great Republic, which was so ungrateful that Vigo's heirs were not repaid till 1876.

Of course, the fate both of the Northwest and of the Southwest was decided by the negotiators at Paris, in the weary months which passed between the news of the surrender of Yorktown and the definitive peace. The courts of France and Spain were but too willing to betray their American allies, and proposed to annex the Northwest to British Canada, while turning the South between the Alleghanies and the Mississippi into a sort of neutral zone, an Indian territory, partly under Spanish, partly under American, protection. The map at page 176 of our volume shows the slender proportions which this proposal would have given to the new nation. The firmness of Dr. Franklin and Adams, aided by the good will of the British Whig Ministry, saved the West to freedom and to prosperity. Lecky says on this subject (vol. iv, p. 273):

"The question of boundaries, however, presented great difficulty, and Shelburne determined, probably wisely, that he would if possible lay the foundation of future friendship by acting as liberally as possible in this concession. The vast unsettled Western country was acknowledged to be part of the United States, England only retaining the right of the free navigation of the Mississippi, which was made the western boundary."

The third question in the fortunes of the Northwest was still open. It was American, not French nor British. But the territory was claimed by New York, Virginia, Connecticut, and Massachusetts, while the statesmen of the small seashore States, especially of Maryland, Delaware, and New Jersey, insisted that the unsettled West, having been conquered by the common blood and treasure, belonged to the United States. This contention had gone on during the war of the Revolution, and had caused Maryland to stand out until 1781 from joining in the Articles of Confederation. Our author is pretty full, and often tries to be eloquent, in speaking of the long contest of the sea-to-sea colonies among themselves and with their less fortunate sisters, and of the land cessions made by New York, Massachusetts, Virginia, and Connecticut, which closed it; but his highest pitch of enthusiasm is reserved for the crowning act in the Northwestern drama—the ordinance of July 13, 1787, which for ever excluded slavery from the vast expanse between the Ohio River and the lakes. The two heroes whose praise is sung by Prof. Hinsdale are Dr. Manasseh Cutler, founder of the Ohio Company, by whose efforts the ordinance was carried through Congress, and Arthur St. Clair, the first Governor of the Territory. St. Clair was removed by President Jefferson in November, 1802, a few weeks only before the recognition of Ohio as a State would have put an end to his Federal Governorship. He was removed for "offensive partisanship," in fact, "for observing in an address lately delivered by you," as Secretary Madison writes to him, "to the Convention held at Chillicothe, an intemperance and indecorum of language towards the Legislature of the United States, and a disorganizing spirit and tendency, of very evil example." St. Clair retired to his "Hermitage," near Ligonier, Pennsylvania; but his creditors, men who had lent him money for the service of the Government, swept it away; they took even the pension, tardily granted him for his gallant services in the war.

"Pathetic in the extreme are the glimpses that we have of his last years. Hon. Lewis Cass, who had known him in happier days, found the old soldier and civilian in his rude cabin eking a livelihood by selling supplies to the wagoners on the road. . . . To him who is acquainted with St. Clair's history, the name always suggests a striking example of ingratitude of men and of republics" (p. 313).

Not to speak of the other merits of the Ordinance of 1787, its chief glory rests on its well-known sixth article of *compact:* "There shall be neither slavery nor involuntary servitude in the said territory otherwise than in the punishment of crimes whereof the parties shall have been duly convicted." The high importance of this short clause can only be estimated when we consider the efforts which were made first in Ohio, then more than once in the Territory of Indiana, and finally in Illinois, both as a Territory and as a State in the days of the noble Governor Coles, to legalize slaveholding. The restraining influence of the "Compact" decided the long and often doubtful battle in favor of freedom. With a slaveholding Northwest, with slaveholding Illinois, the days of emancipation might even now lie in the dim future. Our author does not tell the glorious deeds of Gov. Coles as eloquently as do Lincoln's biographers in the *Century*, yet he says of him: "All in all, it does not seem extravagant to say that Mr. Coles's arrival in the State, in 1819, was more important in its results than the arrival of any other man since Clark summoned Kaskaskia to surrender in 1778" (p. 363).

A separate chapter treats of the Connecticut Western Reserve. When first speaking of the strip of 120 miles along the lake, of which Connecticut reserved to herself the soil, our author, with much pride and small gratitude, points out a blunder in Bancroft. "Grayson (who opposed the acceptance of the cession) can be excused for magnifying 3,250,000 acres of land into 6,000,000, as the geography of the Lake Erie was not then carefully (!) known; but what shall we say of Mr. Bancroft, who repeats the blunder in the last edition of his history?" (p. 248).

American Fishes: A Popular Treatise upon the Game and Food Fishes of North America, with especial Reference to Habits and Methods of Capture. By G. Brown Goode, Assistant Secretary of the Smithsonian Institution. New York: Standard Book Co. 1888.

THERE is certainly a need for just such a book as this of Mr. Goode's for popular use, for the angler as well as the ichthyologist, and treating of the humble as well as of the aristocratic fishes. Of course, it would be impossible to discuss in one volume the 1,750 species of fish that Mr. Goode says are indigenous to our continent, and he has excluded all but those which have value for sport or food. The tarpum or tarpon is mentioned in the former class, to which he has of late been discovered to belong most emphatically. Strange to say, the sturgeon is left out, though in addition to his economic uses he has, within the last year or two, shown instances of his capacity for yielding great sport to the angler. The opening chapter is on the perch, which Mr. Goode thinks does not hold a high enough place as a food or a sport-affording fish.

The chapter on striped bass is worthy of the high character of this fish, and an interesting feature is an illustration from a photograph of twelve bass "caught off S. W. Bridge, Newport, in two hours and five minutes with rod and line—average weight 43⅝ pounds." The spelling of bridge with a capital B gives a desirable flavor of uncertainty as to whether they were all taken with the *one* rod and line which appears in the picture. Among the most entertaining chapters to the general reader are those on the sheepshead, the bluefish, the squeteague or weakfish (called on the southern coast the sea-trout), and the black bass. More is generally known about the qualities of these fish for the angler than of many other kinds, and one ought from the book alone to know how, when, and where to catch them. Mr.

Goode in the "pike" chapter has, along with all other angling writers, been unable to resist quoting Gesner's well-worn tale of the nineteen-foot fish.

The last fifty pages are devoted to the salmonidæ, and begin with a most interesting instantaneous photograph of a salmon leaping up a waterfall. There is, on page 447, a statement made by a Norwegian observer, of the height to which salmon can leap, which appears incredible. Dr. Landmark, who is quoted, says that two masts have been placed across the Drams River. These masts are three and a half feet apart horizontally, and the Professor states that he has seen a salmon jump from the river sixteen feet below across both masts. This is about twice as great a leap as any of those recorded by trustworthy British or American observers. Mr. Goode says:

"I am inclined to the view that the natural habitat of the salmon is in the fresh waters, the more so since there are so many instances—such as those of the Stormontfield ponds in England—where it has been confined for years in lakes without apparent detriment. . . . The salmon of Lake Ontario and its tributaries are thought not to enter salt water," etc.

How can the "natural habitat" of any anadromous fish be either fresh or salt water? Does Mr. Goode mean that the salmon violates his natural tendencies when he goes to the sea, and is in a manner forced to migrate thither? and can he name a single instance in which a salmon has failed to go to the sea after spawning, when possible to do so? Do the salmon which he says are confined in the Stormontfield ponds without detriment, ever breed there the second time? and what authority has he for saying that the Lake Ontario salmon are thought not to go to salt water? There is easy access to the sea from Lake Ontario through the St. Lawrence, and salmon were formerly abundant there. Their way to the upper lakes is shut off by Niagara Falls, and no salmon are or ever have been found in Lake Erie or the lakes about it. Of late years some of the depleted rivers tributary to Lake Ontario have been restocked by the Canadian authorities with the result of again bringing salmon there. A number of streams tributary to the upper lakes have also been stocked with salmon fry within the past ten years, but no salmon has been seen. It has also been established in the past few years that salmon do not, with any uniformity, return annually to "their natural habitat," fresh water, but sometimes stay in the sea two years and perhaps longer. On page 446, Mr. Goode says: "The absenteeism of salmon [from fresh water] is due principally to the dearth of desirable food in the rivers"; therefore we may suppose that the prevalence among salmon of conduct supposed to be peculiar to Irish landlords is justifiable, though the term does convey a tinge of reproach.

These statements on the interesting question of the habits of the salmon are astonishing for any scientific man to make, and detract much from the authority of an otherwise excellent book.

Taxation. Its Principles and Methods. Translated from the 'Scienza delle Finanze' of Dr. Luigi Cossa, Professor in the University of Pavia, Italy. With an introduction and notes by Horace White. Together with a compilation of the State Tax System of New York and Pennsylvania. G. P. Putnam's Sons. 1888.

If one may distinguish between the books that teach and the books that educate, Prof. Cossa's 'Science of the Finances' belongs to the latter class. The author never dogmatizes, and never attempts to suppress or belittle the arguments which weigh against his own conclusions. The student must constantly estimate the relative weight of opposing considerations. Those who allow that "the principal and most characteristic difference between one human intellect and another is the ability to judge correctly of evidence," and who also recognize how little the training of this faculty is attempted in our colleges, will appreciate at once the educational value of Prof. Cossa's method. The many-sided treatment which he gives is peculiarly desirable in considering the questions relating to taxation. No subject affects individual and class interests so vitally, and hence none has been so distorted by special pleading. The false and confused views to which this special pleading has given rise are largely removed when all sides are given a fair hearing. No remarkable judicial acumen is then needed to discern many principles as clear as the law of gravitation, and which would have been admitted long ago had not their recognition played havoc with certain vested "rights."

The faults of Prof. Cossa's work are those of style. It is constructed upon the German model. The author has the German professor's love of keen discrimination and elaborate classification. In making clear and distinct the outlines of his subject, his method is that of the anatomist, and not that of the artist. He dissects instead of portraying; and though he always cuts at the joint and never into the bone, it is only the scientific student who can appreciate and enjoy his work. The absence of literary flavor is further occasioned by the severe condensation which is one of the admirable characteristics of the work. Then, too, the treatment of the subject is always abstract. The fact that the book is written from the point of view of an Italian does, indeed, often lend a peculiar interest; but one misses the concrete statement of significant facts regarding the economic condition of Italy.

Turning for a moment to the matter of the book, one notes that the author rejects the Manchester doctrine that the duties of the state are simply those of protecting life and property, yet does not belong to the new school which teaches that taxation is a practicable and desirable method of bringing about a more equitable distribution of wealth. One of the duties which he assigns to the state other than those of "the night-watchman" is the control of railways and telegraphs. Yet he is so far from being Socialistic in his tendencies, that he classes the school taxes among those to be paid upon the principle of fees, to be fixed precisely by the expense occasioned by each recipient. To Professor Cossa as to Professor Roscher, the American idea of supporting the public schools by taxing merely the property-owners would probably appear "dangerously Socialistic."

Prof. Cossa does not in this volume deal specifically with the question of protection, though he lays down the principles necessary to its solution. When he urges that no person or corporation should be exempt from taxation; when he declares that there should be "a minimum of difference between the amount turned into the treasury and that obtained from the contributors"; when he shows how indirect taxes burden unjustly the incomes of the poor, he destroys the foundations of the protective system. In one respect, however, he is not in sympathy with most free-traders. The fact that indirect taxation may be made to yield immense revenues without the people being aroused to consider the extent, or the justice, or the necessity of their burdens, is not even mentioned as an argument against the system. In an American writer, Prof. Cossa's leaning towards indirect taxation would indicate a student of political extravagance, and not a student of political economy. His view, however, is fully explained by the extreme fiscal necessities of the Italian Government.

Regarding the problems of local taxation, perhaps the most interesting view maintained by Prof. Cossa is that in levying the tax upon dwellings the smallest house-rents should be exempt from taxation, and in general the rates should increase with the rental value. In America the taxes upon dwellings fall indirectly upon the renters, and for this reason their justice or injustice has never been considered. The brunt of our local taxation falls upon the property-owners; yet in a city like New York, where 96 per cent. of the people are renters, we cannot doubt that that part of the local taxation which does not fall upon the land is in a large degree borne by these renters, the poorest obtaining no exemption and the richest paying no increased rate. Prof. Cossa's view on this question is by no means new, since the French Constitutional Assembly incorporated in its legislation an extreme form of the same idea, and, in the avowed attempt to tax all incomes equally, assumed that rents below 100 francs indicated incomes only twice that sum, while rents above 12,000 francs indicated incomes twelve times that figure. Of course, Prof. Cossa would favor no such progression as this, since he is anything but radical in his political ideas, and rejects the principle of progressive taxation, except that he would exempt an *existence minimum*. The consideration for the incomes of the working classes, which he shows in considering the tax on dwellings, is more than neutralized by his defence of the *octroi* or municipal customs duties. We regret to notice that Prof. Cossa believes that, on the whole, the *octroi* duties are being increased, though some cities have abolished them. This indicates the continued backwardness of Italy's political development. Absurd as our national tariff may be, Americans have always had municipal free trade.

The American notes to the volume constitute nearly a fourth of it, and contain brief discussions of our American problems, such as the taxation of mortgages, of personal property, of corporations, etc. The method of treatment is historical and statistical rather than mathematical. In addition to these notes there is an appendix to the volume containing a bibliography of the science of finance.

Volcanoes and Earthquakes: A Popular Account of their Nature, Causes, Effects, and Geographical Distribution, from Personal Observation in the Hawaiian and Philippine Islands, Japan, Iceland, the Mediterranean Basin, Spain, and the United States. By Samuel Kneeland, A.M., M.D. Boston: D. Lothrop Co. 1888. 8vo, pp. 220, 16 plates.

In this book Dr. Kneeland has given a series of interesting sketches of his personal adventures and more or less scientific observations on several of the most important volcanic districts of the world, some of which have rarely been visited by intelligent observers. The volume is intended for the use of the popular reader rather than the man of science; indeed, from the point of view of geology it is without importance, except from occasional observations of certain phenomena connected with volcanic ejections. The most interesting parts of the work are those which record the author's personal observation in the Philippine Islands, where he had an opportunity of seeing the district of the Laguna which lies to the southeast of Manila. Such, for instance, is his account

of the eruption of the volcano of Mayon. The chapters on earthquakes give a tolerable account of the well-known phenomena exhibited in a number of the more important modern disturbances.

There is nothing in the book of any particular scientific value, but it may well serve the purposes of the reader who wishes a brief story of the principal facts connected with such disturbances. The illustrations of the book are numerous, and some of them which are reproduced from photographs are good. Those of a diagrammatic nature are generally poor. They are particularly faulty in that they very much exaggerate the slope of volcanic cones.

The book is handsomely printed, and has a sufficient index.

In Nesting Time. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. 1888. Pp. viii, 276.

MRS. MILLER is already pleasantly known to the lovers of "bird-life" as the author of a book with that title, and this volume continues a series of observations in a style which John Burroughs has rendered somewhat distinctive. It is the reverse of formal or technical ornithology, and all the more agreeable to most persons on that account. The sketches in the little collection are the record of careful observation, and scrupulously true in every particular. Few, if any, of the observations are "new," but they have that interest which attaches to all genuine studies from life. Many of our common birds, those which are too common for the professional ornithologist to notice particularly, are brought into the pages as real live feathered individuals, "honestly 'brothers of ours,'" whose personal peculiarities stand out in strong relief under the author's sympathetic pen. Some of her epithets are very happy, as "flutterbudget" for the brown thrush, and "a bird of affairs" for the blue jay. Any one could look at the same things if he would but look out of the window, or make a pet of one of our native birds; but there are many of us who do not see what we look at till some one like Mrs. Miller points it out, and many of the most charming bits of bird-life would escape us without some such reminder as we are here given.

BOOKS OF THE WEEK.

Baring-Gould, S. Eve: A Novel. D. Appleton & Co. 50 cents.
Besant—Rice. Ready-Money Mortiboy. Dodd, Mead & Co. $1.50.
Besant—Rice. The Chaplain of the Fleet. Dodd, Mead & Co. $1.50.
Besant—Rice. The Seamy Side. Dodd, Mead & Co. $1.50.
Bishop, W. H. The Brown Stone Boy, and Other Queer People. Cassell & Co.
"Books that Have Helped Me." From the *Forum*. D. Appleton & Co. 30 cents.
Bourinot, J. G. Manual of the Constitutional History of Canada. Montreal: Dawson Bros.
Bridgeman, G. T. O. The History of the Church and Manor of Wigan, in the County of Lancaster. Part I. Manchester, Eng.: The Chetham Society.
Cook, Prof. A. S. Judith: an Old Epic Fragment. Boston: D. C. Heath & Co.
Corbett, J. For God and Gold. Macmillan & Co. 50 cents.
Dewey, Prof. J. Leibnitz's New Essays Concerning the Human Understanding. Chicago: S. C. Griggs & Co. $1.25.
Dickinson, Mrs. Ellen E. The King's Daughters. Philadelphia: Hubbard Brothers. 25 cents.
Ellis, E. S. The Star of India. Frank A. Munsey. 50 cents.
Ford, S. Art: A Commodity. New York: 204 Fifth Avenue. $1.
Fothergill, Jessie. The Lasses of Leverhouse. Henry Holt & Co. $1.
Friis, Prof. J. A. Lajla: A Tale of Finmark. G. P. Putnam's Sons. $1.
Grabfield—Burns. Chemical Problems. Boston: D. C. Heath & Co.
Harrison, F. Oliver Cromwell. Macmillan & Co. 60 cents.
Hill, President D. G. The Social Influence of Christianity, with Special Reference to Contemporary Problems. (The Newton Lectures for 1887.) Boston: Silver, Burdett & Co. $1.25.
Litchfield, Grace D. A Hard-Won Victory. G. P. Putnam's Sons. $1.
Meredith, G. Rhoda Fleming: A Story. Boston: Roberts Bros. $1.
Müller, F. M. Three Introductory Lectures on the Science of Thought. Chicago: The Open Court Publishing Co. 75 cents.
Murray, D. C. Old Blazer's Hero. Chicago: Rand, McNally & Co.
Oswald, F. L. The Bible of Nature; or, the Principles of Secularism. The Truth-Seeker Co. $1.
Pellew, G. In Castle and Cabin; or, Talks in Ireland in 1887. G. P. Putnam's Sons. $1.50.
Reeves, Marian C. L. A Little Maid of Acadie. D. Appleton & Co. 25 cents.
Remains, Historical and Literary, Connected with the Palatine Counties of Lancaster and Chester. Vols. XIII. and XIV. Manchester, Eng.: The Chetham Society.
Robertson, Margaret M. By a Way She Knew Not: The Story of Allison Bain. A. D. F. Randolph & Co. $1.50.
Savage, Rev. M. J. Religious Reconstruction. Boston: Geo. H. Ellis.
Savage, M. J., and Others. "Show Us the Father." Chicago: Charles H. Kerr & Co. $1.
Shaw, A. The National Revenues: A Collection of Papers by American Economists. Chicago: A. C. McClurg & Co.

WANTED—A PORTRAIT OF ROBert Morris, after Gilbert Stuart. Address Lock Box 1630, Philadelphia, Pa.

The Nation.

NEW YORK, THURSDAY, JUNE 28, 1888.

The Week.

PRESIDENT CLEVELAND'S speech in acceptance of the Democratic nomination was necessarily brief. When a President accepts renomination, there is no need of his explaining or propounding a policy. People judge of the way in which he will discharge the duties of the office during the second term by the way in which he has discharged them during the first. He knows well that nothing he can say will add to or take away from the materials for a popular judgment furnished by his official record. What Mr. Cleveland had to do on Tuesday, therefore, was simply to show, both in matter and manner, that he felt the responsibility of the situation in which his renomination has placed him. This he unquestionably did. His answer to the Committee was grave nnd dignified, as the occasion required that it should be, and he made it weighty by one or two references to his official experience. He said, with a touch of pathos, and doubtless as a plea in extenuation of his shortcomings:

"I knew then that abuses and extravagances had crept into the management of public affairs; but I did not know their numerous forms nor the tenacity of their grasp. I knew then something of the bitterness of partisan obstruction; but I did not know how bitter, how reckless, and how shameless it could be."

And then, rising into real solemnity, both of thought and expression, he added:

"I shall not dwell upon the acts and the policy of the Administration now drawing to its close. Its record is open to every citizen of the land. And yet I will not be denied the privilege of asserting at this time that in the exercise of the functions of the high trust confided to me, I have yielded obedience only to the Constitution and the solemn obligation of my oath of office. I have done those things which, in the light of the understanding God has given me, seemed most conducive to the welfare of my countrymen and the promotion of good government. I would not if I could, for myself or for you, avoid a single consequence of a fair interpretation of my course.'

Was there ever in the history of American or any other politics a more thorough picture of a charlatan than Mr. Blaine has presented during the session of the Chicago Convention? While ostensibly upon a coaching trip in Scotland, totally indifferent to the work of a convention before which he had refused positively to be a candidate, he has been in reality standing at the end of an Atlantic cable, learning through constant communications with his managers at the Convention just what was happening there during every hour. Instead of holding aloof in dignified indifference, awaiting a unanimous call to take the leadership of his party, in case it came, he has shown the utmost eagerness to hurry it along, and hourly anxiety lest after all it should fail to come. One moment he "authorizes" denials that he holds any cable communication with his friends in Chicago, and the next moment he requests a friendly correspondent in London to send a message which shows he is fully informed as to what is going on at the Convention. When asked if he would accept a nomination, he declines to answer, and a few minutes later he allows his host, after consultation with him, to give out a statement that he would accept. When this announcement is seen to have been damaging, since it disclosed his plot too soon, his host is put forward to deny that the statement was made. When the correspondent who sent it confronts the host with that statement in his own handwriting, the host reluctantly confesses that he did give it out. Lying and humbug have surrounded him and his coaching party like a fog for a week, making him and his kind of politics a laughing stock upon two continents.

There were two significant indications on Thursday that Mr. Blaine was keeping as close an eye upon the Chicago Convention as he was upon the scenery of Scotland. He had an opportunity to read in the London newspapers of the previous morning sufficiently full accounts of the Convention's proceedings to learn of Mr. Thurston's allusion to his renomination as a "political crime" and the approval of that remark by the delegates. He was able to learn, also, that the effect of the speech had been to greatly lessen the chances of his renomination, and that the balloting in the Convention was to begin the next day. In view of these facts it was, to say the least, a little queer that for the first time since the Convention assembled he should be heard from as to its work and his opinions about it. He evidently put himself at once in connection with the London correspondent of the *Tribune*, for the following despatch appeared in that paper:

LONDON, June 20.—Mr. Blaine *asks me to say* that all rumors in the United States pretending to give letters or despatches from him or any of his party touching political topics of any kind, may be promptly discredited unless signed by Mr. Blaine himself. He has sent nothing whatever on the Presidential question except his Florence and Paris letters, and has had no correspondence of any kind with any gentleman named in connection with the Republican nomination. Mr. Blaine is now on the borders of Scotland pursuing his coaching tour.

This was headed by the *Tribune* with the line "Refusing to Lend Aid to Booms," which meant that Mr. Blaine did not favor or oppose any particular candidate.

The second indication appeared in a cable despatch from Bellingham, England, where Mr. Blaine and Mr. Carnegie's party passed Wednesday night, which was printed on Thursday in the *Sun* of this city and the *Press* of Philadelphia. In the despatch occurs this passage:

"Mr. Blaine does not speak of political matters in any way, but Mr. Carnegie, who is, of course, well able to express the feelings of his guest, said:

"'If Mr. Blaine is nominated, he will not refuse.' Then Mr. Carnegie wrote the following for publication:

"'If the Republican party finds it cannot agree upon a leader, and then calls upon its former leader to lead it again, it goes without saying that it would be his duty to do so (and Mr. Blaine has never failed to do his duty), more especially since it is now clear that the campaign is to be fought upon the issue of protection versus free trade, the former of which Mr. Blaine feels to be essential to his country's prosperity. It is not anticipated that this call will be made upon him; but if made, it must be accepted.'"

This was much more to the point than the *Tribune* communication, but, taken together, the two utterances completely sustained the course of the Blaine-or-nothing boomers.

Col. Ingersoll's speech for Gresham before the Convention on Friday evening would not have angered the Blaine men so much as it did but for the fact that he was in 1876 the favorite Blaine orator. It was in the convention of that year that he put Blaine in nomination in a speech which gave Blaine the permanent title of the Plumed Knight, and which made Ingersoll the idol of the Blaineites for several years. Now Ingersoll has changed sides, and, like everybody else who has done so, it is extremely difficult for him to praise any other candidate without casting reflections upon Blaine. Every word which he said in praise of Gresham as an honest man, of high character and unblemished reputation, was inevitably taken as an imputation upon Blaine. Thus, when he said that "no single man, whatever his services may be, is of the slightest importance compared with the success of the Republican party," it was naturally inferred by the Blaine men that he did not believe defeat with Blaine to be preferable to success with any other candidate. His whole speech was as antagonistic to Blaine's candidacy as was its closing declaration, that, "wishing and hoping for success," he was in favor of Gresham. That is why the Blaine boomers filled the air of the Chicago hotels with complaints of Ingersoll's "bad taste."

Of all "wise and well-directed efforts for the promotion of temperance and morality," the one which of late years has most commended itself to the support of the American people is the policy of restricting the sale of liquor by making it expensive. In his "Paris Message" of last December Mr. Blaine pointed out that "the tax on whiskey by the Federal Government, with its suppression of all illicit distillation, and consequent enhancement of price, has been a powerful agent in the temperance reform by putting it beyond the reach of so many"; and he ascribed to this policy largely the fact that "the amount of whiskey consumed in the United States per capita to-day is not more than 40 per cent. of that consumed thirty years ago." Everybody of common sense knows that, as Mr. Blaine said, "to cheapen the price of whiskey is to increase its consumption enormously," and, consequently, that "there would be no sense in urging the reform wrought by high license in many States if the National Government neutralizes the good effect by making whis-

key within reach of every one at twenty cents a gallon." Indeed, the whole philosophy of the matter was summed up in the declaration of Mr. Blaine that the removal of the whiskey tax "would destroy high license at once in all the States." The free-whiskey plank of the Republican platform commits the party to this deadly assault upon the high-license system, and we do not think that the Chicago *Tribune* exaggerates when it predicts that this "frightful blunder," which the Convention deliberately refused to correct, "will cost the Republican party tens and possibly hundreds of thousands of votes."

The amendment of the Republican platform, which was made at the last moment, is only comparable to the performance of a drunkard who should shout between drinks that he really at heart favored temperance. The anti-saloon people pleaded so hard for some recognition that Mr. Boutelle was persuaded to offer a milk-and water declaration on the subject of temperance, which, after considerable opposition, was adopted. But the earnest appeal of the Chicago *Tribune*, repeated with the utmost urgency, that the free-whiskey plank should be taken out of the platform, was not heeded, and the party therefore goes before the country upon two planks which are diametrically opposed to each other, as follows:

The first concern of good government is the virtue and sobriety of the people and the purity of the home. The Republican party cordially sympathizes with all wise and well-directed efforts for the promotion of temperance and morality.	If there should still remain a larger revenue than is requisite for the wants of the Government, *we favor the entire repeal of internal taxes* [whiskey and tobacco] rather than the surrender of any part of our protective system at the joint behest of the whiskey trusts and the agents of foreign manufacturers.

The declaration of the Republican platform regarding education must be a bitter pill to Senator Hawley and the Republicans who have stood with him in opposition to the Blair bill. It is not an out-and-out endorsement of that measure, but it is an admission that the principle upon which it was framed is good Republican doctrine, and that Congress may properly interfere in the matter of education in the States. A year ago Senator Hawley expressed the opinion that "one of the future missions of the Republican party, if it is to be true to the Constitution and to its own history, is to securely preserve the rights of the States" by opposing such schemes as the Blair bill. The party refuses to accept this mission, and it follows that it is no longer "true to the Constitution and to its own history." The only way of insuring the defeat of schemes of centralization is to reëlect a President who can be trusted to veto the Blair bill and all other measures showing the same "tendency towards a consolidation of the entire powers of government," which, as Senator Hawley truthfully declared in his Detroit speech last year, "is one of the strongest to-day, and one of those most dangerous to the republican experiment, as our fathers understood it."

The high-tariff plank of the platform is received with equal amazement and indignation among the farmers in the Northwest. All through that region the agricultural population has come to understand the injustice of the present system, and their demand for reform has been repeatedly illustrated by such action as that of the Minnesota Farmers' Alliance, an organization comprising members of both political parties, which last March adopted resolutions endorsing President Cleveland's views on the tariff issue, denouncing the protective tariff, and calling for its immediate repeal on all raw materials and the necessaries of life. When the Republican party denounces President Cleveland's views as "free trade," and proposes to make the tariff still higher, its managers show a remarkable blindness to the temper of the voters in the West. The Omaha *Bee*, one of the most prominent Republican papers in Nebraska, and an earnest supporter of the policy of tariff reform advocated by the Republican platform of 1884, condemns severely the tariff plank in the platform of 1888, and says that "a great many Republicans, particularly in the West, will regret the extreme position taken on this subject, and many such may be forced by their confirmed views respecting the necessity of a fair and wise revision of the tariff to withhold their support from the party." The *Bee* says that it had been hoped by tariff-reform Republicans that the Convention would show some advance in this matter, that it would give some heed to the large and growing sentiment in the party in favor of reducing the war tariff and giving the people the relief they require from this form of taxation, and concludes as follows: "The failure to do this will be a great and serious disappointment to these Republicans, who are more numerous than the extreme advocates of the protective system doubtless suppose. How many of them will be alienated from the party by reason of its extreme position on the tariff is a most important question, which may only be determined by the result in November."

It will be a great relief to national politics to get rid of Gov. Foraker as a conspicuous figure. As soon as he thought there was danger of McKinley's nomination, Foraker hastened to show that the suspicions which had been general in regard to his loyalty to Sherman were true, by coming out openly for Blaine and endeavoring to take half the Ohio delegation with him. Of course, McKinley's nomination would have put an end to Foraker's ambition to be candidate for Vice-President on a ticket with Blaine, and he accordingly broke his pledge to Sherman, and began to work for Blaine to defeat McKinley. The net result was such a storm of indignation in Ohio that he was forced to take the back track and promise to keep his pledge to Sherman. He can never more acquire fame by getting himself snubbed by people of consequence, because snubbing will henceforth be the treatment which the popular voice will say belongs to him.

"Some fellow like Phelps of New Jersey." We fear that the favorite son of New Jersey has been dubbed by the favorite son of Kansas for all coming time, and we are moved to protest against the derogation from the former's dignity implied by the slighting epithet used by the latter. It would seem that when something occurs to remind the presiding officer of the United States Senate of the existence of the New Jersey statesman, he thinks of him as a frisky, light-minded, well-meaning, and perhaps windy person, to whom serious people naturally apply the word "fellow." This word has several different meanings. When we speak of a "good fellow," for example, we mean a man of agreeable social qualities, a good companion, a true friend, one brimming with the milk of human kindness. The phrase always has a complimentary significance. It is not inconsistent with the possession of statesmanship and solid qualities, but implies that these merits are crowned and ornamented with the finer sensibilities of the heart. A "nice fellow" is understood to be one against whom nothing can be said, a man of obliging disposition and graceful exterior, but without striking or showy qualities. Another grade of fellow is the English variety, known as "not half a bad fellow." This means that the first impression made by him is that of a good fellow, but that further acquaintance may modify the opinion, and that it is best to hold one's judgment in suspense for the present, but with a favorable leaning. When we speak of a "fellow" pure and simple, there are also shades of meaning which can only be interpreted by the context. We may mean that he is a good-for-nothing, that he is a social encumbrance, a person with whom we do not care to associate; or we may mean merely that he is a person to whom we have no kind of objection, but who is not to be taken seriously. Looking at Mr. Ingalls's use of the phrase as applied to the Hon. William Walter Phelps, we cannot resist the thought that it was in the latter sense that he employed it. Hence our protest. We protest against any implication, whether from Ingalls or anybody else, that the favorite son of New Jersey is not to be taken seriously, except as he may be of service in raising money from manufacturers and Wall Street.

It is the unanimous opinion of the newspapers that Harrison's nomination aroused little enthusiasm in this city. The labor politicians, so far as heard from, expressed dislike of Harrison because of his record in the Senate against the restriction of Chinese immigration. The Irish Republicans were divided in opinion, the majority of them knowing little of Harrison, and evidently waiting to see what provision would be made towards paying the rent of their "headquarters" in case they were inclined to support him. Most of the Republican Boys had not returned from Chicago, but the few of them who had remained here appeared to

take a gloomy view of the future and of the outlook for the protection of their kind of American industry.

The President sent in another batch of vetoes of private pension bills on Friday. One of the bills proposed to grant a pension to Charles Glamann, who left the service in 1865 without having made any claim of disability, but in 1880 alleged that he had been struck with a brick by a comrade with whom he had got into a row, and injured in his left arm! Mr. Cleveland concludes his message in this case with the remark: "I believe that if the veterans of the war knew all that was going on in the way of granting pensions by private bills, they would be more disgusted than any other class of our citizens." Only blindness on the part of the Republican managers could put them in the attitude of condemning the President for vetoing pension bills, and pledging themselves to give a pension to every man who got hit with a brick in a quarrel.

The statement of Secretary Fairchild in reference to the investigation of the civil service in the Custom-house discloses a total misapprehension of the attitude of the Civil-Service-Reform Association in this matter. He goes upon the assumption that the Association has made charges against him, and states that the Association, through its officers and attorney, appeared before the Senate Committee as the medium by which certain charges affecting him and his administration of the Treasury Department were presented, and explains that his statement is published "because the sponsors for the charges against me are of such high standing and reputation, and because the charges themselves are such as to weaken the faith of those who believe them in the faithful administration of this Government." As a matter of fact, the Association has made no accusation against Mr. Fairchild, and the charges which he seeks to refute can only have been inferred by him from the character of the testimony elicited by the Senate Committee, or from publications for which the Association is not responsible. An examination of the testimony would also have shown the Secretary that he was mistaken in supposing that the sugar division possessed any peculiar or extraordinary interest for the Association, other than that which the Association had in any division or department where it is believed the Civil-Service Law has been violated. The testimony shows that the Surveyor's Department, the Weigher's Department, and the offensive partisanship of Deputy Collector Davis and others in the matter of the Binghamton Post-office, received no less attention from the Investigating Committee than the Appraiser's Department. Of the fifty witnesses who were examined, but thirteen were questioned as to the Appraiser's Department, and of the 288 printed pages of testimony, only 92 relate to that Department.

The *Iron Age* prints an article some columns in length from a correspondent who pleads for a lower duty on steel wire rods, the raw material of wire fencing, which is so largely manufactured in this country. We can faintly imagine the distress of Judge Kelley, and Mr. Thomas B. Reed, and Major McKinley, and in fact all of the Republican members of Congress except three or four, when they read this appeal in a newspaper which is perhaps the best exponent of protectionist sentiment in the country as regards the iron and steel industries. It is true that the *Iron Age* does not editorially endorse the argument of its correspondent, but it gives him a hearing, and thus virtually lends its sanction to the heresy that a man *may* favor lower duties on some things without putting all American industry in jeopardy, lowering wages of workingmen, and pauperizing everybody between the two oceans. The argument of the writer in the *Iron Age* shows that the manufacturers of fence wire are taxed 6-10 of a cent per pound, about 70 per cent. ad valorem, on their raw material, in the name of protection to American labor, "in behalf of rod mills less than half-a-dozen in number and *employing in the aggregate about one hundred men*," and that these half-dozen concerns are now demanding an increased duty —in behalf of labor, of course. "It seems a fair proposition," he continues, "that the duty shall be such as to give rod mills which have chosen eligible locations, where fuel is cheap and freight to distributing centres low, a liberal return on their investment after allowing for contingencies and the payment of their present rates for labor. This protection they should have, and they are entitled to no more. It can hardly be contended that the duty shall be put so high that a profit can be made on plants erected without regard to economy of production or facilities for distribution. To do this would be to put a premium on incapacity, and protect the fool against the consequences of his folly." This is the embodiment of common sense.

The Court of Appeals has made a decision in regard to the legality of boycotting which completely sustains the position of Judge Barrett and of the General Term, and affirms their decision, that strikes for any other purpose than for securing an increase of wages or preventing a reduction of wages, are illegal, if the effect of the strike is to injure the trade of the employer. Persons who direct such injurious strikes are guilty of conspiracy. The case upon which this important decision is based was that of Ober M. Hartt of this city against an Executive Committee of Knights of Labor. The employees of Gardner & Estes went on a strike to compel the firm to discharge Hartt, an obnoxious "scab" foreman. The strikers were successful, and Hartt was discharged. After being discharged, Hartt brought suit against the Executive Committee who had directed the strike, on the charge of conspiracy to prevent him from exercising his lawful trade or calling. The defendants set up the law of 1870, which forbids the construction of laws defining conspiracy in such a way as to restrict the peaceable assembling or coöperation of persons employed in any trade or handicraft, for the purpose of securing an advance in the rate of wages or for the maintenance of any such rate. The decision is squarely against the defendants, and is so comprehensive that boycotting in this State is going to be very risky business hereafter.

In addition to the new Ballot Law, the Massachusetts Legislature passed an act regulating the management of caucuses. It is not a mandatory act, apparently, for it applies only to such caucuses as desire to be governed by its provisions, and so state in their calls. Ten or more persons, qualified to vote, in a caucus called in accordance with the provisions of the act, are sufficient to make it obligatory for all voting in the caucus to be upon the last published voting list, with such written additions as may be certified by the registrars of voters. The act provides a penalty of $50 or three months' imprisonment for voting or attempting to vote without right; and wrongful voting is defined as that of a person who is not a legal voter or is not "included in the terms of the call under which the meeting is held." The object of this is to prevent caucuses from being packed by voters who have no right to be there. Nobody in the State appears to have much faith that the act will be of practical value. The opinion appears to be gaining ground in all our large cities that reform of the primaries is an impossibility, and that the only effective remedy is their abolition, nominations being made directly by committees, as they are made indirectly now. The only check which the voters can exercise is at the polls by voting against all bad nominations, without regard to their party name.

By the death of Mr. Sydney Howard Gay the country loses another of the old-time abolitionists of the ante-war period, and another of the old school of journalists contemporary with Greeley, Raymond, and Bryant. Mr. Gay was a man of retiring nature, but of the purest life and of stubborn loyalty to his convictions. He had held successively the position of managing editor of the New York *Tribune*, the Chicago *Tribune*, and the New York *Evening Post*, and that of the chief editor of the *National Anti-Slavery Standard*, contributing to each of these journals, during his connection with them, a literary flavor of the best character, and a moral tone which was inseparable from his own standards. His most considerable work was Bryant's 'History of the United States,' so called, published by the house of Scribner. This was almost wholly the production of Mr. Gay, and is now a standard work. A later production of his is the life of James Madison in the American Statesmen series. Mr. Gay had been in ill-health for three years, and in the last year of his life had been entirely helpless, suffering greatly, but awaiting with infinite patience the summons of the last messenger that comes to man.

THE REPUBLICAN NATIONAL PLATFORM.

We remarked upon the platform adopted by the St. Louis Convention that it was not chargeable with ambiguity in its method of dealing with the tariff question, since it endorsed the President's message and the Mills bill without variableness or shadow of turning. The Chicago platform is entitled to like commendation, for it goes further in its sanction of what its framers call protection and what we hold to be tariff robbery than any other platform ever adopted since the Government was founded—further, we think, than any party in any government ever went before. The Republicans in Congress have been hesitating all these months since the President's message was delivered, doubting whether they should attack the surplus by lowering the sugar duties or by repealing the internal tax on intoxicating liquors. Hitherto nobody but Judge Kelley has avowed himself in favor of the latter policy. The Convention has resolved all these doubts by demanding the repeal of the whiskey tax rather than that of any protective duty great or small.

It almost takes one's breath away to read such a platform. It is so at variance with all former deliverances of the party, with scores of resolutions of State Legislatures under Republican control, with hundreds of speeches and votes of Republican statesmen now living, with the report of the Republican Tariff Commission only five years ago, and with the recommendations of successive Republican Presidents and Secretaries of the Treasury, that the party can be likened only to the man who made a monster of which he became the unhappy victim. Protection is the Frankenstein of the Republican party. It has taken possession of and will destroy its maker as utterly as any party was ever destroyed in all history. We have the utmost confidence that this insensate platform will array the intelligence, the common sense of the country on the opposite side. It is an appeal to stupidity, ignorance, and prejudice. Consequently, it was stronger the first hour of its promulgation than it will ever be again. All institutions of learning will work against it, consciously or unconsciously, day by day. Even the manufacturers whose interests it is intended to support, cannot unite in favor of a platform which proposes to petrify the existing tariff, and allow no reductions and no changes except in the way of an increase of duties. By so petrifying the tariff without regard to its character or its effect upon particular industries, particular classes or sections, but taking the whole thing as a "Thus saith the Lord," the Chicago Convention has passed the bâton of Progress over to the Democratic party, and has made itself the representative of inertia as well as of excessive and unjust taxation.

We confess that the platform goes much further than we had supposed it was possible for any party to go. It has been a common saying that when it became necessary to reform the tariff, the Republicans would do the work if they should then be in power. But this platform binds them *not to do it* even when they are in power; and logically they cannot, because the vote that carries them into power will be a vote in support of a platform which declares the present tariff to be exactly right, or not susceptible of amendment except in the way of increase. Now, if this sort of doctrine is to be defended through a long campaign, and in other campaigns to come, there will be many a seat in Congress, now securely occupied by members who have held out the hope of some moderate amendment by and by, that will be lost, in spite of all the money the protected classes can raise for political ends. And yet we would not have the platform different if we could. We like a "square fight," and there can be none unless the issues are sharply drawn. Free whiskey versus taxed necessaries of life is a plain issue, one that everybody can understand, and the one that Mr. Cleveland invited in his last annual message. His supporters can ask nothing better.

Nothing matches the high-tariff and free-whiskey plank in the platform better than the demand for large appropriations to carry off the Treasury surplus. For the first time in the history of parties extravagance is declared to be a good thing. For the first time economy in the public service is deprecated, and by the plainest inference denounced as inapplicable to national administration. More pensions, more river and harbor bills, national aid to State education, fortification bills, navy bills, and everything else that will take money out of the Treasury, are either openly demanded or plainly hinted at as part of a desirable national policy. Need we say that all this points the way to the very saturnalia of corruption in public life? Does it not add startling force to all that has been said about the dangers of a surplus revenue? Does it not give new point to the saying of James Russell Lowell that a public surplus is "a Pandora's box of infectious demoralization"? It is astonishing beyond measure that a great party, embracing at a former time by far the larger share of public intelligence and virtue, should declare itself in favor of schemes whose purpose is to squander the public revenue in order to make opportunity for high and unnecessary taxes. We do not believe that such a policy will ever be ratified by the American people.

"The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver," further says the platform. This is about as unmeaning as anything in the literature of finance, but it conveys, nevertheless, a compliment to President Cleveland's Administration. The use of gold and silver as money is tolerably well established in this country, and nobody is now seeking to discontinue it. As silver has not been "monetized" in this country, and cannot be until free coinage of that metal is established by law, neither Mr. Cleveland nor anybody is likely to demonetize it. But Mr. Cleveland has shown sufficiently and repeatedly that he is opposed to free coinage, and also that he is opposed to the coinage of any more Bland dollars than there is a public demand for. It will be considered by all intelligent men of business in the East, and by scholars and financiers everywhere, a fine compliment to Mr. Cleveland that the Chicago Convention has drawn attention to his position in this important matter, although the platform does not state the position of the Republican party on the silver question, except by inference. So far as inference goes, the implication is that the Republican party differs from Mr. Cleveland as to silver coinage. If any strong impression to this effect were made by the platform, it would add a great many votes to the Democratic ticket in New York and New England this year. On the other hand, it is easy to see that this plank is not the kind of deliverance that the silver-producing States and Territories wanted.

The plank relating to the fisheries is not only a menace to the peace of nations, but, argumentatively considered, is in conflict with the recent speech of Senator Frye on the same subject. The platform affirms that the pending treaty is "a pusillanimous surrender of the essential privileges to which our fishing vessels are entitled under the Treaty of 1818, and the reciprocal maritime legislation of 1830, and the comity of nations." Mr. Frye said that the Treaty of 1818 was itself a pusillanimous surrender of those privileges. It is not denied by anybody, except these platform-makers, that the pending treaty gives us more privileges than the Treaty of 1818 did. The platform to this extent asserts a downright falsehood. And why? Can the reason be anything else than a desire to catch the votes of the Irish dynamite faction? Probably the party would not declare war against Great Britain. The vote in the Senate the other day in favor of arbitration of international disputes would seem conclusive that war is not intended by keeping open the fisheries question. But the platform means that the war spirit shall be fanned, that disturbers of peace shall be encouraged, and that the country shall take the chances of peace or war during an exciting political campaign. This, we say, is a crime against civilization. If the country gets through the next five months without a breach of international peace, the good fortune will be due to the prudence of President Cleveland, and the good temper which the pending treaty itself has cultivated between the peoples of the two countries.

THE REPUBLICAN CANDIDATES.

The ticket nominated at Chicago after such prolonged agony is not of a kind to excite much enthusiasm, but is, nevertheless, a very respectable one, and for this we return thanks without reserve or stint to the Republican Convention and the Republican party. It is an ideal condition in politics when the public have reasonable assurance that, whichever party is successful, the dignity of the nation will receive no harm from the character of the occupant of the Presidential office. When it is remembered how much has been escaped, how narrowly one great party has avoided a candidacy which would have again

made the personal issue the absorbing one of the campaign, the feeling of thankfulness is deepened. Mr. Harrison is a fair representative of his party—not the best one, not so good as Gresham would have been, not so commanding a figure as Sherman, but infinitely better than Blaine. He has not the personal qualities that attract the multitude, nor has he accumulated the renown which belongs to an extended public career; but, on the other hand, he has made none of the antagonisms which are usually inseparable from a long period of public service, and since his "record" is comparatively brief, his opponents will find few points of attack and his supporters will have little to defend. In brief, Mr. Harrison is not stronger than his party, but he is not weaker than his party. His nomination leaves the field open for the freest discussion of the principles which divide the American people. Mr. Cleveland is stronger than his party, but not so much stronger that the issues are likely to be obscured. It will be the merit of the coming campaign that it will be fought more distinctly on principles than any other since the first election of Gen. Grant, which determined the reconstruction of the Southern States.

The most important speech made by Mr. Harrison during his Senatorial term was that in which he attacked President Cleveland's civil-service record. This was a strong speech, regarded merely as an attack, but it gave no promise of betterment in case the Republican party should succeed in overthrowing the present Administration. All its implications and intendments were of the opposite character. The principles of "a clean sweep" were, if not fully avowed, at least clearly implied, and certainly Mr. Harrison is the man who might be most confidently expected to carry out this principle to the letter, for he was reputed to have the most insatiable appetite for offices that ever haunted the departments at Washington. So rapacious was his quest for places for relatives and friends that Mr. Blaine, when Secretary of State, is reported to have said that "Harrison had asked for thirteen more first-class missions than there were on the diplomatic list." So far as civil-service reform is concerned in the campaign, we should expect, in the event of Mr. Harrison's election, to see the practices of Andrew Jackson's first term repeated with something bordering on fury.

But the civil-service question, important as it is, will not be the decisive one of the campaign. The real question is the tariff and the surplus. It may be assumed that the American people are in favor of sufficient protection to counterbalance the higher wages paid in manufacturing employments here as compared with like industries abroad, but not sufficient to create monopolies, trusts, and "combines." The impression has been cultivated, as the Oregon election has shown, that the Mills bill, which still leaves 40 per cent. average duties on manufactures, as against 47 1-10 per cent. now prevailing, is a free-trade measure, and that the whole tariff is coming down by the run. This is so gross a perversion of facts that it cannot last through a campaign. The Republicans have done much in their platform to dissipate the illusion and to prove that protection is not upheld for the sake of wages, but for the sake of protection. Their doctrine, stated broadly and without disguise, is, that if there were no Government expenses at all, it would still be desirable to tax imports by as much as 47 1-10 per cent. average and without much regard to the kind of property imported. There could not be a fairer issue, or one offering better opportunity for national education. We think that Mr. Cleveland and the Democratic party will gain votes continuously as the campaign proceeds and the truth is made clear to the people that taxes, however laid, are burdens on industry, and that the country cannot get rich by increasing and multiplying such burdens.

Of Mr. Morton we have only to say that while he is an eminently respectable man, who would fill the place in which it is proposed to put him with dignity and tact, it is probably not to his fitness, so much as to his wealth, that he owed his selection. The Republican "workers" in this city are more in need of funds than they have been at any time since their organization; but we trust Mr. Morton has had sufficient experience of them and their ways to see that his contributions to campaign expenses are sent to the Chairman of the National Committee only.

A PARTY OF SPECIAL INTERESTS.

"GOVERNMENT of the people, by the people, for the people," was the ideal which Abraham Lincoln, in his Gettysburg address, presented as the highest aim of our institutions. The party which had elected Lincoln to the Presidency was an organization which might well profess such an aim, for it was in its origin a party of the people, by the people, for the people. Its great object, its sole excuse for existence, indeed, was the restriction of slavery, which was in itself a crime against the people. It was the conviction of what Lincoln called "the plain people" that slavery was a wrong to them as well as to its victims, which brought the Republican party into being and carried it into power.

In his 'Twenty Years of Congress,' Mr. Blaine clearly points out this distinguishing characteristic of the Republican party in the days of its youth. In speaking of its National Convention in 1856, he says: "The Democracy saw at once that a new and dangerous opponent was in the field—an opponent that stood upon principle and shunned expediency, that brought to its standard a great host of young men, and that won to its service a very large proportion of the talent, the courage, and the eloquence of the North." Of the Chicago Convention of 1860 the same writer well says: "It was a representative meeting of the active and able men of both the old parties in the North, who had come together on the one overshadowing issue of the hour. Differing widely on many other questions, inheriting their creeds from antagonistic organizations of the past, they thought alike on the one subject of putting a stop to the extension of slavery. In the entire history of party conventions, not one can be found so characteristic, so earnest, so determined to do the wisest thing, so little governed by personal considerations, so entirely devoted to one absorbing idea."

It would be hard to imagine a greater contrast than that between this picture of the Convention of 1860 and the spectacle presented at Chicago last week. The personnel, the officers, the tone of the gathering were those of another party. The delegates were, more largely than usual, men unknown beyond their own districts or States, and who had no claim to be better known. Flanagan himself was there—the immortal Flanagan, whose inquiry in the Convention of 1880 has become historic, "What are we here for except for the offices?"—and with him a host of Flanagans, whose only idea of politics was to get a share of the spoils, which is all that a party victory ever means to them. Another numerous class was composed of the men whose only request of the party is, that it shall adopt a policy which shall put money into their pockets — the protected classes, who, as President Foster of the Republican League has frankly confessed, are the persons "who are most benefited by our tariff laws," and as a United States Senator, quoted by Mr. Foster, says, are "getting practically the sole benefit, or at least the most directly important benefits, of the tariff laws." A third class consisted of the men who represent great corporations which seek unfair advantages from the Government. Take out these three classes—the professional politicians who are after the offices, the representatives of the protected classes, and the representatives of the corporations, all of whom are "governed by personal considerations"—and but little of the Convention would have been left.

The Convention was called to order by a manufacturer whose firm is one of the seven members of the combination which, by the help of a high tariff, fixes the price of steel and iron beams. Its temporary Chairman was a man whose only prominence has come from the unsavory reputation he has acquired as counsel of a Pacific railroad. Among the candidates for the Presidential nomination was a millionaire who had gained the wealth which alone made him a candidate, by the unjust tariff upon lumber.

Incidents illuminate the character of an assembly. Two may be cited which reveal the low tone of the Chicago gathering. The character of the delegates from the Pacific Coast, who were the loudest Blaine howlers, was thus described: "The Pacific Slopers are a noisy lot. They are furnished with ammunition enough to keep up a howling racket for a month. A space 10x20 in their headquarters is the magazine. In it are scores of cases of Burgundy and gin and brandy stacked up to the ceiling. It's as free and untrammelled as the humidity of the Queen City. It's rum in thirteen different ways, and more rum if wanted." For a companion picture, take the night

scene in the room of the Committee on Credentials on Tuesday, when Mahoneites and anti-Mahoneites, each a crowd of selfish and unprincipled politicians, got into a row which could only be quieted by the help of the police. As a man is known by the company he keeps, so a party is known by the delegates who are chosen to its national convention. The boisterous crowd from the Pacific Coast, the quarrelling bullies from Virginia, are not the sort of men who attended Republican conventions in 1856 and 1860.

In 1856 and 1860 the Republican party was an organization of unselfish men, who appealed to the intelligence of the nation. In 1888 it has sunk to be a party of special interests, based upon the selfishness of men who want to make money or get offices out of it, and it goes before the country upon a platform which "insults the intelligence of the people"—to quote Mr. Depew's characterization of Mr. Blaine's "rebel-debt" speeches in 1872—by yelling "free trade," when the Democrats propose to carry out the very policy of lowering taxes and reducing the surplus which the Republicans themselves advocated in their better days.

THE COPYRIGHT BILL AND "PROTECTION."

THE question of international copyright has nothing to do with free trade or tariff protection. So far as this country is concerned, it is simply a question whether we will be an honest or a dishonest nation. And as regards legislation, the question is, Shall we enact a law to surround the literary property of the foreigner with such legal safeguards as will prevent the appropriation of it by any one without the consent of its owner? It is, in truth, merely a question whether the national conscience is so far aroused that it will ask Congress to blot out from our statute-book the legislative enactment which says that the legal protection which has been accorded to the productions of our own authors, shall not apply to works brought into this country by authors who are not citizens of the United States—an infringement of the principle of the equality of aliens and natives before the law which does not disgrace the literary-property legislation of any other nation, but which (to the unenviable notoriety of our country) has existed in our copyright statutes for nearly a hundred years. There is, therefore, aside from the desire for a clear conscience upon the part of the people at large, but a single interest concerned in international copyright legislation, namely, that of the foreign author. And as the thing desired is simply the extension to the foreign author of the *property* protection now accorded by our copyright statutes to the native author, the simplest enactment which will remove the limitation of such protection to citizens of the United States is entirely sufficient. The fourth section of the Copyright Bill drawn up in January, 1885, by the American (Authors') Copyright League, may be quoted as the ideal international copyright act under present circumstances:

> Be it enacted, etc., That section 4971 of the Revised Statutes of the United States is hereby repealed; section 4954 is amended by striking out the words "and a citizen of the United States or resident therein," and section 4967 is amended by striking out the words "if such author or proprietor is a citizen of the United States or resident therein."

This brief enactment is amply sufficient to extend every privilege conferred upon native authors by our present copyright laws to foreign authors, and to place all authors, the world over, upon exactly the same footing as regards the security vouchsafed their literary productions within the limits of the United States. Moreover, it will enable our authors to obtain in all the important countries of Europe a reciprocal protection for their productions, for a more liberal spirit has pervaded the copyright legislation of foreign States than has prevailed in our own laws. France and Belgium grant copyright security entirely without respect to nationality, while Great Britain, Germany, Italy, Switzerland, and Hungary extend protection to all works first, or simultaneously, published within their borders; and the laws of each of these countries (except the one last named), as well as those of Spain, Portugal, Austria, Sweden, Denmark, and Norway, contain reciprocity clauses which guarantee protection to the works of the authors of such other countries as have enacted reciprocal protection to the works of their authors.

But an examination of the copyright bill which was passed by the Senate on May 9 discloses the curious fact that while its first section includes all three of the provisions of the brief act quoted above, they are almost lost to sight among a number of stipulations which, when not simply repetitions of provisions already contained in the present copyright law, have nothing to do with the simple granting of an honest security in this country to the foreign author's property. The question may well be asked, therefore, For what purpose, or for whose benefit, are these carefully framed stipulations made a part of the copyright bill? And possibly the answer will disclose the reasons why this bill has been called a "protection" measure. The report from the Committee on Patents which accompanied the bill, contained the following paragraph concerning its provisions. The italics are ours:

> "It is believed that in its present shape *all interests* are carefully guarded, and the Committee are gratified to report to the Senate that at the public hearing held in regard to this subject *every interest* was well represented, and an extraordinary degree of harmony prevailed in regard to it."

But an examination of the appended stenographic report of the hearing referred to shows that while American authors, American publishers, American printers and typesetters, and American booksellers were on hand to urge the advantages *they* were to derive from the passage of this bill, the foreign authors—in whose behalf the international-copyright agitation is supposed to have been created—had not a single representative present; and in the fifty pages of the printed report of this hearing there is not to be discovered anything beyond cursory reference to the fact that the American public demand of Congress international-copyright legislation upon the sole ground of *justice to foreign authors!* In short, this document gives evidence that the primary object of the measure was lost sight of in a strenuous endeavor to convince the Committee that, in framing this bill, "all interests," as the report cautiously puts it, were "carefully guarded."

In their previous report, however, the same Committee were not so guarded in their language, and plainly stated therein that the provisions of the bill were designed to "carefully *protect* the American publishers and the American artisans who make the books in this country," which protection would only insure to the latter, according to the report, that which they "now possess, the labor put upon the publication of foreign books." In other words, the argument is that a certain amount of work now accrues to American publishers through the reprinting of English books which, under an unrestricted bill like that set out above, would be lost to them, because English authors would arrange with their publishers in England for editions of their books to supply the American demand, owing (so says the report) to the existence of "a peculiar and insular anti-American prejudice in the minds of many English authors." In view of the admission made in the same paragraph of the additional cost of manufacture in this country, this would seem to be only ordinary good sense upon the part of English authors; but doubtless the result predicted would follow, and, "in that case," the Committee argue, "our tariff would become inoperative as a protection to the American publisher and the American workman." That is to say, the cost of manufacture is so much less in England that the present tariff tax of 25 per cent. upon that cost would not be large enough to induce English authors to have their books made in this country. The Committee were, therefore, constrained to devise some method to counteract the practical results of the first section of their bill; and as an increase of the duty upon books was not a tenable proposition, the short cut was adopted of *compelling* the English author to give his books to American publishers for manufacture, as a return for the privilege of copyright conferred; and that this should be no half-way measure in the latter's behalf, it is forbidden any one in this country to use copies not made by an American publisher, unless he shall have obtained first the gracious permission of the latter (who becomes the "copyright proprietor" of the bill) to import the foreign edition. Moreover, as certain native authors had had the temerity to have their own works printed abroad (in face of the plain intimation implied in the imposition of a duty of 25 per cent. upon imported books that there was a moral obligation upon their part to support American book manufacturers), the convenient opportunity was seized to make entire manufacture in the United States *compulsory* upon the part of American authors also, with the alternative of no copyright security for their books in their own country.

Certainly, in the face of these stipulations, the naïve assertion contained in the report that "the duties might be entirely removed

from books or other copyrighted articles without in any sense affecting the operations of this bill, or they might be doubled or quadrupled and still be without such effect," may be acquiesced in; but it must by this time be plain to our readers that certain provisions of this bill, which are repeatedly admitted in the first report of the Committee to have been formulated for the express "protection" of American publishers and printers, secure to them a monopoly far beyond anything it is possible to obtain by means of legitimate tariff legislation.

COSMOPOLITAN MADRID.

SEVILLE, May 31.

SPAIN ought to be the favorite resort of those Anglomaniacs who turn up the ends of their trousers in New York or Boston when it rains in London. In Spain they would be *inevitably* taken for Englishmen even if they did not ape the latest London fads; for the Spaniard makes no distinction between Englishmen and North Americans, but labels them indiscriminately as "Ingleses." "American" here means South American, and if you tell the natives you are an American, they are apt to express surprise that you do not speak Spanish as fluently as they do. This misunderstanding seems to extend even to South Americans who visit the "old country," and who not infrequently apply to the "American" Ministry in Madrid for assistance or advice. In view of the close relations between Spain and South America, all this seems natural enough; but it is not flattering to one's national vanity to be thus summarily sponged out of existence. What is particularly aggravating is to find a number of American inventions utilized in Spain and invariably placed to the credit of the "Ingleses." I was annoyed to find that street cars are supposed to be an English invention; but my indignation rose to fever heat when I entered a place marked "English Drinks" and found—a genuine American soda-water fountain, an article positively unknown in England!

The word "Ingleses" meets the eye at every corner in modern Madrid. There are for sale English hats, English cravats, English biscuits, English candles and matches, etc. One also comes across German goods occasionally—a lithographic establishment, or a Wagner opera in the window of a music store by the side of "Carmen"; but the English predominates, even over the French, which has always hitherto made its influence felt in Madrid. In fact, the Spanish capital has never been a thoroughly Spanish city. Though known to history almost a thousand years, it remained a mere village until Charles V. made it his occasional residence, and Philip II., in 1560, his capital; and even then it did not grow with special rapidity, for of its 500,000 inhabitants, 300,000 have been added within the last thirty years—consequently a large part of the city has an essentially modern aspect, resembling other European cities. This is especially true of the heart of the city, the square known as the Puerta del Sol, where ten streets and all the tramway lines meet, and whence they diverge in different directions, like so many arteries. By taking each of these tramway lines in succession one can get in a few hours a general impression of the city, at a most insignificant expense, for the fare is only two cents. The cars are moved by mules who are always urged to run, even up hill; but in steep places an extra mule is attached. These tramways pass through some streets that are tortuous and narrow enough to remind one of southern Spain, but as a rule the streets are wider than in the southern cities, and the houses higher, since there are no earthquakes to guard against in this part of Spain. The streets are very badly and roughly paved, and therefore exceedingly noisy, but otherwise they are kept in excellent condition, free from dust and filth; the inhabitants having learned a lesson or two in hygiene since the days of Charles III., whose efforts to clean the streets were opposed on *sanitary* grounds!

An inestimable boon to the city from this point of view is its abundant supply of water, with which the streets are sprinkled with hose at intervals sufficiently frequent to lay the dust. This water is brought to the city from the Guadarrama Mountains, a distance of thirty-two miles, by means of an aqueduct which cost nearly $25,000,000. The introduction of this water deprived Madrid of one of its most picturesque features, the water-carriers; but it gave it instead not only cool and clean streets, but gardens and parks and good drinking water. Three hundred years ago, we read, Madrid lay in the midst of dense forests, in which kings hunted boars and bears. Subsequently these trees were cut down, so that to-day the same regions are bleak and barren as a desert. But since the building of the new water-works, green oases of groves have sprung up again, and these, it is said, are already beginning to modify the climate, so that it is probable that if the present policy is continued, irrigation may restore to Madrid its former pleasant climate, instead of its present one, which is described as consisting of nine months' winter and three months' hell. Shade is the one thing Madrid needs, and if this were supplied, its trying and sudden changes of temperature would not be so great. The neighborhood of a range of mountains which even in summer are crowned with snow, renders the winter exceedingly cold, all the more since Madrid itself lies at an elevation of almost 2,500 feet above the sea. But from an æsthetic point of view these mountains constitute one of the greatest charms of the Spanish capital. In walking along the superheated streets of Madrid, nothing could be more delightful than the occasional glimpses one gets of these snowy summits, which make the tourist fancy himself in Innsbruck or Interlaken, instead of in sunny Spain. Altogether, I think the surroundings of Madrid have been too much depreciated by tourists and guide-book makers. From the neighborhood of the chapel of San Isidoro, across the river, one overlooks a wide expanse of dreary but sublime plains, interrupted by hills, with the chapel which marks the exact centre of the Iberian Peninsula on one side, and the Snow Mountains on another. I know of few more picturesque situations for a capital; and the rapid increase in the population of Madrid, together with the healthy appearance of the inhabitants, indicates that the climate is not quite as bad as its reputation.

Returning to the Puerta del Sol, and subjecting it to a closer scrutiny, one cannot but wonder at first why it should be such a famous place. It is an ordinary square, such as may be found in almost any city of a hundred thousand inhabitants, and is not even the finest square in Madrid. Its importance lies in the fact that, as already intimated, it is the heart of the city and the centre of its traffic and amusements. The buildings which frame it in are the principal hotels in the city, and here, too, are situated several of the principal cafés, in which the gossips discuss and the politicians settle the affairs of the nation. These cafés are very large, but not so elegant as the Parisian and Viennese cafés, nor is the coffee as good. But the chocolate is excellent, and still better are the various sherbets and compounds of lemon, sugar, and water, in the brewing of which the Spaniards exercise as much ingenuity as the "Ingleses," *i. e.*, Americans, in their mixed drinks. There are no newspapers at the disposal of frequenters of the cafés, but they can buy the local sheets at the door, where there is generally a small news-stand. Most of these Spanish newspapers sell at one cent, and they contain very little of interest to foreigners.

The Madrid cafés give one a vivid sense of the fact that the Spaniards are the most democratic nation in the world. In Paris or Vienna one hardly ever sees a peasant or an ill-dressed city loafer enter a café; but in Madrid all classes meet in these places on equal terms, the peasant thinking he has as much claim to the title *caballero* as the politician or officer. In this democratic atmosphere it strikes one as all the more odd that the guests should call the attention of the waiters by clapping their hands—which may be a relic of Moorish days in Spain.

The hotels in Madrid and other Spanish cities are becoming modernized so rapidly that one has to go to the cheaper ones if he wishes to see what a Spanish *fonda* is like. In the larger hotels the *menu* is printed in French, and the cookery is French too. Certain dishes peculiar to the country continue, however, to give a local flavor to the meals, and the Spanish hours are always retained. For those rare and eccentric beings who get up before ten o'clock a *desayuno* is provided, consisting of chocolate or coffee, with bread and butter. It is a most unsatisfactory way to begin the day, because it leaves one hungry all the forenoon, even if one can swallow the bread and butter. Spanish bread is, perhaps, not unwholesome, but it is unappetizing and heavy, and the crust is almost as hard as a cracker. Of the butter a little goes a great way. The Spaniards need what little pasturage they have for their bulls, so that cows are scarce, and goats have to be depended on for the breakfast requisites. Goat-milk to me is an abomination, yet it is the only kind one can get here. It is quite unwholesome in summer to foreigners, and hardly less so to the natives, who have a not very charitable proverb to the effect that in March milk is good for yourself, in April for your brother, and in May for your mother-in-law. If the guide-books would condescend to mention this matter, many a tourist might be saved a few days of discomfort, such as I suffered from until an Englishman, who has long lived in the country, advised us to drink our coffee without milk, or take chocolate, and quoted the proverb just referred to.

Much more satisfactory are the other two meals which are served in this country—the *almuerzo* or breakfast, and the *comida* or dinner. The latter is generally served as a table d'hôte at a fixed hour, while the almuerzo must be a sore trial to cooks and waiters, since it lasts from ten to one o'clock. Every one drops in when he feels hungry, and orders, from a list of a dozen or twenty, three dishes, which are cooked to order in ample portions. The first course generally consists of eggs in some form or other, or some kind of sea-food, of which there is a great variety. Kidneys, beefsteak, and mutton cutlets are always on the list. For dessert there are cheese, oranges, cherries, strawberries (small but good), apricots, roasted almonds, etc. Strawberries are eaten with sugar and the juice of an orange squeezed over them, which I find better (*i. e.*, with a *Spanish* orange) than the French way of adding claret, or the American of adding cream. At the

table d'hôte one occasionally, but not often, gets opportunity to taste the famous national dish, the *puchero*, of which De Amicis happily says that "it is, in regard to the culinary art, what an anthology is to literature: it is a little of everything and the best." There are slices of beef, ham, smoked sausage, fowl, and other kinds of meat, and little piles of various kinds of vegetables heaped around the plate. The guest helps himself to one or all of these as he chooses. A decanter of red wine, Val de Peñas, is placed between every two plates, and if emptied is filled again, without charge. But it rarely is emptied unless two Frenchmen happen to get hold of the same bottle. Spaniards drink very little of their wine (although it is good and much purer than French wine), and tourists soon follow their example, whatever may be their habits at home. The climate of Spain is antagonistic to strong drink, and a temperance question does not exist here. Indeed, I do not think a Spaniard could be more astonished than by the question whether there was a temperance or total-abstinence movement in his country.

I believe that not a few persons who would like to see the art treasures of Spain are deterred from visiting the country by their belief in the old myth that fastidious strangers must starve here, because everything is fried in unpalatable oil and seasoned with garlic. This apprehension is to-day as groundless as the fear of meeting with highwaymen. Since the Government placed the country under the protection of the "civil guards," who are to be seen in couples at every station, etc., Spain is as safe as any country in the world to travel in; and since French—or rather Swiss—methods have been introduced in the hotels, garlic and bad oil have become memories of the past, and one fares as well in Spanish hotels, at least in the cities, as anywhere, while the charges are remarkably reasonable, rarely exceeding $2 to $3 a day, everything included—$2.50 being the average, at the best hotels. Nor are Spanish trains so slow or so inconvenient in their hours as they have been represented by tourists who know of no other way of spicing their letters than by exaggeration. The fast train from Paris to southern Spain necessarily traverses part of the way at night. But one sees the Pyrenees scenery, and subsequently, by selecting the proper trains, one can traverse the whole of Spain by daylight.

The only real ground for complaint which tourists have is that the natives stubbornly refuse to modify their climate and their habits to suit the convenience of strangers. It is embarrassing, on arriving in Madrid, to find that, roughly speaking, the inhabitants sleep in the daytime, and live and move about at night. Now, a tourist wants to see both the city and its inhabitants. But the city can only be seen comfortably from 8 to 10 A. M., before the sun becomes unbearable, and the inhabitants can only be seen from 7 P. M. to 2 A. M. The only way out of the dilemma is to "do as the Romans do": take a two-hour nap, or siesta, in the afternoon; then you can get along with six hours' sleep at night, and rise early to see the sights. The afternoon is of no use anyway, as the heat is too enervating to allow any mental or physical exertion. But the Spaniards, not content with their siesta, devote the golden morning hours also to sleep, and herein, I am convinced, lies the main cause of Spanish decadence. The five hours from 8 A. M. to 1 P. M. are worth more for solid work of any kind than all the other nineteen hours, and these precious hours the Spaniards waste, partly in sleep, partly by an untimely, heavy meal at eleven or twelve. No amount of night work can ever atone for the hours thus sacrificed. "Morgenstunde hat Gold im Munde."

Yet it cannot be denied that there is a peculiar fascination in Spanish night life; and a nation which lives more for pleasure than for business cannot be blamed for its customs in this respect. Sun-worship could never have originated in Spain. The most delightful thing in Spain is the wonderfully blue sky, the most detestable thing the sun that causes it. No Spaniard would ever have sold his shadow to the devil, like the German, Peter Schlemihl, for such a paltry thing as a purse of gold which never became empty; for, much as he likes gold, he likes shade more. An "ombra" seat in the bull ring costs twice as much as a seat in the sun, and in walking about during the day time along their tortuous streets, the natives constantly cross and recross them in order to utilize every yard of shade. No sooner has the sun set than the deserted streets become populous, and everybody hastens to the Prado, or public promenade, to enjoy the cool and fragrant breezes and greet his friends. All who can afford it—and many who ought to spend their scant income in a more sensible way—come out in their carriages. No other city in the world can turn out so many teams of Andalusian horses, as proud and as graceful as their masters and mistresses; but nowhere, on the other hand, would one see the ignoble mule team amid such a procession of aristocratic carriages. The mule may be a noble animal, but, by the side of the Andalusian horse, he looks very uncouth and utilitarian. Yet those who sit in in the carriage behind the two mules appear not a bit less vain than the occupants of a four-horse carriage, and doubtless consider themselves a degree higher in the social scale than those who walk along the Prado. On Sundays and holidays there is such a dense throng of pedestrians that one can move along but slowly—which is just what you want, since there is much to see. Reserving my remarks on Spanish women for a special letter, this much I may say here, that I saw more feminine beauty in one week in Madrid than I ever saw anywhere else in four weeks. And it is pleasant to notice that there seems to be a reaction in favor of the mantilla, at least in the middle classes, whose heads are not so often disfigured as ten years ago by the hideous Parisian hats.

The procession—and public reception—in the Prado is a bit of genuine Spanish local color in cosmopolitan Madrid. To see more local color one has only to go to Toledo Street and the older quarters of the city to find it in abundance. I was so fortunate as to be in Madrid on May 15, when the principal festival of the year is celebrated by the lower classes and the peasants who come from neighboring villages. It is the festival of San Isidoro, the patron saint of Madrid, a bishop of the seventh century, who is also by some considered the inventor of harmony in music. I had no idea where the festival was to be held, but simply went into the Puerta del Sol and followed the crowd, in the afternoon. Thus I got across the Manzanares, in the meadow along the bank of which, for a mile or so, a most interesting sight presented itself. The road was lined with men and women offering their "aqua fresca" from large jugs. The street-cars, 'busses, and miscellaneous vehicles (some with as many as six mules) emptied their crowded cargoes, and soon the meadow was like an ant-hill, except that ants are always in mourning and do not wear such bright colors as the peasant women and the soldiers in this crowd. There were innumerable booths for eating and drinking, carrousels, and other common features of folk festivals. More unique were the family groups scattered everywhere, eating their slices of cold meat, salad, red-pepper, and oranges. Many had their wine in the same old pig-skins of which one reads in 'Don Quixote.' Every hundred yards there was some sort of primitive music—often simply a drum—to the rhythm of which the young men and women danced with an expression of intense delight. Indeed, the whole crowd wore a look of indifference to the past and future, and determination to make the most of the passing moment. A greater number of happy faces I never saw together in my life, nor a more good-natured crowd. Further up the hill were long rows of booths with pottery, toys for children, cakes, etc.; and further up still was the Saint's Chapel, into which all crowded, to kiss a silver image held by a priest, to receive a printed picture of the saint, and to drop a copper.

HENRY T. FINCK.

MADAME DE GENLIS ON THE RIVIERA.

ALBENGA, June 6, 1888.

WHO and what were the ancient Ligurians? is a question much more easily asked than answered. Their language left a strong influence on the varied dialects of this coast; and if any one can tell us what that language was, it is probably Mr. James Bruyn Andrews, an American scholar, now resident at Mentone. About all we know of the inhabitants is that they were brave and warlike, with a desire for independence; that they lived chiefly on the produce of their herds, milk, and some drink made of barley. They sold their excellent and beautifully veined timber, as well as their cattle, hides, and honey, at Genoa for oil and wine, since the little wine which they produced tasted of pitch, used probably—as now in Greece and Portugal—to preserve either the wine or the skins in which it was kept. They bred an excellent race of mules, wove tunics, and, according to Strabo, collected amber on the seacoast. Their two great tribes, the Ingauni and the Intemelii, had their common boundary somewhere near Taggia or San Remo. The capital of one was Albium Ingaunum (Albenga), and of the other Albium Intemelium, now Ventimiglia. Strabo considers the word "Albium" as related to Alps; the changing of the *b* to *v* is very common in modern Italian dialects, and explains how the Greek *β* is now pronounced *v*, as probably it always was, and makes us wonder whether a similar pronunciation were not the rule in Latin.

So much did the Ligurians love their independence, and so much did they hate the conquering Romans, that they were willing to ally themselves with every enemy of Rome. Mago, the brother of Hannibal, made what is now the plain, and was then the port, of Albenga, the station for the Carthaginian fleet during the second Punic war. Mago, by the way, should be remembered pleasantly by us all, because, by having given his name to Port Mahon, he has been immortalized by Richelieu in Mayonnaise sauce. So obstinate were the Ligurians that, according to Pliny, the boundaries of their possessions had to be resettled thirty times; and every victory over them was reason for a triumph at Rome. It was probably this obstinacy, this refusal to remain subdued, which caused the Romans to apply to them epithets as bad as "Punica fides." Even Virgil could not resist the temptation to bring in Aunus,

> "Yet, like a true Ligurian born to cheat,
> At least while fortune favored his deceit."

And he makes Camilla exclaim,

"On others practise thy Ligurian arts;
Thin stratagems and tricks of little hearts
Are lost on me."

From this descends a whole series of proverbs, culminating in that Tuscan one of "Sea without fish; mountains without trees; men without faith, and women without shame"; and in the lines of Dante in his 'Inferno':

"Ah, Genoese! ye men at variance
With every virtue, full of every vice!"

In order to keep down the Ligurians as well as to civilize them, the Romans made several colonies along the coast; and among the early inscriptions found at Albenga, we may notice the names of several well-known noble families from Rome itself. We see traces, too, of their villas in ruined walls of *opus reticulatum* along the old road leading to Alassio; and further on over the hills to the great sacred forest of Neptune (the Lucus Bormanni), which covered the sites of what are now Andora, Cervo, and Diano. Albenga equally with Alba claims to be the birthplace of the virtuous Pertinax, though the genuineness of the inscription which would seem to prove it is doubted by many. But if there be no right to the real Emperor, there is no question with regard to the origin of the usurper Proculus, whose prowess, though not always in the combats of Mars, is undoubted. This family was the richest in Albenga, though wealth had been acquired by piracy; and Proculus was able to arm two thousand of his own slaves, and probably a great number of his sons. The fertile plain did not at that time exist, and the town was on the slope of the nearest western hill; the River Centa often changed its course, leaving broad stretches of swampy land. Gradually this was rendered more solid, until Constantius, the great general of Honorius, and afterwards the husband of Placidia, stopped here long enough, in 414, on his way from restoring order in Gaul, to put walls about the new town which had been built on the plain, and to construct—or at all events repair—the Pontelungo, that picturesque old Roman bridge which now stands on dry land. When the river changed its course again, cutting between the town and the hill, with great destruction of property and probably of life, we do not exactly know, but there is no mention of the Centa running in its present bed until somewhere in the eleventh century.

But neither the old bridge, nor its sanctuary at one end, nor the Baptistery—equally an old Roman work—nor the cathedral with the old lions behind it, and the Mosaic pavement which President De Brosses admired so much, will detain the visitor long. Albenga needs to be seen from a distance; and after looking at the lovely view from the new bridge, both landward and seaward, the tourist goes sufficiently far on the hillside to see in an amphitheatre of hills and mountains, some of which have snowy tops even to midsummer, the walls and towers of the city standing up in the midst of vineyards and well-cultivated vegetable gardens and meadows full of orchids. These towers of old noble houses add greatly to the picturesqueness as well as to the historical interest of Albenga. Certainly no town on the Riviera, and probably not one this side of San Gemignano, possesses so many.

In looking over the list of podestàs and other officials, one is struck with the number of good family names—such as Doria, Spinola, Scotti, Visconti, Fieschi—and one finds among the nobles of the first class of 200 years ago even such familiar names as Americo, Cepolla, and Tomato. In the middle of the fifteenth century there was a bishop named Napoleone Fieschi; and at the same time a podestà, Napoleone Lomellino, a fact which may interest students of the history of the Bonapartes. What are now wretched villages along the Riviera were in the Middle Ages flourishing and rich towns, so great was their commerce; and the diocese of Albenga, which extended almost from Savona to San Remo, had revenues sufficiently great to render its possession an object of ambition. We need not be astonished, then, to find that Cardinal Giulio de' Medici consented to accept the See, rich as he already was. The Cardinal, afterwards Pope Clement VII., who had four years before been made Archbishop of Florence, found no time to come to his diocese, and resigned it after a few months. There was also one other Bishop of Albenga, Sinibaldo Fieschi, who became Pope as Innocent IV. in 1243.

Otherwise the ecclesiastical history of Albenga has little interest. The curious island opposite, called still, as of old, Gallinaria—according to Varro and Columella, from its having once abounded in barn fowl in a wild state—and which had been sanctified by having served as a refuge for St. Martin of Tours, was the seat of a great Benedictine monastery. Subsequently the Benedictines founded abbeys on the hill above Albenga, the ruins of which are so prominent in the landscape, at the picturesque Cape of Santa Croce and at Alassio. Gradually they abandoned the island, which shows now hardly a trace of the monastery, confined themselves to their more accessible establishments, and led such riotous lives that with great difficulty, after several inquests, the Pope succeeded in suppressing their houses.

Far more interest attaches to the secular history of Albenga during the Middle Ages, when the town was in frequent conflict with the Counts della Laigueglia, who, through the favor of the Emperors Maximilian and Charles V., were the great lords of the country, from the village of Laigueglia beyond Alassio, whence they derive their name, to their stronghold of Garlenda, in the hills, the church of which is still visited by tourists curious to see an excellent picture by Domenichino, and a very bad one attributed to Nicolas Poussin. The neighboring village of Alassio, situated in a bay protected from most winds, with an excellent beach, which was considered by the inhabitants of Albenga as quite their own—having been built for their country residences—began to rival the mother city in trade and wealth as well as enterprise. One Alassian sea captain, Luca Ferrari, was a contemporary of Columbus in his discoveries in the Indies, and was granted great privileges by Ferdinand of Spain. Worst of all, the colony turned against its mother, and one fine morning the impatient Alassians, who desired their independence, nearly captured the town of Albenga by a sudden attack. Among those who fell in the fight was a Napoleone d'Aste. Albenga wisely gave way, and conferred on Alassio an independent civil and criminal jurisdiction. Spurred on by this success as well as by danger from the Turkish and Barbary pirates, the inhabitants of Alassio began to surround their town with walls, the expense of which was borne by the richer inhabitants, many of the women contributing their jewels. The first bastion was consecrated by the Bishop in 1521. Thanks to these, Albenga and Alassio were saved from the calamities which overwhelmed San Remo, Taggia, and other towns during the wars between Charles V. and Francis I., after the French had made an alliance with the Turks. After Laigueglia had been taken and pillaged by the pirates in 1546, a captain from Alassio, named Berno, sailed out, took a Turkish ship, rescued the captives and their goods, and took prisoners eighteen stalwart Mussulmans, who, one is glad to know, were set to work on the fortifications.

Albenga furnished hospitality at various times to the great Admiral Doria, to Charles V., to Emmanuel Philibert, and much later on was the headquarters for a while of the army of Napoleon, as well as a shelter for Pope Pius VII. But the great local celebrity is, of all persons in the world, Mme. de Genlis; and at the little neighboring village of Lusignano they will show you a house where she lived and wrote. This legend seems to me a pure product of local gratitude for a pretty description of Albenga, and some compliments on its situation, in her novel of 'Adèle et Théodore.' In a note she added that the description was not exaggerated, and was extracted from the diary which she wrote on the spot. More than that, she lays at Albenga the episode of the imprisonment in a cell for so many years of the Duchess of Cerifalco, which she had heard at Rome from the Duchess herself and her father, the Prince Palestrina. In the same story she makes the Duchess of Belmire leave Nice and reside for some years at Albenga, for the purpose of recovering her health. As two of the princely pupils of Mme. de Genlis amused themselves by taking the names Adèle and Théodore, this was apparently sufficient in connection with other things to make passages in the book appear like bits of autobiography.

The journey of Mme. de Genlis along the Riviera was in attendance on the Duchesse de Chartres, who had gone as far as Toulon with the Duke when, in his capacity of an officer of the navy, he was about to take a cruise in the Mediterranean. The ladies planned a journey into Italy without the previous permission of the court; for which excuses were made, when they were already on the road, by saying that the Duchess was suddenly taken with a desire of seeing her decrepit old grandfather, the Duke of Modena. From Antibes the party went by sea to Nice, escorted by a felucca carrying a whole regiment in order to protect them against the pirates. Apropos of Nice, Mme. de Genlis says that "the fashion of sending consumptive persons thither is strange and pernicious. The air is indeed very pure, but too sharp for delicate chests; the most frequent diseases there are affections of the lungs, and then the local doctors hasten to send their patients to the neighborhood of Lyons." Smollett says much the same. From Nice they travelled along what was then the frightful mule path of the Cornice, with an occasional bit of sea, to Genoa. Thence they went to Modena, Mantua, Rome, and Naples, of all of which journey Mme. de Genlis has left a very entertaining account in her memoirs. Before and for some time after the publication of 'Adèle et Théodore,' her duties as governess kept her at court, and after the Revolution the marches and countermarches of armies made any journey or stay in the Riviera impossible. As 'Adèle et Théodore' is not a book which is in everybody's hands, and in any case would not stay there long enough—such is its insipidity—for the proper page to be reached by the reader, I may perhaps be allowed to quote the description which has called out so much local gratitude:

"The road from Porto Maurizio to Albenga is full of frightful passes, but it has admirable points of view—especially that from the top of the hill above Laigueglia, the descent from which is very steep and dangerous. We came down on foot—I might even say barefoot, for the rocks that we had been walking over for three days had so worn our shoes that the soles were nearly gone; and as we had not expected to walk we had not taken the precaution of bringing several pairs. At ten o'clock in the morning we made our chairmen stop on a hill

from which we saw the town of Albenga in the midst of a delicious plain; this is a remarkable singularity on this coast, as all the other towns are on the rocky hillsides. At the foot of the hill is an immense fertile plain, surrounded by rocks and majestic mountains, some of which were covered with snow. The aridity of the rocks, the imposing aspect of the mountains, form a singular contrast to the smiling beauty of the plain; the meadows are covered with violets and lilies, the oleander grows wild; all the fields are surrounded by long arbors of vines through which you see verdure, flowers, and fruits enclosed by these light trellises, where every arch is ornamented by graceful grape wreaths that sway with the slightest breeze. In this delightful abode it seemed as if the earth were cultivated, not for the needs of man, but only for his pleasure. Everything one met was agreeable. We saw there real shepherdesses; all the young girls were bare-headed, with a few flowers stuck in their hair on the left side. They are nearly all pretty, and especially remarkable for the elegance of their figure."

Unquestionably Mme. de Genlis, in spite of her affected prudishness, must have had great personal attractions. Her pupil, Louis Philippe, told Victor Hugo (although all Hugo's statements must be taken with allowance) that when he was still a gawky youth he suddenly awoke to the fact that he was in love for the first time, and with his governess. Madame was at that time interested in some one else, and sent the future King out of the room, telling him not to make a fool of himself. "'Tis a pity" (Hugo goes on) "that when she had taught him so many useful and useless things, she would not explain the meaning of the verb Love." She was certainly right if the celebrated Pamela were her daughter and the sister of Louis Philippe. Mme. de Genlis tells a long story to show that her adopted daughter Pamela was really a little English girl of low parentage, introduced into the Palais Royal merely for the sake of giving the Orleans children a chance of practising their English. But Moore, in his 'Life of Lord Edward Fitgerald,' written from family papers, says positively that Pamela was the daughter of the Duke of Orleans (Égalité) and of Mme. de Genlis, and her descendants all seem to admit it and to be proud of it.

After Lord Edward Fitzgerald's death in the Irish insurrection of 1798, Pamela married Mr. Pitcairn, a Scotchman by birth, who generally resided in New York, and was for some time American Consul at Hamburg. Whether Pamela ever came to America it is hard to say at this distance, but there is a bit of family history which interests many other people than the author of 'A Girl's Life Eighty Years Ago.' Pitcairn once, at a theatre in New York, in jesting with a young lady, having asked what he should bring her on his next visit, she answered, "A Scotch husband." The man was brought and was married, and years later, when they were quietly living at Canandaigua, Louis Philippe and his two brothers arrived on horseback from Niagara with letters of introduction, and asked for hospitality. It was on a Sunday. The princes were in rags, and the larder of the family was so empty that it was necessary to send to the nearest neighbor's in order to borrow sufficient, not only to eat, but to wear.

E. S.

Correspondence.

THE PEOPLE'S PALACE.

To the Editor of The Nation:

Sir: I have just seen a paper in the *Nation* of April 26 on the "People's Palace." Will you allow me to point out a grave mistake made by the author? He says that the audience at the Sunday organ recitals, held at the Palace, is not an audience of genuine workmen. Permit me to say that the whole of the audience on Sunday morning, almost without exception, consists of genuine workmen. Your writer, "N. N.," judged by the dress, which he thought to be that of clerks and shopkeepers. The better class of workingmen, as a fact, dress in London as well as the clerks and shopkeepers. The men in corduroys, whom "N. N." found outside, are not the sort of men for whom the Palace is designed. They are the lower class, the men who hang about bars and drink all their wages. The respectable workman puts on his corduroys and ties a handkerchief round his neck on week days. On Sundays he goes in broadcloth and white collar.—I remain, sir, your most obedient servant,

Walter Besant.

Hampton, London, June 16, 1888.

MAINE POLITICS.

To the Editor of The Nation:

Sir: In your issue of this week are some statements regarding the Republican nominee, Hon. E. C. Burleigh, and Maine politics which should not pass unprotested. The writer of this has no sympathy with the Machine or machine politics. Mr. Burleigh was not the choice of the Ring, and was not brought forward by it. Of the sixteen members of the State Committee—one for each county—Mr. Burleigh had the support of only two. Gov. Marble is an accidental Governor, and but for this would never have been brought forward as a candidate. He is, moreover, seventy years old, and has always been an active politician and chronic office-holder. To suppose any ring could pack a convention of 1,448 delegates from more than five hundred cities, towns, and plantations, with three active candidates in the field, is absurd. The delegates from Mr. Burleigh's own city were elected without an opposing vote. Of the 1,638 votes cast in the Convention, Gov. Marble received 190, Mr. Cleaves 473, Mr. Burleigh 775. Mr. Burleigh's plurality over Mr. Cleaves 302, over Gov. Marble 585. In his own county, whose delegation numbered 131, Gov. Marble received 6 (one of them being a proxy delegate, who, after being overwhelmingly defeated in his own city, went as proxy for a plantation which cast only 3 Republican votes at the last gubernatorial election), Mr. Cleaves 18, and Mr. Burleigh 107.

I think I have given you figures enough to show that he is the people's candidate. The question of his eligibility was fully discussed before the Convention as well as at it, where Judge Symonds made a lengthy plea against it. As to the articles in the Waterville *Mail* and Portland *Press*, if you had known the writers, I am sure you would have attached little weight to them. For many years I have been a reader of your paper, which I deem the fairest of any I have ever read, and I think I know your idea of political machines; and I can and do most emphatically say Mr. Burleigh is not the candidate of the Machine.—Yours, H.

Augusta, Me., June 23, 1888.

A SUGGESTION.

To the Editor of The Nation:

Sir: Now that the issue of the taxation of raw materials and necessaries of life seems to be fairly well defined between the two great political parties, would it not be well to make the exact figures and percentages of the tax upon a few of such articles a matter of common knowledge with the people?

A brief tabulation of the tax on wool, blankets, clothing, sugar, salt, lumber, iron, lead, copper, etc., together with a statement of the amount of the surplus, kept in type and prominently displayed in the newspapers, and in posters at the corners and cross-roads throughout the country, would be a quiet and effective argument that would pay in the long run, even should it become necessary to curtail the expense of club uniforms, pyrotechnics, and brass bands.—Very respectfully yours,

George B. Upham.

Boston, June 23, 1888.

Notes.

The new volume of the "Chandos Classics" of Frederick Warne & Co. will be 'Selected Essays from the *Tatler*,' with an introductory essay and notes by Alex. Charles Ewald.

A 'Manual of Astronomy,' by Prof. C. A. Young of Princeton, is announced by Ginn & Co.

Lee & Shepard, Boston, have in press 'Mexico, Picturesque, Political, Progressive,' by Mrs. Mary Elizabeth Blake and Mrs. Margaret F. Sullivan; and 'Methods and Aids in Teaching Geography,' by Chas. F. King.

An addition to the literature of Chautauqua comes to us in the account of the Nebraska Summer Assembly at Crete, by Anna E. Hahn (Boston: Congregational Sunday School and Publishing Society). It is cast partly in the form of a story, the experiences of a family during their attendance; but it contains specimens of the lectures given, and notes of the various ordinary proceedings. The moral effects of the work, as a kind of sociable camp-meeting, are most brought out. One of the minor advantages in this case was that the daughter accidentally met with a long-lost lover, whom she had left in the East; but generally the story is a mere blind for good words for Chautauqua circles, Crete College, the *Youth's Companion*, and various eminent or obscure orators, among whom we notice Mr. Thurston of the Chicago Convention. From the extracts here given from his address on Grant, one sees that his "eloquence" is something of which he has a stock always on hand.

Another series of 'Books that have Helped Me' papers, from the *Forum*, has been brought out by D. Appleton & Co. The confessions are nearly all from prominent persons, and serve the usual purpose of letting the world know how the writers began life, with more or less of circumstance and local color.

We praised last year 'The Musical Year-Book of the United States' (Boston, 152 Tremont Street: G. H. Wilson), and the new issue for the musical season of 1887–88 is now before us. The excessive attention formerly given to Boston as compared with New York has been measurably overcome. But Mr. Wilson prefers not to compete with Mr. Krehbiel's 'Review of the New York Musical Season,' to which he refers his readers for further particulars. First performances are indicated in this record of programmes, and especially valuable is the index of titles, under the composers' names. Beethoven and Wagner vie with each other, each filling rather more than a page of the index.

The second part of vol. i of Mr. Henry F. Waters's 'Genealogical Gleanings in England' has been published in Boston by the New England Historic Genealogical Society. To the later 'Gleanings' are prefixed the introductory notes which accompanied them in the *Register*, where they originally appeared, and were commented on by us from time to time,

The John Harvard researches are of prime interest in this as in the previous issue, and the view of his mother's home and facsimile of his autograph adorn the volume. But the index of persons shows the extraordinarily wide scope of Mr. Waters's explorations, and should attract to his support a great many adherents. Every one, in short, inclined to speculate and inquire about his English connections must hereafter turn first of all to these 'Gleanings.' An index of places is added, and has a peculiar value on the English side as preserving the names of localities now either lost or forgotten.

In line with the foregoing is the *Index Library* edited by W. P. W. Phillimore, Queen's College, Oxford, of which the sixth part has come to hand (London: Charles J. Clark). This number unlocks Chancery proceedings in the time of Charles I., and Northamptonshire and Rutland wills of the period 1510–1652. Reference has thus far been made to more than 10,000 wills, and upwards of 3,600 names occur in the portion of the Signet indexes already printed, while more than 16,000 references have been already made to the Royalist Composition Papers. An entirely new index to Sussex wills is in active preparation, and will probably include a series of marriage licenses. In short, this enterprise has strong claims for support in this country as well as in England.

"Elocution and Oratory" is the subject of the second number of the *Bibliographer and Reference List* (Buffalo, N. Y.: Moulton, Wenborne & Co.).

In No. 45 of the Proceedings of the U. S. Naval Institute (Annapolis), occurs the second and concluding portion of Notes from the Journal of Lieut. T. A. M. Craven, U. S. S. *Dale*, Pacific Squadron, 1846-49. These throw some light on the history of that period of conquest and annexation, and on the state of the navy, and are readable also for their pictures of places now transformed by the Anglo-Saxon settlement of California.

The photogravure after Mr. Thornycroft's "Mower" is the leading pictorial feature of the June *Portfolio* (Macmillan). Mr. Walter Armstrong furnishes the accompanying text, which is devoid of fulsome praise, so far as this statuary is concerned, and, for the rest, gives a glance at the progress of the art of sculpture in England since Banks and Flaxman.

There has probably never been a period in the history of printing when more experiments in book-making were ventured upon than the present; and there is no country where these experiments are more abundant and, in the main, more successful than France. One of the latest is 'Le Rosier de Madame Husson,' by M. Guy de Maupassant (Paris: Quantin; New York: F. W. Christern). M. de Maupassant is a masterly writer of short stories; but this is not one of his best—though a tale of Normandy, wherein he is generally seen to most advantage. Yet the 'Rosier de Madame Husson' serves its purpose well enough as a peg for the illustrations of M. Habert-Dys, who has provided one for every page, about thirty in all—sometimes a "landscape with figures," sometimes a decoration more Japanese, always apt and ingenious and interesting. As in Mr. Vedder's 'Omar Khayyám,' the design fills the whole page except a space left blank for the text. The letter-press is soberly printed in black, while the border changes color with every page. A frontispiece, etched by M. Abot from a design by M. Jules Desprès, seems a little out of keeping with the richer and more varied drawings of M. Habert-Dys.

Two more volumes of the "Œuvres inédites" of Victor Hugo were published June 1 by Hetzel-Quantin under the title 'Toute la Lyre.' It is a collection of about 1,000 pages of unpublished poems left by Victor Hugo among his manuscripts, for publication by his literary executors. The poems are of all the periods of his poetic life, and are written in his customary manner; but, as might be expected, when it is considered that they were rejected by the author from his previous collections during his lifetime, they are generally not of a quality to add to his reputation.

Among the late publications of Hachette & Cie. is a volume with the attractive title, 'Points obscurs et nouveaux de la vie de Pierre Corneille: Étude historique et critique, avec pièces justificatives' (Boston: Schoenhof). The author, M. François Bouquet, published in 1880 'La Troupe de Molière et les deux Corneille à Rouen en 1658.'

Félix Alcan has just published 'Lavoisier (1743–1794) d'après sa correspondance, ses manuscrits, ses papiers de famille et d'autres documents inédits,' by Édouard Grimaux.

A book which may prove to be very interesting was announced by Charpentier for publication June 4. It is 'Le Journal de Stendhal: mémoires inédits,' published and annotated by MM. de Nion and Stryenski.

The third volume of the 'Mémoires du général Cluseret' has been issued by Jules Lévy. It has for its especial title 'La Fin de l'Empire' (Boston: Schoenhof).

In consequence of a law passed at the last session of the Sobranye appropriating 60,000 francs for literary and scientific works, the Bulgarian Government has drawn up regulations for the study of literature and history. It is proposed to give a reward to all persons who bring to light ancient manuscripts or literary documents of value, as well as those who send copies of popular songs, proverbs, riddles, etc., hitherto unpublished, or descriptions of usages and customs. These will be published in a collection edited by the Minister of Public Instruction. Assistance will also be granted to the publication of literary and scientific works in Bulgarian, and of works written in foreign languages if intimately relating to the history and literature of the country. Another regulation provides that all antique objects discovered in Bulgaria belong to the State. It is forbidden to make excavations and searches for antiquities without official permission, on pain of confiscation of all objects found. There is the same penalty for attempting to export antiquities without permission. If, however, antiquities are discovered accidentally, or after due permission obtained, their value is estimated; one-third is given to the finder, and one-third to the owner of the land on which they are found.

The 'Etymologicum Magnum Romaniæ,' or Dictionary of the historical and popular language of the Rumanians, published by the Rumanian Academy, and edited by Mr. B. Petriceicŭ-Hasdeu, has reached the first number of the second volume, ending with the word *Apuc*, and, unlike many dictionaries, seems to increase in value as it goes on. Some of the names of towns—as, for example, Antina—are illustrated with maps, views, and cuts of the archæological objects found there. The Academy has recently published its Proceedings for the year 1886-87, second series, vol. ix, which contains much interesting matter; an edition of the verse-translation of the Psalter—both in Slavic and Latin type—made by Dosotheus, Metropolitan of Maldavia, according to the original manuscripts, and the edition of 1673, which is invaluable for the study of early Rumanian forms; and the works of Miron Costin, a Rumanian historian and statesman who lived from 1633 to 1691. This last book is richly illustrated with the facsimiles of manuscripts and autographs, and is edited by V. A. Urechia, Professor and formerly Minister of Public Instruction.

Every one who has read in the English or German translation the tales and fairy-stories of Ion Slavici, one of the most eminent Rumanian writers, will regret to learn that by a decision of the Court of Hermanstadt (Nagy Szeben, as it is called in Magyar) he has been condemned to imprisonment for a year on account of a press offence committed in his newspaper, *La Tribuna*. He has been found guilty of a too violent attack on the Hungarian Government. Slavici was a native of the Rumanian portion of Transylvania, where he passed his early years. After settling in Independent Rumania, he devoted himself entirely to literature. His return to Transylvania a few years ago to edit a political journal was lamented by all his friends, literary and other, except those who desired him to be the corypheus of the Rumanian Irredentist movement in Hungary.

The Deerfield, Mass., Summer School of History and Romance will reopen on July 5, and close on July 31, sitting Tuesdays, Thursdays, and Saturdays. There will also be classes in Folk-lore and in American Literature, open to members only. The manager is Mr. L. J. B. Lincoln.

—The July *Atlantic* continues the admirable series of classical papers by a second article upon Cicero as he is most delightfully known to us in his Letters. The period covered is that subsequent to his exile, and the passages translated are rendered with an exquisite literary touch, though they make no pretension to exact scholarship. The personality of Cicero on his companionable side—and he is one of the most companionable of the ancients, as Montaigne's appreciation proves—vitalizes and irradiates this somewhat slight study of him, but it has not that charm of completeness in the impression which distinguished the previous paper upon Pliny. Another interesting article of an unusual kind is Mr. Downes's first instalment of a series upon the artists of Boston. He deals with the early colonial portrait painters, and with Copley, Trumbull, and Stuart, in a style at once appreciative and restrained. The most important paper, however, is a sketch of the conditions of factory life in the Blackstone Valley of Rhode Island by Lillie B. Chace Wyman. She examines the system that has grown up under the hereditary cotton-mills in that district with regard principally to the feature of tenement-ownership, and to the arbitrary and practically autocratic control of the superintendents over their employees. It is an older but less developed type of the town of Pullman that appears in her pages, and its workings are not found to be entirely beneficent. The sanitary condition is said to be bad, and the tendency to develop a floating in place of a settled population to be marked. The control of the liquor traffic, on the other hand, is reckoned a gain. On the whole, however, no compensation is found in this form of "the industrial group" for the lack of the sentiment of home that springs from proprietorship, and the absence of the invigorating conditions of independence which belong to the American ideal of a small community. Furthermore, the opportunity of the superintendents to act capriciously, harshly, and inconsiderately is represented as very great. The only check seems to be the necessity of business gains; but this is a slender reed for justice to rest upon. Mrs. Wyman closes her article with an opinion of Senator Chace's: "Pecuniarily the factory is a

success, but in my judgment the sanitary and moral influences are bad." The number contains no poetry.

—Green's 'Short History of the English People' seems to belie its name when expanded into two octavo volumes and styled 'Histoire du Peuple Anglais' (Paris: E. Plon, Nourrit & Cie.). The translation has been made by M. Auguste Monod upon the text of 1882, but with the benefit (at least for corrections of errors) of the revision lately published by the historian's widow in a single compact volume. It is a not slavish translation, and occasionally retrenchment has been employed in the case of repetitions or contradictions. The maps have not been reproduced, on the ground of their insufficiency—a just censure, but it would have been natural to provide better, especially in view of a foreign audience. The table of contents has been bettered, the index has been reduced to one of proper names; yet here again there was a good opportunity to improve on the original. A welcome addition is an introduction, of about twenty pages, from the pen of M. Gabriel Monod. Its sketch of the author's career is infused with the warmth of personal acquaintance and admiration. M. Monod pays a high tribute to Green's impartiality, but offers some criticism, whose weight will be generally acknowledged, on behalf of Continental countries as against the overpraise of England's world-wide influence; and he concludes with a careful parallel between the course of monarchy and political freedom in England and in France, with its instructive antitheses. M. Monod hopes that the emancipation of his own country from centralization will yet be witnessed, and that the traditional feud between France and England will die out, while he regrets the evidences of repugnance on the latter's part to a closer understanding. The translation of Green must be of service in promoting the desired international harmony, and is indeed a patriotic performance. The publishers have made a handsome work of it.

—The Historical Manuscripts Commission is doing admirable work in bringing to light many precious documents relating not merely to English, but likewise to American history. Besides the reports on the papers of the Marquis of Landsdowne relating to colonial affairs during the years 1766–1783 (Fifth Report, 1876), those of the Duke of Manchester relating to the colonization of Virginia (Eighth Report, 1881), and those of the Marquess Townshend concerning the history of Carolina, Georgia, Massachusetts, and other parts of America, in the first half of the eighteenth century (Eleventh Report, App. iv., 1887), we now have a report on the manuscripts of the Earl of Dartmouth, which are very valuable for the study of American colonial history during the eventful years 1765–1779 (Eleventh Report, App. v., 1888, pp. 331-423). The second Earl of Dartmouth was Secretary for the Colonial Department from August, 1772, until November, 1775. His chief correspondents, abstracts of whose letters are given in this report, were, at first, Gov. Hutchinson of Boston, and Joseph Reed, the latter writing from Philadelphia. When the war for independence began, Gens. Gage and Howe, Admiral Graves, Govs. Carleton and Wentworth, Franklin, John Wesley, Lord North, and others are among the writers. We can here give only a few of the many instructive comments on the state of public affairs which these letters contain. Gov. Tryon, writing to the Earl of Dartmouth from New York, May 5, 1773, says: "His Majesty's instruction and his Majesty's interests are not at all times one and the same thing, and he who in America follows implicitly the letter of the instructions will not best serve the King" (p. 336). Joseph Reed to the Earl of Dartmouth, September 25, 1774: "No King ever had more loyal subjects, or any country more affectionate Colonists, than the Americans were. I, who am but a young man, well remember the former to be always spoken of with a respect approaching admiration, . . . [but] unless some plan of accommodation can be speedily formed, the affection of the Colonies will be irrecoverably lost. . . . What seemed a little time since a spark which, with prudence and wisdom, might have been extinguished, is now a flame that threatens ruin to both parent and child" (p. 362). The same correspondent writes, February 14, 1775: "Notwithstanding all which has passed, much remains of that old affection to the parent State which distinguished our happier days, [so] that a contest with her is regarded as the greatest possible evil, next to the loss of what we esteem our rights. . . . There is scarcely a man in this country, my Lord, in or out of office, not of immediate appointment from England, who does not oppose taxation by the British Parliament" (p. 373).

—One of the most interesting letters of the whole collection is that sent by John Wesley "In the way to Dublin," June 14, 1775, to the Earl of Dartmouth, protesting against the American war:

"All my prejudices," he says, "are against the Americans, for I am a High Churchman, the son of a High Churchman, bred up from my childhood in the highest notions of passive obedience and non resistance; and yet, in spite of all my rooted prejudice, I cannot avoid thinking (if I think at all) that an oppressed people asked for nothing more than their legal rights, and that in the most modest and inoffensive manner which the nature of the thing would allow. But waiving this, waiving all considerations of right and wrong, I ask, is it common sense to use force towards the Americans? . . . They are divided among themselves? So you are informed by various letters and memorials. So I doubt not was poor Rehoboam informed concerning the ten tribes. So (nearer our times) was Philip informed concerning the people of the Netherlands! No, my lord, they are terribly united; not in the Province of New England only, but down as low as the Jerseys and Pennsylvania, the bulk of the people are so united that to speak a word in favor of the present English measures would almost endanger a man's life."

He then discusses the dangers of an attack from abroad on Ireland while English resources are engaged in America:

"But we have our militia, our valiant, disciplined militia; these will effectually oppose them. Give me leave, my lord, to relate a little circumstance of which one then on the spot informed me. In 1716 a large body of militia were marching towards Preston against the rebels. In a wood which they were marching by a boy happened to discharge his fowling-piece. The soldiers gave [up] all for lost, and by common consent threw down their arms and ran for life. So much dependence is to be placed on our valorous militia!"

Mr. Wesley then draws a parallel between the time at which he is writing and the years 1640-1650—the dearness of provisions, the depression of trade, and the hatred of the poor for the rich all being similar. He concludes thus:

"Upon the whole I am really sometimes afraid that this 'evil is of the Lord.' When I consider (to say nothing of ten thousand other vices shocking to human nature) the astonishing luxury of the rich and the *profaneness* of rich and poor, I doubt whether general dissoluteness of manners does not demand a general visitation. Perhaps the decree has already gone forth from the Governor of the world. . . . But we Englishmen are too wise to acknowledge that God has anything to do in the world! Otherwise should we not seek him by fasting and prayer before He lets the lifted thunder drop? O, my lord, if your lordship can do anything, let it not be wanting! For God's sake, for the sake of the King, of the nation, of your lovely family, remember Rehoboam! Remember Philip the Second! Remember King Charles the First! I am, with true regard, my lord, your lordship's obedient servant, John Wesley" (p. 379).

—The Hungarian Academy of Sciences held its annual public meeting at Budapest on May 6, at which it elected as active member Mr. Benjamin Kállay, the Austro-Hungarian Finance Minister, and the author of a history of Servia; as honorary members, Mr. Tisza, the Hungarian Premier, and Count Julius Andrássy, and the Archduke Joseph—the two first simply for honors, the Archduke not only for his gypsy grammar, but for his botanical works; as foreign members, Mr. E. T. Atkinson, President of the Asiatic Society of Bengal, and MM. Ilminsky and Radloff, distinguished Russian Oriental scholars. During the last year the Academy has published thirty volumes and fifty-six memoirs, and has given subventions to twelve scientific reviews and four scientific publications. Its revenues in 1887 amounted to $97,618, and its expenses to $61,557. Its whole property amounts to nearly a million. Since its foundation in 1831, the Academy has spent more than $2,000,000, four-fifths of which have been voluntary gifts of private persons, only $224,000 having been contributed by the State; while during the absolutist period private gifts were forbidden by the Austrian Government. The Academy offers, during the next three years, thirty-one different prizes, chiefly relating to Hungarian history and literature, but two of which may be of interest to Hungarians established in America—a prize of 100 ducats on alcoholism, its consequences and its remedies, and one of 500 florins on the question of legal tender and the premium on gold and silver in America.

—The May Proceedings of the Royal Geographical Society opens with an interesting account of Suanetia, a district of the Central Caucasus, by Mr. D. W. Freshfield. The inhabitants, numbering about 12,000, have preserved their separate national identity since the time of the Emperor Augustus, and "may fairly be described as reverted pagans." They were converted to Christianity before the tenth century, and the country is still covered with small stone churches and chapels, "dating probably from the eleventh and twelfth centuries." But these have been closed, being used principally as treasure-houses, and containing chests in which are "the sacred books and images, some of them beautiful works of art, Persian silks, strange three-sided pieces of wood carved with old Georgian inscriptions, flint-headed spears and arrows," among other things. The priests have disappeared, and their place is taken "by an hereditary class of local elders, who superintended the funeral feasts and sacrifices." This latter ceremony is thus described by Prof. Kovalevsky: "One of the nearest relations of the deceased follows the body to the grave, leading by the horns a fat ox. Immediately after the burial the ox is killed, and the heart and liver are placed on a wooden platter. This is taken by one of the local elders (who are not consecrated or in any way recognized as priests by the Georgian Church), who lifts up the plate, using at the same time the following words: 'O God, accept this our sacrifice.'" They are said to worship the heavenly bodies, and some of Mr. Freshfield's porters appeared to pray to and praise the sun directly. In the discussion which followed the reading of the paper before the Society, Prof. Bryce, M.P., said that it was a "remarkable and almost unique fact" that "a

people who had reached the level of Christian monotheism should fall back into heathenism." It ought to be said that Mr. Freshfield does not make it quite clear in all cases whether he is describing a condition which has passed away or one still existing. He refers to some reforms introduced by the Russians in recent years, especially in restraining the robber proclivities of the wild mountaineers. To such an extent was freebooting once carried that apparently every hamlet has its stone tower-of-refuge from forty to eighty feet high, which forms a "strangely fantastic" feature in the landscape. The remainder of the paper is taken up with a description of the mountains and glaciers of this region, which the writer strongly recommends to vacation tourists and scientific students.

—Polybius has recently attracted much attention in scholarly England, usually averse to work in post-classic Greek. Mr. Capes, who is well known for his historical monographs, has published selections from Polybius under the title 'The History of the Achæan League,' in which he has tried to do justice with unequal success to the side of language and to the historical side; Mr. Shuckburgh has in hand a complete translation of the remains of the great "pragmatical" historian; and we have before us, arrayed in all the beauty of the Clarendon Press, Oxford, Mr. James Leigh Strachan-Davidson's 'Selections from Polybius.' These selections, we are told, comprise about a third of the remains of the author, and the gaps have been filled up by brief narratives in English. The prolegomena discuss a variety of Polybian matters without going very deep into any one, the most interesting being the short essay on the scene of the battle of Cannæ, which, like the appendix on the site of Carthage in Spain, has the unfailing charm of autopsy. The comparatively few notes are very thin, and consist largely of translations of easy passages. The beginner in Polybius, we must say in all candor, will learn much more from the unpretentious work of Mr. Capes than from the sumptuous and ambitious book of Mr. Strachan-Davidson.

RECENT FICTION.

Bonaventure. A Prose Pastoral of Acadian Louisiana. By George W. Cable. Charles Scribner's Sons.

The Story of Keedon Bluffs. By Charles Egbert Craddock. Boston: Houghton, Mifflin & Co.

A Phyllis of the Sierras, and *A Drift from Redwood Camp.* By Bret Harte. Houghton, Mifflin & Co.

The Argonauts of North Liberty. By Bret Harte. Houghton, Mifflin & Co.

Black Ice. By Albion W. Tourgée. Fords, Howard & Hulbert.

The World's Verdict. By Mark Hopkins, jr. Boston: Ticknor & Co.

An American Penman. From the Diary of Inspector Byrnes. By Julian Hawthorne. Cassell & Co.

Mona's Choice. By Mrs. Alexander. Henry Holt & Co.

A Life Interest. By Mrs. Alexander. Henry Holt & Co.

Wessex Tales. By Thomas Hardy. Harper & Bros.

A Castle in the Air. By Gen. Hugh Ewing. Henry Holt & Co.

A Man's Will. By Edgar Fawcett. Funk & Wagnalls.

John Ward, Preacher. By Margaret Deland. Houghton, Mifflin & Co.

THE noble simplicity of a life like Bonaventure's would be welcome from any hand. From Mr. Cable's it is doubly so; for, with the example of a worthy life full of sincerity, of elevation, and of sacrifice, made only the more lovely because of the unconsciousness with which it is given, one at the same time enjoys the pleasure of surrendering one's imagination to Mr. Cable's, and following the threads of his simple story, benefiting by his exquisite workmanship, his minute observation, and his artistic feeling, without a thought behind. It is a pleasure which is afforded one only too seldom in the fiction of the day. The number of writers now making novels whose work it is safe or at all possible to read with one's critical judgment left to one side, may be numbered on one hand. Even Mr. Cable has faults: refined and subtle as his humor is, to some he may seem a little over-fond of it. Though he imagines comprehensively, and observes with closeness and fidelity, it may justly be complained, nevertheless, that his imagination now and then strains a point, while at other times his faculty of observation has everything its own way. Yet, for all that, one cannot seriously find fault with the story of Bonaventure, or, rather, the cluster of stories growing out of his, and beautifully showing the breadth and power of influence which a simple, sincere, and high-minded man may wield. They are so unpretentious, so devoid of the claptrap and sensationalism which the public demands—and generally gets, one must sorrowfully admit—that a sympathetic reader is not only pleased by reading them, but also elevated and made better. This not alone because the stories are unaffected in their simplicity, and free from the taint of melodrama, of course, but because at the same time they are pervaded with a spirit of faith, a faith in the nobility of truth, however homely, in the beauty of unselfishness, however simple.

Mr. Cable's power of seizing on the points of a character, otherwise commonplace, and conveying along with the sense of its highest attributes the homely aspects of its environment, the every-day life of an untutored, unambitious people, and never once lapsing into sentimentality or bathos, is an invaluable one, especially when it is joined with the deep respect for his art which Mr. Cable shows in every turn. It is due to two things: the belief which the writer has in the things he places highest, and in his sense of humor. The one enables him to write sincerely, the other prevents him from writing foolishly. For the rest, his charm, his interest, his freshness—they come from his materials and his workmanship, rather than from his native power and talent. But, with these qualities all combined, he gives us stories for which we can freely feel thankful.

Miss Murfree's work cannot be complained of for lack of earnestness, either. The impression one forms after reading 'The Story of Keedon Bluffs' tends rather in the other direction—perhaps it is too serious. At least, its seriousness is unrelieved by any such delicate humor as so often saves Mr. Cable from coming to grief. There is a strong tendency noticeable in all Miss Murfree's writings to exalt the commonplace—a tendency which, when coupled with an equally strong one for forcing dramatic situations, is sufficient to destroy the effect of whole chapters of simplicity and uncouth dialect. One who meets the kind of people Miss Murfree writes of on an equal footing, and sees much of them, is finally forced into the belief that nobility of nature is not apportioned to the uneducated and superstitious in any greater ratio than to the rest of mankind, and that the coat and dialect of the rural laborer are not of themselves unfailing guarantees of honesty and manhood, any more than the dress and actions of a gentleman are signs of his rascality. Perhaps the qualities of character and truth, as well as of light and color, are only relative, after all, and one must make allowances for the degree of knowledge with which another acts, and for the force of their surroundings and traditions. One may reasonably expect more of *Colonel* Esmond than of Tom Jones, and one does. It is therefore a waste of effort, as well as a false straining of art, to attempt the illustration of the highest truths with characters for whom one must make allowances, and at the same time adhere to the "natural" method.

There is one American story-writer who is bothered with no limitation of art or questions of ethics, but whose sole province is to tell his tale and have done with it. Mr. Bret Harte probably writes "out of his head" as much as any novelist except the purely imaginative or the entirely sensational ones. His landscapes, naturally and completely as they are drawn, with all their briefness, are taken from only the most indistinct kind of memories, or from nothing at all, and his people come from anywhere and everywhere. It is true that they usually bring up on the Pacific Slope, and that they invariably have something interesting and amusing happening to them. There are enough surprises and complications, for instance, turned off in the short tale 'A Phyllis of the Sierras' to furnish many a writer with material for volumes. But we have seen nothing of late which can at all compare with 'The Argonauts of North Liberty' for brief directness, for sustained and exciting interest, or for subtle, strong suggestiveness. The story "tells itself," and in an hour's reading one compasses the entire existence of three persons by simply knowing how they acted at three important periods of their lives. There is no need for minutiæ or details; the drama is played, the curtain is rung down promptly, and one's curiosity is satisfied. The last sentence of the book completes the first chapter of the story, and the circle is finished. The tale is too neatly told, the coincidences aud contrasts are too effectively wrought, and the action too rapid and culminating to bear marring by abridgment. But if one cares for a story that is just simply a story, for characters that have nothing to recommend them but their human failings and passions, and can put up with a very small portion of wickedness which is never carried quite beyond the verge of respectability, one will surely read the history of Deacon Salisbury's daughter of North Liberty and her two husbands.

Judge Tourgée has finally written a novel which has nothing to do with politics or the "'question of the day." As the printed slip which the publishers so considerately provide says: "The book appears in a neat and attractive form, and will doubtless meet that welcome that Judge Tourgée's fictions are sure to find." But, after all, the book is quite unremarkable. There is one of Thomas Hardy's characters—a writer of reviews—who remarks that most novels are neither good enough nor bad enough for the purposes of reviewing. He would undoubtedly put 'Black Ice' in this category. For while the book contains a story with a certain interest, it is told in such an offhand way, so many of the characters play their part of padding out the tale in such a perfunctory way, the surprises are so lacking in the element of surprise, and so many things require long personal narrations to explain them,

that the effect is quite unsatisfactory. Mr. Tourgée writes vigorously, and, if one may say it, with abandon. He is not afraid to tackle a page or two of fine writing nor a harrowing situation now and then. But he fails to select and arrange his materials to a good enough advantage to secure an effective and uniform result.

But for a novel that is quite without a redeeming feature one is recommended to 'The World's Verdict.' It is unnatural, confused, and amateurish to the last degree. The scene is laid in Paris, and shifts to Nice; the characters are "Americans and otherwise," and the story, if placed at all, is to be classed as "international"—though that seems a very heavy epithet to apply to a piece of work so unimpressive and lacking in promise.

Mr. Julian Hawthorne is treading close on the heels of other writers of detective stories, both in the popularity and in the volume of his productions. The books that have come from his pen and the diary of Inspector Byrnes are not distinguished as much from the common bank-robbery and mysterious-murder cases as the reputations of the two men would lead one to expect. 'The American Penman,' indeed, is almost a complete disappointment. Perhaps even in detective stories ingenuity alone is better than half facts and half fancies.

'Mona's Choice' and 'A Life Interest' show the facility with which Mrs. Alexander can write a three-volume novel about nothing in particular and a good many things in general. They are chiefly remarkable for this, and for the astonishingly hazardous way in which the writer will plunge her stereotyped heroines into unheard-of difficulties and complications, and the providential avenues which always open for their escape. It is impossible for one who writes so much to avoid repetitions, both of characters and situations as well as of tricks of style and diction. Mrs. Alexander is far from doing so; but she succeeds on the whole in giving enough color and individuality to her works to enable one to recall the main points of a story from its title without too much of an effort.

When a man deliberately says that he prefers the insipid little crab-apple to the fine-flavored and fully developed pippin, it is tolerably safe to conclude either that he is devoid of taste or that he enjoys opposing the general opinions of mankind from what is called "pure cussedness." And a somewhat similar conclusion must be reached in regard to the reader who deliberately prefers the short story, which must necessarily depend for its interest almost entirely on incident, to the full-fledged novel, in which the author has space and opportunity to elaborate those psychological studies which have made certain novels great and memorable books. Nor can the writer who has in times past shown abundant capacity for dealing with all the subtleties of the novel of character, be regarded as blameless when he voluntarily abandons that higher plane, and seeks the easier successes that attend the novel of incident.

On a certain well-known occasion the "Thunderer" fell foul of Thackeray because he had written the 'Kickleburys on the Rhine.' The criticism was badly worded and in bad taste, and the irritated author was consequently enabled to make a telling reply; but, nevertheless, the critic was, in the main, right. What he intended to say was, that the man who had written 'Vanity Fair' ought not to have wasted his time and his brains on the 'Kickleburys.' To no human beings does "noblesse oblige" apply with so much force as to the author and the artist. Having once struck a high level, they owe it to themselves and to their reputation to avoid anything that may tempt them to

> "Seek baser plaudits and a meaner prize."

And, inasmuch as Mr. Hardy has reached the front rank of living novelists by reason of his command of language and his ability to delineate the fine shades of character, it becomes a solemn duty to protest against his wasting his time on 'Wessex Tales.' This protest having been entered, all that remains to be said is, that the tales are well told, that they are full of delightful pictures of rustic life in the west of England during the early part of the century, and that they will aid the reader who is satisfied with incidents, "strange, lively and commonplace," to pass a pleasant evening.

'A Castle in the Air,' though the history of a lawsuit, might be called a military novel because of a certain soldierly directness in narration, and of the bristling march of incidents which, wholly without comment, make up the story. It reads as if one in boots and saddle, weary of life as portrayed in the modern novel, its complexities, subtleties, and analyses, its love and its tea-tables, had dashed off his facts and written his finis and pursued his ride, like a well-conducted person. The result is, a collection of more or less interesting legal incidents of which, unfortunately, the more entertaining come first, a quite irrelevant collection of details relating to a ghost and a bundle of papers, the recital of a vast amount of plotting and cheating—a story unsatisfactory as a whole, but not without interest in parts, a style defaced by inaccuracies and provincialisms, but direct and crisp to the point of crackling. There is an approach to individuality in the persons and language of Sam and Mirandy, a blustering coward and a masterful young woman. Otherwise, the characters are mainly lay-figures draped in circumstantial evidence. The introduction of ghosts and sulphur into a novel written in the dust of law offices and tied up with red tape, has a curiously incongruous effect, and suggests a wonder whether the story may not have been the inspiration of a nightmare produced by reading the reports of a recent *cause célèbre*.

Inasmuch as Mr. Fawcett has lent his brain and pen to the cause of temperance, he is to be applauded; and inasmuch as he has made a repetitious and dreary novel, he is to be forgiven. Some day, perhaps, the novel will be written which shall do for temperance what 'Uncle Tom's Cabin' did for anti-slavery, what 'Nicholas Nickleby' did for the cause of kindness. Perhaps, till Fiction has set her mighty engine in motion, Philanthropy will lack her best ally. All honor to Mr. Fawcett for the attempt, failure though it is. His story, to begin with, is tiresome where it should be terrible, and mincing where it should be passionate. His characters are wooden, his atmosphere too laboriously that of the Élite Directory, his style cursed with adverbs, pompous and viscid. To call it an empty book would be to deny its authorship, as well as to question its ability or its strength in parts. That it will help the cause it pleads is unfortunately improbable; that it will be widely read for its interest as a work of fiction is, we should suppose, impossible.

In 'John Ward, Preacher,' the author has given a picture of that *rara avis*, a logical Calvinist. Any real Calvinist is at this hour rare; one who accepts the full consequences of his faith always has been. John Ward believed in the damnation of the heathen, and more, in the damnation of all who disbelieved in damnation—of all who, to quote one of his elders, were not "grounded on hell." This is also professedly the belief of thousands to-day, yet who eat, drink, and are merry. John Ward believed, suffered, crucified himself, and fell a martyr to his faith at his own hands, in a fashion logical, but hardly natural. One must admire the sublime acquiescence and loyalty of his wife; yet, in following her course, it is impossible not to feel that the alloy of a little natural self-assertion furnishes a necessary working quality in the imperfect affairs of humanity, and that Helen Ward was nearly as great a foe to domestic peace from one extreme, as were, from the other, Psyche and Elsa of Brabant. John Ward's concerns, however, are not the only, perhaps not the main, interest of the book. The village of Ashurst supplies some charming scenes of country life, drawn with the tender grace and quaintness in which the poet of 'The Old Garden' dipped an earlier pen. Dr. Howe's figure is an especially individual one. He is the genial rector of the village, whose theology is wholly perfunctory, whose kindness of heart is wholly real. It is as impossible not to be fond of him as it is to feel that in any crisis he would prove a stronghold. Mammon has no temptations for him, but common sense has, in situations where common sense is a blunder, or at least a crime. About the village spinsters and the elderly village bachelor, and the loves and rivalries and incompleted lives of Ashurst, hangs an old-time fragrance, as of a grandmother's rose-jar; but only a modern novelist (or a Greek poet) could have stated and left unsolved so many questions touching on tragedy.

RECENT PHILOSOPHY.

The Sensualistic Philosophy of the Nineteenth Century. By Robert T. Dabney, D.D., LL.D. 8vo, pp. 415. A. D. F. Randolph & Co.

Introduction to the Study of Philosophy. By J. H. W. Stuckenberg, D.D. 8vo, pp. 419. A. C. Armstrong & Son. 1888.

The Ethic of Free Thought. By Karl Pearson, M.A. 8vo, pp. 446. London: T. Fisher Unwin. 1888.

The Religious Sentiments of the Human Mind. By Daniel Greenleaf Thompson. 8vo, pp. 176. Longmans, Green & Co.

Dr. Dabney does not embody the characteristics we require of a philosopher. He seems to have begun life with certain conceptions, perhaps obtained from the Westminster Catechism, which he has apparently resolved never to modify. No discoveries of science will move him, and he decides the merits of a doctrine solely by its consequences to some preconceived conviction which had been adopted only upon authority. He has two pigeonholes for all philosophers—one for the "sensualistic" and the other for the "a priori." The sensualistic school is the object of the most irreconcilable animosity—*est delendum*. Locke is held responsible for all the philosophic heresies that have come into the world since his time; and Spencer, Huxley, Darwin, Mill, Bain, and this school generally are refuted by proving them disciples of Locke, and then triumphantly repeating the old platitudes against his system. The author has a mortal antipathy to any man who lays stress upon sensations. The defence of his own position is very much as if he had been born to know things without any sensational experience at all. In distinguishing between sensations and intelligence, he does not realize that he is dealing with abstractions. If he had read Green's 'Introduction to Hume,' or was at all acquainted with modern psychology, he would not have committed such a mis-

take. But he discusses the problem as if intellectual activities were as independent of the sensible as visual is independent of tactual experience. Hence his persistent anathemas against every real or apparent approach to Lockian doctrine.

Now, we have no admiration for that philosophy. But we think it time to stop making a bugbear of it, and to allow its unfortunate author some relief from assault. The issues of life or death for present thought are hardly involved in the mould of two centuries. Philosophers are no longer seriously alarmed by attacks upon "innate ideas." Kant has taught them that there is no necessary antithesis between "empiricism" and "a-priorism," and they have begun to settle down at the problems of the present and the future, with no disposition to accept the verdict of the past as final. But the work under notice has the appearance of opposing every advance of the last hundred years merely because the author cannot reconcile the results of progress with the conceptions of his childhood. It can find circulation and support only among those who want something to quote in favor of doctrines they are unwilling to modify. The discussion of Positivism and Evolution is much after the style of the newspaper assaults upon them when they first appeared—much more characterized by passion than by reason. Of course in a book of 400 pages some true things ought to be said, and many sharp things are said. But they are as generally irrelevant as their spirit is provoking, and hence they convert nobody. We maintain that philosophy is nothing unless it makes men candid and reasonable.

We are glad to remark a complete contrast with the foregoing in the work of Dr. Stuckenberg. It must command the respect of all schools of thought. It is not a philosophy, nor a psychology, nor a book to defend any particular system of metaphysics. It is simply what it purports to be, an "introduction" to the subject. In this respect it supplies for teacher and student alike a much-felt want. The problems and relations of philosophy are clearly analyzed and set out before the student, so that he may gain some familiarity with its questions without having to plod through too many original systems or their history. But the most commendable feature of all is the truth-loving spirit of the author, and his resolution to encourage justice to theories which he does not accept. He does not conceal from himself, or from the student, that there are questions to be considered which may issue in very greatly modifying the views we have inherited from tradition.

We have no space to say much of the contents of the 'Introduction.' There are four chapters which discuss in their order the Theory of Knowledge, or Noetics, Metaphysics, Æsthetics, and Ethics. In that on noetics there are some interesting and even important remarks upon the relation of evolution to the question about the origin and the nature and validity of knowledge. The chapter on ethics is perhaps the ablest in the work, and may have been made so by the commanding interest which the present age is showing in that subject. The relation between utilitarianism and the imperative "ought" of Kantian fame is admirably adjusted, so that the student can approach the subject with Bacon's maxim as a motto: "Read neither to contradict and refute, nor to believe and take for granted, but to weigh and consider." The bibliography and list of subjects for "reflection," attached to each chapter, are very valuable.

The 'Ethic of Free Thought' is conceived in a negative attitude to the theological spirit, and attempts to throw light upon some pressing questions of the day. It is not a treatise upon ethics, but a series of essays having a general connection with religious and moral problems. It is interesting to notice the calm and, perhaps, impertinent assurance with which the author affirms the obsolete character of the "Christian verities." He says in the preface: "I set out from the standpoint that the mission of Freethought is no longer to batter down old faiths; that has been long ago effectively accomplished, and I, for one, am ready to put a railing round the ruins, that they may be preserved from desecration and serve as a landmark." But then, when we come to notice the influences which have determined his conception of religion, they are found to be the mysticism of such men as the scholastics, and Spinoza, Maimonides, Eckhart, etc., and certain insoluble speculations in metaphysics. He here evades some vital elements of its ethics. Nevertheless, the author's spirit is decidedly positive, and it is refreshing to observe a freethinker present something more than iconoclasm as the fruit of his labor. The book is worth our notice mainly as an indication of tendencies which are increasing in force, and which all social and moral efforts have to reckon with in the reconstruction of our beliefs. It is a little erratic, and betrays a want of unity that is desirable in such a work. Besides, there is more sympathy with metaphysical speculations about the nature of the universe than is required of one who is going to discuss some practical problems.

The chapter on Luther is depreciative of the man, and holds him up in a very bad light; but Mr. Pearson is not more one-sided than is usual with admirers of the Reformer. The discussions of most value are those upon Sociology in Part third of the work, which include "the moral basis of socialism," "the woman's question," and "socialism and sex," and are the most interesting of the five chapters. The second of these subjects is an expansion of some views advanced by John Stuart Mill, and its importance is made very clear. It is maintained that the social and political independence of woman, by which the ideals and activities of her life shall be as extensive as those of man, will produce, in a perfectly moral way, one of the checks so much desired by Malthus to limit the growth of population. Socialism is, of course, taken in its better sense, and the economic problems occasioned by large industrial operations and the concentration of wealth, with their concomitant of unequal distribution, are handled in an earnest and scholarly manner. Speculative theologians and philosophers need more acquaintance with such subjects, even if they must obtain their information from the much-abused freethinker.

The last work under notice needs only brief mention. It is but another illustration of the spirit and tendency embodied in the work of Mr. Pearson, although it does not attempt to discuss practical problems. The usual doctrines of philosophic theism, religious beliefs, and ethical codes are examined, but pronounced upon from the position of a freethinker. Science and naturalism are the author's deities, and we meet again an influence which theology seems powerless to counteract.

Social History of the Races of Mankind. Second Division. Oceano-Melanesians. By A. Featherman. London: Trübner & Co. 8vo, pp. xxxii, 420.

MR. FEATHERMAN'S book is a valuable summary of what the principal voyagers in the Pacific Ocean, from the time of Capt. Cook to our own day, have reported concerning the manners, customs, and traditions of the brown Polynesians, and of some other races; for the work is somewhat heterogeneous in its scope. The brown Polynesian tribes are twelve in number, and all of these are here described, except the Cook's Islanders, for whom space should have been found. The work might well have been restricted to the brown Polynesians proper, and the distinct races inhabiting the Pelew, Caroline, Marshall, Marion or Ladrone Islands, and Madagascar in the Indian Ocean, elsewhere treated of. Mr. Featherman's class of Oceano-Melanesians is defensible; but any one who knows the brown Polynesian well will recognize his physique, his language, and his customs as constituting a type that distinguishes him almost or quite as clearly from other Melanesians as the Spaniard is distinguishable from the Englishman.

The characteristics of these extremely interesting and fast-disappearing barbarians—their arts, their dress, their amusements, their creeds, their moral character, their governments, their religions, their superstitions, their physical traits, their sexual usages, their poetry, their history—all are here set down with care and fulness. Special pains have been taken to preserve the records of these different communities as they were first observed by the earlier voyagers, with which are given, by way of contrast, sketches of their present condition. Nothing is more remarkable, or more clearly brought out in this concordance of the facts, than the unity of the brown Polynesian race in all essential respects. The customs, the character, the language, and many of the traditions are the same from Hawaii to New Zealand, and from the eastern Fijis to Waihu (Easter Island), a stretch of 5,000 miles in one direction, and 4,000 in the other. The writer has stepped ashore upon Cook's Islands, after a voyage of 3,000 miles due south from Honolulu, and conversed with the Aitutakian in the Hawaiian tongue.

Especially interesting are the materials that are here brought together for the comparative study of character and customs throughout this vast expanse of island groups. In no other part of the world is sexual morality so archaic. Only in the Samoan Islands and in Rotuma is the least value set upon female chastity, at least in the unmarried. In general the brown Polynesian girl has equal liberty with the men, and disposes of herself as she pleases, continence on her part being usually reproached as "stinginess." After marriage—so called, for marriage in all these communities is but a slight and impermanent tie, usually dissoluble at the will of either party—after marriage the woman is held to chastity as long as the relation lasts; but a relaxation of the marriage bond, with the entire consent of the husband, is frequently made in favor of foreigners, or of domestic visitors of rank. No other publication known to us gives such a full and interesting conspectus of the marital and sexual usages of the Polynesian. Infanticide and cannibalism are also touched upon, though with less fulness. These topics, indeed, the Polynesian generally shows unwillingness to discuss with foreigners, being restrained by their severely critical attitude towards the practices in question—an attitude, it may be added, which the foreigner has not usually taken in regard to the sexual freedom of the South Sea Islanders. Charles Darwin found difficulty in collecting the data upon infanticide that were needed for his work upon the 'Descent of Man.' But in all social inquiries which turn upon sex, the

essential data are usually the hardest to obtain.

As to the missionary work and influence in Polynesia, Mr. Featherman takes a view which is undoubtedly correct, namely, that while the introduction of Christianity among the Polynesians was a well-intended work, and usually sincere on the part of the missionaries, if not on that of the Boards, none the less it has been a potent factor in the disintegration of the Polynesian race. The Easter Islanders, for instance, are now reduced to 150 in number, and are great thieves, but they "are most adroit in making the sign of the cross in the orthodox fashion." These natives, like other Polynesians, have passively consented to accept the creed which the missionaries profess.

The chapter upon the Hawaiians is full and excellent, though it is marred, like the rest of the book, by innumerable typographical errors in the Polynesian words. The defect is inevitable in any work of this sort, unless the proofs are read by a Polynesian scholar. It is unfortunate that the publishers did not secure the services of Mr. Stephen Spencer of London in this task, one which he performed admirably for Judge Fornander's work on 'The Polynesian Race.' Mr. Featherman cites—with approximate accuracy—the following curiosity of the Hawaiian language, one which could be easily matched in any other of the Polynesian dialects; it is a sentence composed entirely of vowels: "'*E i ai oe ia ia e oo ia.*' Literally translated, this means, 'Speak to him now that he may learn.'"

Should another edition of the book be called for, we would suggest more frequent references, in the shape of foot-notes, to Mr. Featherman's varied sources of information, of which, we must not fail to add, he is himself an intelligent critic.

Yankee Girls in Zulu Land. By Louise Vescelius-Sheldon. Illustrated by G. E. Graves, after sketches from life by E. J. Austen. Worthington Co. 1888. Pp. 287, 8vo.

THE brighter, sunnier side of life in South Africa has rarely if ever been more charmingly described than in this little volume. It is life, also, in its most varied aspects, not simply as seen in the older settlements of Cape Town and Port Elizabeth, but also in Kimberley and Pretoria. The young travellers visit an Englishman's ranch, and they board at a Boer's farm, and never appear to be more comfortable than when camping out on the desert plains of the Free State. They use every mode of conveyance, steamer, railway, coach, and ox-wagon, and show a very decided preference for the wagon. The object of these extensive wanderings is health—one of the three ladies being an invalid—and this is found in the dry and bracing atmosphere of the Transvaal. It is this fact, possibly, which leads the diarist of the party to write so enthusiastically of the Transvaal, not only as the most interesting country which they visited, but also, "with its undeveloped mineral wealth, its rich soil, the game which abounds there for the hunter, and, above all, with its glorious climate, the country of the future of South Africa." If all its towns were like Potchefstrom, there would probably be no dissent from this opinion. This place was "like a large orchard, so abundant are the fruit trees. Every street is a boulevard of orange and peach trees, which here grow side by side. The very hedgerows are figs and quinces, while everywhere may be seen grapevines, lemons, shaddocks, and bananas. Between the sidewalk and the street is a well-kept grass plot, with a stream of clear water running in the midst of it." Our travellers' experience of the health-giving qualities of the air of the uplands, especially when breathed from an ox-wagon, was not solitary. Among the passengers on the steamer which brought them to Africa "were two brothers, and one was so ill that we never expected to see him again in this life," but he turns up at Bloemfontein, "the picture of health, entirely owing, he said, to the wonderful effects of the climate" and six months in an ox-wagon. Natal, with its singularly beautiful coast and fine rolling, grassy plains, not unlike English downs, a genial land in which nearly everything seems to grow, was second only to the Transvaal in interest. At its capital, Pietermaritzburg, with its imposing public buildings and its lovely vine-clad villas surrounded by cactus hedges and camellia trees twenty feet high, with a theatre at which English operas are "as well mounted and sung" as in London, was found "much more social life . . . than in any other South African town."

With a stay of several months at this place ended the pleasant African life of our author and her sisters, and we close the book with as much reluctance as they finally turned their back upon the scenes amid which they had enjoyed so much. It should not be presumed, however, that Miss (or Mrs.) Vescelius-Sheldon entirely ignores the disagreeable part of travelling in South Africa, the long, wearisome coach-rides, and the wretched fare at the way-side stopping-places, the terrific thunder-storms, the strangely oppressive loneliness, of which all travellers speak; these are all apparent again and again, but only as inevitable discomforts to be made little of. The illustrations, apparently from drawings by one of the three "Yankee girls" (reproduced by the process with which recent French works have made us familiar), are admirably in harmony with the sprightly narrative, being, at times, like that, full of humor, and, in the case of the Zulu in the cactus bush, on page 272, unusually fine. The book, which is a very attractive specimen of typography, is disfigured by too many verbal errors, especially in the spelling of proper names. It lacks also even the meagre table of contents which one expects to find in every book.

An Elementary Treatise on Kinematics and Dynamics. By James Gordon Macgregor, M.A. Macmillan & Co. 8vo, pp. xvi, 512.

THIS is, in many respects, a remarkable book. It is, as Bishop Whately was fond of saying, "paradoxical yet true," that the work is full of novelties, yet contains little that is new. It is a treatise on Mechanics, taking that word in its widest signification, as including the whole theory of both motion and force. The work is elementary in so far as it does not assume the reader's knowledge of mathematics to extend beyond Algebra, Geometry, and Trigonometry; but one who has previously studied Analytical Geometry and the Calculus will read the book with incomparably less labor than one who has not.

Professor Macgregor does not use the word "Mechanics" at all, and, though his own work is the best possible evidence of the essential unity of the two subjects of which it treats, he suggests no other name in its place. Many modern writers on Mechanics, especially English writers, have, more or less completely, adopted the division of the science into two branches—"kinematics," which treats of motion without reference to the forces by which it is produced; and "kinetics," which treats of the action of force. Professor Macgregor adopts this distinction, but, for some reason which he does not explain, he retains the old term "Dynamics" in place of "Kinetics." For reasons which we have no space to explain, it would have been much better, if "Kinematics" is adopted, to take "Kinetics" also. The time-honored division of Mechanics into Statics and Dynamics the author rejects, regarding Statics as only a part of Dynamics. The distinction between Statics and Dynamics, though still maintained by even the most recent writers (see the works of Minchin and Greaves) has long been more formal than real; the true relation of the two was most elaborately and clearly explained, more than half a century ago (1830), by Comte in the first volume of his 'Philosophie Positive.'

Professor McGregor's book is full of new terms and expressions, new definitions of old terms, new names for old notions. Most of these have been suggested or proposed by other modern writers, but many seem to be of his own invention. Thus the expression "tubes of force" (p. 26 *et seq.*), we do not recollect having seen. At first sight the expression irresistibly suggests the idea of "putting up" force as dealers in artists' materials do paints. The word "velocity," which is used most frequently in scientific language in the same signification as in ordinary conversation, is superseded by the word "speed," and, by a new definition, is restricted "to a more complex conception." The result is that a point may frequently move with very great speed and very little velocity. So, for the usual signification of the word "acceleration" we have the phrase "rate of change of speed," or, more succinctly, "change of speed," the old word again being restricted "to a more complex conception"; at the same time the author says regretfully: "It is desirable that a name should be invented for the phrase 'rate of change of speed.' Hayward has proposed the term *quickening*" (p. 29). Why he does not adopt it the author does not tell us.

But with all its peculiarities we strongly recommend the work to the perusal of all those engaged in teaching Mechanics. It is evidently the product of long and careful labor and thought, by one who thoroughly understands his subject. It takes a very comprehensive view of the science; everything is presented in a strictly scientific form, and it leaves on the reader's mind a strong impression of consistency and unity of plan. Its constant use of the method of limits forms an excellent introduction to those portions of the science in which the employment of the calculus becomes indispensable. A very good index adds to the value of the work.

William of Germany: A Succinct Biography of William I., German Emperor and King of Prussia. By Archibald Forbes. Cassell & Co.

William I. and the German Empire: A Biographical and Historical Sketch. By G. Barnett Smith. Chicago: A. C. McClurg & Co. 1888.

WELL-REGULATED newspaper offices are provided with biographical notices of distinguished men who are expected to die at any moment; and in the case of a man like the late Emperor William, whose great age had for some years past made him a shining mark for death, it is but natural that professional book-makers should lie in wait with biographies differing from newspaper articles in little but their length. The two books named at the head of this notice are favorable specimens of this class, and although both of them are useful and readable manuals of interesting information, it is hardly to be

expected that either will survive to attain any rank in the world of literature.

Mr. Forbes's book has the dash and picturesqueness of treatment which one expects from so famous a war correspondent. It is, as set forth in its title, a succinct biography, and leaves impressed on the mind of its readers a vivid picture of its hero, who is the central figure of the canvas, the historical accessories being merely accessories and nothing more. Along with the qualities of good newspaper work, the book has the attendant defects of style: it is disfigured by slang, some of it Carlylean of a particularly offensive brand, and some the ordinary British reporter's jargon. The publishers seem to regard the book as a mere catchpenny affair; they do not even put a date on the title-page, and, while the print is large enough and leaded, the whole physiognomy of the book is anything but attractive.

Mr. Smith's work is, as its title indicates, fuller and more ambitious; its mechanical execution is much more satisfactory, and, although bearing a Chicago imprint, it is of unmistakably English workmanship, besides being provided with an index. It is not only a biography of the Emperor William, but also a history of Germany since his accession. It has the great merit of not attempting to distort or conceal facts in the interest of its hero, and its plain narrative of events sets forth in a glaring light the unjustifiable and arbitrary course of Prussia in the war against Denmark in 1864, as well as the uniformly absolutist policy of the late Emperor. The brilliant achievements of the German armies in 1866 and 1870, however they may dazzle the generation that witnessed them, should not blind us to the many questionable methods which led up to and accompanied them. Such methods may be condoned by success, but they are not thereby justified. In the general patriotic chorus of praise of the Emperor William which his death awoke on both sides of the ocean, it is perhaps too much to expect a cold view of the actual facts from a German writer; hence Mr. Smith's book possesses a value beyond what its literary merits would confer.

Life of Walter Harriman. With selections from his speeches and writings. By Amos Hadley. Boston: Houghton, Mifflin & Co. 1888.

With all respect to the memory of Gov. Harriman and to the devotion of Mr. Hadley, we feel obliged to pronounce this book singularly devoid of interest. Those who were personally acquainted with Gov. Harriman will doubtless read it with pleasure, and those who care to follow the details of the State politics of New Hampshire will find here some information; but the book can be recommended to no others. The style is very little better than that of the ordinary correspondence of the country newspaper, garnished with quotations of colloquial English, and the substance is eulogy of the most undiscriminating character. Quite as indiscriminate is the collection of speeches, editorials, letters, etc., with which the book is padded. There are Thanksgiving proclamations and Fourth of July orations, Gubernatorial messages and political documents, and newspaper comments upon them all. There are even lists of the places where campaign speeches were to be made, and, what is most remarkable, Mr. Hadley actually prints the letters of recommendation which Gov. Harriman procured when seeking to be appointed Naval Officer at Boston. Lest this should not be enough, there is added a condensation of the book of travels which he wrote after his return from a visit to the Old World.

In spite of all this, it is possible to see that Gov. Harriman's life was in many respects a typical one. His early history resembled in its vicissitudes that of most of our self-made men. He was a farmer's son, then a teacher, then a Universalist preacher, then a merchant, and from a very early period a politician. He was a Democrat, but upon the outbreak of the war he loyally supported the Administration, raised a regiment, and did good service in the field. He became one of the most popular stump-speakers in New England, and though his speeches are not very readable, they must have been effectively delivered. He was twice Governor, and declined a renomination. His career, as traced in this biography, was manly and upright, and it is, after all, satisfactory to reflect that it is inconspicuous only because of the number of similar careers.

Elements of the Comparative Grammar of the Indo-Germanic Languages. By Karl Brugmann. Vol. I. Introduction and Phonology. Translated from the German by Joseph Wright, Ph.D. B. Westermann & Co.

The significance of this masterwork of Brugmann for the progress of science is to be measured, not so much by the new material it contains, nor by any definite settlement of long-disputed questions it may offer, as by its complete control of the entire existing material of the science, by its deftness in assorting it, and its priceless clearness in the statement of results. It represents the complete triumph of an orderly mind over the most distracted material. Seldom are united in one man as in the author so comprehensive and exactingly thorough an acquaintance with the detail of his subject, and so fine a sense for the relation of the part to a scheme of the whole.

That there existed a need for the book there can be no doubt. The fourth and latest edition of Schleicher's 'Compendium' was so far behind the times at the date of its appearance (1876), that the editors, Leskien and Schmidt, declined to essay any revision. The German edition of Brugmann's book appeared late in 1886, and has, by common consent, proved itself to be both an indispensable hand-book for the specialist and a convenient and eminently reliable resource for students of the related disciplines. A good English translation is therefore welcome. In a book of this kind, where the accessibility of the fact, and not the style of presentation, is of first importance, an English buyer will always prefer a good translation to the original.

We have before us a good, but by no means an excellent, translation. The rendering is faithful, and to a fault. The translator nourishes, fortunately, no ambition to better the author. He takes him as he is, for better or for worse—idioms and all. The German peers through many a phrase, stares barefaced through some; cf. "fall together with" (*zusammenfallen mit*), where 'be merged with' is meant; "occurs opposite to" (*steht—gegenüber*); "partly underwent contraction for—, partly, etc." (*theils verschmolzen — theils*). Many a barbarous "already" testifies to an ill-digested "*schon*"; cf. page 131, "dropped out already in primitive Baltic-Slavic"; page 175, "The nasal was often unwritten already in the oldest inscriptions." "After" is often a bad rendering of "*nach*," as, "The explosives after their form of articulation"; also "beside" for "*neben*." The German prototype is unmistakable in the future of, "κλόνις will also belong to this category" (*auch wird gehören*). On page 291 there is a curious mistranslation of *auch* ("also" instead of even); "Lat. *c* had the pronunciation *k* also before *e*- and *i*- vowels down to the Middle Ages."

In the difficult matter of finding equivalents for the technical terms, our translator has had, in general, good success. "Vowel-gradation" and "vowel-mutation" seem to be now accepted renderings of *Ablaut* and *Umlaut*, though the general method of our language in framing technical terms would have been better represented by "apophony" and "metaphony." The term "sonant" has been much used in this country and in England, *e. g.*, by Whitney, as the opposite to "surd"; our translator uses it as the opposite to "consonant," while "voiced" is his equivalent for *tönend*. This is justifiable. "Primitive" is only a half rendering of *ur-*, as in *urgermanisch;* "proethnic" is better. "New formation" does not translate *Neubildung;* 'neologism' is the word.

In spite of such blemishes, the translation seldom gives occasion to a positive misunderstanding of the original. The proof-reading has been carefully done. Minor errors of the original have been corrected, and slight additions made by the author.

BOOKS OF THE WEEK.

NEW BOOKS.

The Ex-Emperor of Germany.

Two Royal Lives.

Gleanings at Berlin from the lives of their Imperial Highnesses the Crown Prince and Princess of Germany, late Emperor and Empress. By DOROTHEA ROBERTS. With numerous portraits and illustrations. Large Crown 8vo, cloth, bevelled boards, gilt tops, $2.25.

The Margravine of Baireuth and Voltaire.

By Dr. George Horn. Translated from the German by her Royal Highness Princess Christian of Schleswig-Holstein, Princess of Great Britain and Ireland. 8vo, cloth, $3.00.

Uniform with 'Memoirs of Margravine of Baireuth,' etc. The correspondence (published for the first time) between the Margravine of Baireuth and Voltaire.

The Memoirs of the Margravine of Baireuth.

Translated and Edited by H. R. H. Princess Christian. In 8vo, cloth extra, $3.75.

The Margravine was the sister of Frederick the Great, and exerted great influence over his character. Her Diary is a wonderful narrative of the petty intrigues and gossip of the German Court.

The volume has as frontispiece an autotype copy of the portrait in Berlin.

The Story of an African Farm.

A Novel. By Ralph Iron (Olive Schreiner). 12mo, cloth, 75 cents.

*** A remarkably strong book.

Scientific Religion;

Or, Higher Possibilities of Life and Practice, through the Operation of Natural Forces.

By Laurence Oliphant. 8vo, cloth, $6.40.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

SCRIBNER & WELFORD, 743–745 BROADWAY, N. Y.

Beginning of a New Volume.

Scribner's Magazine

FOR JULY CONTAINS:

Feats of Railway Engineering.

By John Bogart, State Engineer of New York, whose article is a natural complement to Mr. T. C. Clarke's account of the "Building of a Railway," which appeared in the June number. Mr. Bogart describes many of the great works which have given American Engineers so high a reputation for daring and ingenious achievements in railway building. The paper is illustrated by more than thirty beautiful engravings.

THE RAILWAY ARTICLES,

which have already scored a great success, will be continued by a paper in August by Mr. M. N. Forney, on "American Locomotives and Cars," a paper in September by Gen. Horace Porter, on "Railway Passenger Travel," and others. Of this series the New York *Times* says:

"The railway series which is begun in the June number of *Scribner's* promises to attract new attention to this admirable periodical. There is not in American industrial life a topic which could possess a wider interest or which affects more directly the every-day experience and observation of men and women."

Other Contents in July Number are:

POPULAR AUTHORS. By Robert Louis Stevenson.

AN ASTRONOMER'S SUMMER TRIP. By Charles A. Young.
With illustrations from photographs made by the American Eclipse Expedition of 1887 to Russia.

LIFE AND TRAVEL IN MODERN Greece. By Thomas D. Seymour.
Illustrated from original drawings by F. D. Millet and others.

HENRY JAMES contributes the second part of his novelette 'A London Life.'

FIRST HARVESTS. Chapters XXI-XXIII. F. J. Stimson.

MAESTRO AMBROGIO. A delightful short story by T. R. SULLIVAN.

GETTYSBURG. A Battle Ode. George Parsons Lathrop. Passages from the poem to be read before the Society of the Army of the Potomac, at Gettysburg, on the twenty-fifth anniversary of the battle, July 3, 1888. With a head-piece from a battle-sketch by W. H. Shelton.

SOLITUDE (poem). Arlo Bates.

DEATH AND JUSTICE (poem). Graham R. Tomson.

MID-SUMMER (poem). Allan Simpson Botsford.

OF THE JUNE NUMBER THE CHICAGO *TRIBUNE* SAYS: "IT IS A TREASURE WORTH PRESERVING AS A MODEL OF WHAT A POPULAR MAGAZINE SHOULD BE AND COULD BE IN AMERICA IN THE YEAR 1888."

25 Cents a Number, $3.00 a Year.
